### "SIMPLICITY" STUDENT LAMP.

A One Hundred Candle-Power Light for Six Hours' Service One Cent. The illuminant is gasoline, stored in compartments in the lighting fixtures, and on passing through a heating chamber reaches the orifice in the form of gas, which burns with a smokeless flame under a mantle heated to incandescence. The light is not affected by temperature, and will burn equally well in summer or winter. The lamp uses 74° stove gasoline, and is started by heating the burner with a small alcohol torch, supplied with each light. There is no odor like the old gasoline stove.

These lamps have been approved by the Board of Underwriters of Chicago.

Covered by eight patents in the United States and Canada. Ask for catalogue of complete line of lamps and our

# CHATILLON SPRING SCALES.

OUR attention having been called to the fact that inferior makes of Spring Scales are being sold to butchers as "Chatillon" Scales, we deem it due to the trade and to ourselves, in order to protect the merits of our Spring Scales, so well and favorably known for more than sixty years, to inform you that every Spring Scale manufactured by us

has our name as makers plainly on the dial, thus:

and any scale without this name on the dial is NOT A GENUINE CHATILLON SCALE.

## FOSTER BROS.' BUTCHER KNIVES, CLEAVERS, STEELS, ETC.

These Tools are recognized in the Markets, Packing Houses and Abattoirs throughout the United States as the standard of excellence, quality being the first consideration. ## BRILLIANT SELF-MAKING GAS LAMP.

Brilliant as Sunlight and Nearly as Cheap as Daylight.

Everybody can have good light; **PURE, STEADY INCANDESCENT.** BRIGHTER than **ELECTRICITY** or **GAS**, CHEAPER and SAFER than **KEROSENE**.

The one reliable lamp that is always right and ready for use, never out of order, and will be just as good in 10 years from now.

Portable and convenient. **ABSOLUTELY SAFE.** Anybody can run them. One quart filling gasoline burns 18 hours requiring no attention. No wick, smell or smoke.

More Brilliants used than all the others combined. Accepted and approved by the Insurance Companies.

Money saved by their use will soon pay first cost.

The Brilliant is sold direct from manufacturers of 35 years' experience making lamps. Write for illustrations and prices. Agents Wanted.

NEW YORK, 79-81 John Street. CHICAGO, 189 Fifth Avenue.  
For sale in Philadelphia by Frank S. De Ronde Co., 48 N. 4th St.

# HARDWARE

At the September meeting of the Board of Governors of the Hardware Club of New York, the following gentlemen were unanimously elected to membership in the club:

WILLIAM D. ZEHNDER, Scranton, Pa.  
W. J. McMANNIS, Wilmington, Del.  
CHARLES W. PUSEY, Wilmington, Del.  
FRED. H. SMITH, Providence, R. I.  
WILLIAM E. DAVIS, 85 John Street.  
HENRY WHITE, 141 Broadway.  
M. W. FAITOUTE, 11 Broadway.

We learn from the secretary-treasurer of the National Hardware Association—and he ought generally to be pretty good authority—that a mistake was made in announcing the date on which the next convention of that imposing body would occur. Instead of the date announced, it will be on Wednesday, November 21st and the two days following. We hope in our next issue to give some of the details governing this important gathering of the clans.

The Enterprise Mfg. Co. of Pa., Philadelphia, Pa., are sending handsomely engraved cards to their customers and the trade generally, making the following announcement: "We take pleasure in announcing that we have been awarded the Gold Medal at the Paris Exposition for the excellence of the goods of our manufacture. Respectfully yours, The Enterprise Mfg. Co. of Pa., Philadelphia, U. S. A., September, 1900."

The Ogden Mfg. Co., Newark, N. J., whose advertisement will be found in this issue, and for whom W. H. Quinn & Co., 103 Chambers Street, New York, are the general sales agents, are meeting with great success in the placing of so many of the Ogden Automatically Regulated Door Checks in various public buildings. In addition lately to the Prudential Building, Newark, their check has been accepted by the United States Government, and upwards of one hundred have been ordered in consequence for the new Immigrant Building, now receiving the finishing touches, which is located on Ellis Island in New York Harbor.

J. S. Conwell, for so long a time identified with the interests of the American Bicycle Co., as general manager, at their Waverley bicycle plant, Indianapolis, Ind., has departed from that sphere of his usefulness, having been elected president and general manager of the Wilke Mfg. Co., Anderson, Ind., who make a specialty that is fast growing popular, of porcelain refrigerators. This company will shortly issue a new catalogue of their wares that should be asked for.

The first annual automobile show will be given in Madison Square Garden, New York City, November 3 to 10, inclusive, commencing on one Saturday night and ending on another. This exhibition will be given under and by authority of the Automobile Club of America, which represents the same society element which is recognized as fostering and encouraging the Horse Show. The automobile industry will be represented by the leading makers, whether using gasoline, steam or electricity as motive power. It is stated that the spaces in the amphitheatre and gallery surrounding it have been almost entirely taken, and the management have been compelled to provide additional space on the ground and main floor.

In referring in our previous issue to the catalogue recently issued by the Morse Twist Drill and Machine Co., New Bedford, Mass., we inadvertently stated a discount sheet was intended to accompany the catalogue. As known to most of their patrons, we were in error, their invariable rule being to make trade quotations only upon application.

The old New York firm, known for so long a period under the name of Pope & Stevens, although Mr. Pope has been dead for many years, has been succeeded by the firm of Walter B. Stevens & Son, Mr. Stevens having given an interest in the business to his son, who has for some time been actively engaged in the business with him. The business of manufacturing dog collars and other furnishings, together with ice skates, and acting as New York and Pennsylvania sales agents for Barney & Berry's skates, will be continued at the old addresses, 114 Chambers Street, New York, and 412 Commerce Street, Philadelphia, Pa.

Bommer Spring Hinges are in the lead at Paris, taking the Gold Medal. This gratifying action was to be expected, as the well-known house of Bommer Brothers of 257 to 271 Classon Avenue, Brooklyn, N. Y., are ever at the front in their particular line. They have made a life study of Spring Hinges, to the exclusive manufacture of which they confine themselves, and make a Spring Hinge deserving of the worldwide recognition shown by the unanimous verdict of the Exposition Jury.

The Pelouze Scale & Mfg Co., Chicago, Ill., have recently appointed J. C. McCarty & Co., 10 Warren Street, New York, the general selling agents in this city for both domestic and export trade. This well-known manufacturing company, as will be noticed in their advertisement in our columns, manufacture an extensive variety of household, counter, market, candy and postal scales, spring balances, etc.

The retail Hardware merchants of Montreal, Quebec, on September 19th organized a local association with the following officers: Francis Martineau, president; David Drysdale, first vice-president; L. J. A. Surveyer, second vice-president; Alex. Prudhomme, treasurer; Arthur Magnan, recording secretary, and Frederic Lariviere, corresponding secretary. The executive committee consists of J. Ernest Milles, E. Cavanagh, P. B. Desforges, F. Martineau, A. Prudhomme, W. Granger, O. Cauchon, L. Sylvestre, O. J. Beland, E. Belanger, S. Lecours, R. Kerr and A. Marceau.

United States Commission  
to the Paris Exposition of 1900,  
20 Avenue Rapp.

Hardware, Hardware Publishing Co., New York:

GENTLEMEN—I have the honor to inform you that, in accordance with the official announcement of awards at the Paris Exposition of 1900, a Grand Prize was bestowed upon the exhibit of the United States journals, publications and periodicals, and that you are therefore entitled to use this award of Grand Prize. Respectfully yours,

A. S. CAPEHART,  
Director of Liberal Arts and Chemical Industries.  
Paris, August 31, 1900.

# HARDWARE

VOL. XXII

OCTOBER 10, 1900.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

The office of the Hardware Publishing Company has been removed to Broadway Chambers, Nos. 273-277 Broadway, New York.

## Editorial Trade Review.

The weather has been too warm during the past fortnight to see any pronounced activity on sales of genuinely Winter season goods. Stoveboards, snow shovels, skates, ice chisels and even stoves and stove fixings are hanging fire, as far as a full season's orders are concerned. No general dullness is anywhere noticeable, however, for sales are reported as keeping up admirably, although the size of the orders indicate low stocks, with greater demands looming up in the immediate future for goods, the volume of which sales will show better in dollars and cents on sales books as the season advances. Some goods

are reported as being offered at abnormally low quotations, and it would cause no marked surprise if higher prices should prevail after election.

There has been no great difference during the fortnight past in the conditions of the general market. The orders still continue of a character indicating caution as to quantity, and giving evidence of a desire on the part of the buyer to even up his average stock and be prepared for the requirements of the sanguine purchaser who desired prompt shipment of his order, or cancellation. The lower values that are noticeable in several lines, especially among heavy Hardware specialties, would seem to be responsible for some of the hesitancy shown by wide-awake buyers.

The more considerate quotations announced on Builders' Hardware have had a very beneficial effect on this important branch of the industry, and have stimulated the jobbers to renewed effort in the placing of good orders, and to the advantage of the general activity. The Fall and Winter seasons are usually prolific of inside requirements from architects and builders on houses in course of construction during the Summer, and orders for the stated requirements can now be made advantageously. The demand in this especial line is good in almost every section where prosperous conditions are not interfered with by the enforced idleness following strike methods. It was a wise move on the part of the makers to change the prevailing idea that prices were prohibitive of good orders by naming a scale of quotations generally believed to be fair and considerate, with the certainty of orders following such a satisfactory announcement.

It is worthy of notice that the changed conditions governing the markets now, compared with the prevailing prices for Spring trade, have been effected with so little disturbance in the trade generally, and with but little comment as to comparisons of loss on account of decline. The big values of last year were perhaps so seldom realized, the stocks on hand suffered but little under such radical changes, some of which were on paper only.

By comparison with other goods in which pig iron and manufactured products do not present so great a difference in margin of profit, complaint is frequently made that shovels, wire nails, axes and several other lines which are protected in price by strong combination or trust conditions are still held at exorbitant prices, in which the only conditions entering are steady demand and swelling profits.

Orders for skates are kept back by the unusual warm spell which has dominated the weather for a fortnight past. Indications point to a skate famine if weather should prove of seasonable fridity between Thanksgiving Day and Christmas, as the makers are disinclined to heap up stocks in the absence of direct and definite orders so customary on this line of goods and the dealers, between the present atmospheric conditions and advanced quotations for this season's production, feel as though they were compelled to steer between Scylla and Charybdis with a primitive compass.

There seems to prevail a lessened degree of interest in political matters. No doubt seems to exist as to the possible outcome of the approaching election, by which the present administration will be continued, and contrary conditions form no part of the speculative anticipations of the future. Business will be closely attended to by those interested in its successful outcome, and the

voter will emphasize his opinion by his vote, but the politician and his engrossing and engaging manner may go hang.

### Death of Frederick N. Stanley.

Frederick N. Stanley, president of the Stanley Rule and Level Co., New Britain, Conn., died at his home on September 27th, his death resulting from an operation for appendicitis. Three days previously, while at his office, he became ill and went home, the operation being performed on the day previous to his death. His funeral took place from his residence the following Sunday. Among the honorary pall bearers were William H. Hart, president of the Stanley Works; George J. Loughton, president of the Russell & Erwin Mfg. Co.; William Bishop, of P. & F. Corbin, and A. W. Rice, of the Union Mfg. Co. Associated with the above were a number of other prominent members of the clubs and companies with which Mr. Stanley had affiliated. Workmen from the factory of the Stanley Rule and Level Co., each representing one of its several departments, were the active bearers.

Frederick N. Stanley was born in New Britain March 17, 1844. His father, Henry Stanley, was one of the founders of many of the industrial plants which make New Britain noted. He enlisted in the Civil War when a young man of seventeen years, and served throughout its entire duration, being mustered out as a lieutenant of Company C, Thirteenth Regiment Connecticut Volunteers. Nearly his entire business career was passed identified with the interests of the Stanley Rule and Level Co., having in his earliest connection with the company been elected secretary. At the time of his death he was also a director of the Russell & Erwin Mfg. Co., Stanley Works, Union Mfg. Co., New Britain Gas Co., National Spring Bed Co. and the Mechanics' National Bank. He was a member of the New Britain Club, the Loyal Legion and the Soldiers and Sailors' Monument Committee, being actively identified with all of them.

In his social and business relations Mr. Stanley has ever been held in the highest esteem, those intimate with him referring with pride to his elevation of character, his excellent habits and strict fidelity to the highest principles governing an honorable career, inspired by generous impulses and undeviating integrity.

### Death of Charles S. Landers.

Charles S. Landers, head of the firm of Landers, Frary & Clark, cutlery manufacturers, died at New Britain, Conn., on Thursday, October 4th, the cause of death being heart failure following an operation for appendicitis. He had been sick since only the Saturday previous, and it was thought the illness was brought on by overexertion at golf. He was born in New Britain June 8th, 1846, and entered the manufacturing business in 1862. He married in 1869 the only daughter of Loren F. Judd, and leaves a son, George M. Landers. In addition to his connection as president of Landers, Frary & Clark, he was president of the North & Judd Mfg. Co., a director in the New Britain National Bank, and also the Savings Bank, a director of the New Britain Institute, a director of the New Britain Hospital, vice-president of the Y. M. C. A., and a member of the New Britain Club, having been at one time its president. He was a member of the South Congregational Church, and was greatly interested in the City Mission. He was a prominent member of the American Protective Tariff League, having participated in every discussion before the Tariff Committee in Washington having reference to the protection of American cutlery. Mr. Landers was well known to the Hardware trade, and was a distinguished manufacturer in his line of business. He was quiet and unassuming, scarcely realizing the influence he wielded and the position he held among his fellow men. He was an independent thinker, and was among the first of leading manufacturers to protest

against maintaining too high a tariff, and to advocate a gradual reduction as justified by improving conditions. He was full of public spirit, and was always ready to help forward whatever he believed was for the benefit of the community, being known to a large circle of friends as a fine type of the best Connecticut citizenship. Every one who knew him recognized in him the honorable gentleman. He was held in universal respect by every one with whom he came in social contact. As an evidence of how highly he was esteemed by the cutlery industry, every cutlery manufacturer of any prominence was represented at his funeral, which took place on Saturday, October 6th.

### Imports of Manufacturers' Materials.

The activity of American manufacturers is illustrated by the statistics of the imports of manufacturers' materials and exports of manufactured goods, which have just been made public by the Treasury Bureau of Statistics. In the eight months ending with August, 1900, imports of raw materials for use in manufacturing amounted in round numbers to 200 million dollars, against a little over 100 millions in the corresponding months of 1896, and the exports of manufactured goods were 304 million dollars, against 163 millions in the corresponding months of 1896. Thus in both importation of raw materials for use in manufacturing and in exportation of the finished product, the figures of the present year are nearly double those of 1896.

The total imports of the eight months just ended exceed by 93 million dollars the imports of the corresponding months of 1896, while the single item of manufacturers' materials itself shows an increase of 87 millions. Raw materials for use in manufacturing formed in the eight months of 1896 but 23 1-2 per cent. of the total imports, while in the corresponding eight months of 1900 they formed 35.2 per cent. Manufactures formed in the eight months of 1896 28.7 per cent. of the total exports, and in eight months of 1900 formed 33.8 per cent., and in August, 1900, 35.2 per cent. of the total exports of domestic products. In 1896 the average importation of manufacturers' materials was 13 1-2 million dollars per month, and in 1900 it is 25 million dollars per month.

The following table shows the imports of principal classes of manufacturers' materials in the eight months of 1896 and 1900, respectively:

	Eight months ending Aug. 31, 1896.	1900.
	Dollars.	Dollars.
Hides and skins.....	13,176,281	36,961,011
Chemicals and drugs.....	31,242,599	35,583,840
Silk, raw.....	8,732,863	24,615,716
India rubber, crude.....	9,346,858	19,938,630
Fibers.....	8,932,806	19,771,035
Wool.....	15,555,557	15,809,909
Tin in bars.....	3,524,883	13,136,739
Tobacco, leaf.....	8,458,961	5,740,411
Cotton, raw.....	4,552,252	3,387,976
Furs.....	1,989,115	4,767,077
Wood.....	10,942,987	9,435,192

The following table shows the principal exports of manufactures in the eight months of 1896 and 1900, respectively:

	Eight months ending Aug. 31, 1896.	1900.
	Dollars.	Dollars.
Iron and steel.....	29,957,090	87,174,389
Oils, mineral, refined.....	37,328,246	45,635,660
Copper and mfrs. of.....	17,872,807	41,830,330
Leather and mfrs. of.....	12,635,353	17,697,762
Cotton manufactures.....	10,782,956	15,263,167
Agricultural implements.....	4,007,772	13,854,774
Chemicals.....	5,889,797	9,188,129
Wood manufactures.....	5,037,265	7,899,857
Scientific instruments.....	1,762,855	4,171,561
Paper and mfrs. of.....	1,861,868	4,503,766
Tobacco manufactures.....	3,037,251	4,033,145
Cycles.....	2,449,260	2,517,717

Houses are made incombustible in Russia by painting with a solution of aluminum sulphate followed by one of potash. Sulphate of potash is formed and insoluble alumina is precipitated in the pores of the wood.—*Ex.*

The Spanish import duties paid during the first six months of the current year exceeded by 55,000,000 pesetas those for the corresponding period of 1899.—*Ex.*

## LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law,  
No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 277 Broadway, New York City.

QUESTION.—Kindly answer the following questions through the columns of your paper: First. If I place an order in May for shipment on August or September 1st, 30 days net, must I pay for goods on October 1st, even if the goods are not here? Second. Should I pay drayage? Third. Should retailers come together and form a combination, only buying from first-class houses?

REPLY.—As we understand the terms of sale, where goods are sold as described above, "30 days net" refers to payment 30 days after the shipment has actually been made and does not refer to the date specified in the order. The goods in reality have not been delivered; we would therefore advise that, in our opinion, you were not obliged to pay for the goods until 30 days after their delivery. As to whether or not you should pay drayage would depend upon the terms of sale in question as to this particular point. In the absence of any express terms in the contract or any custom affecting the question, we are of the opinion that on a sale, such as has been described, the purchaser would pay the drayage. Third. If the retailers can form a successful combination which would be beneficial to them for the purposes suggested, we see no objection to their doing so.

QUESTION.—I have leased a store for a number of years. I have occupied it for about two years, and my lease has three years more to run. I have recently learned of a store which I could obtain at less rent and which is in a better locality than the store I occupy at present. Kindly inform me whether my landlord could sue me for the rent for the remaining three years of my lease if I should leave the premises I now occupy, and, if so, whether the landlord can attach my money in the bank and my goods in the store.

REPLY.—If you vacate the premises in question and fail to pay rent for the unexpired term of your lease the landlord would have a cause of action against you for the amount of rent for that period of time. If the landlord obtained a judgment against you he would be able to reach your money in the bank if he could ascertain its whereabouts, and could also satisfy his judgment out of any goods not exempt owned by you.

QUESTION.—I own a house and lot in Newark, N. J., and my wife owns some property outside of the city. I have had a good offer from a party in Newark to buy my house and lot, and I wish to sell it. My wife, however, does not wish me to sell it, and says she will not sign a deed of the premises. Is it necessary in New Jersey for the wife to sign the deed when her husband owns the property? Could I sell the property without my wife signing the deed? Could my wife sell her property without my consent?

REPLY.—In New Jersey the wife's right of dower is recognized, and a married man cannot defeat his wife's right of dower against her will or without her consent. If, however, you could find a purchaser willing to buy the property, subject to your wife's dower right, you could sell it and give a good title to the same, subject, nevertheless, to the dower right of your wife, which consists of an estate for her life in one-third of the property. If your wife owns real property in New Jersey, and there has been issue born alive of your marriage, you have the right of courtesy in your wife's real property, which she cannot defeat by her conveyance any more than you can defeat her dower by the conveyance of your lots. Many States have abolished this estate of the husband in his wife's realty, and some States, such as New York, have modified the estate by allowing the husband courtesy in only so much of his wife's property which, at her death, was undisposed of; but New Jersey still follows the common law doctrine, and the consent of the husband is necessary to the wife if she desires to convey a free and clear title to her property in that State.

QUESTION: Kindly answer the following question: A man died having made a will devising one-half of the real estate and one-quarter of the personal property to his wife and the balance of his estate to his children. Could the wife refuse to accept the terms of the will and demand her one-third life estate in the real property and one-third of the personal property, which she would have been entitled to had her husband made no will, leaving the other two-thirds of the estate to be divided between the children, thus practically setting aside the will?

ANSWER: In a case such as you describe, where a person died having made a will devising one-half of the real estate and one-quarter of the personal property to his wife and the balance of his estate to his children, the widow would be at liberty to refuse to accept the terms of the will, so far as they sought to defeat her right of dower in her husband's property. A man cannot by his own act defeat his wife's right of dower in all the real property in which she has an estate of inheritance during marriage. The most he can do is to make a devise to his wife in his will in which he can provide, that if she accept, it must be taken in lieu of dower. The wife, therefore, has the privilege either to accept or to refuse to accept the devise and take her dower in the property. The wife has one year in which to make her election. As to the personal property, however, the same rule does not apply. A widow under the circumstances referred to, where her husband dies intestate, has the right to one-third of the personal estate; but if her husband dies leaving a will, the statute has no application whatever, and she will receive only so much of the personal property as is bequeathed to her in the will.

QUESTION: My father died March 2d, this year, and the will was admitted to probate this year, April 17th, father appointing me his executor in conjunction with a certain trust company. As I understand from the company, I receive no money until the year is up. I have been sick for the past month and unable to make a living. Will you kindly state how I can get any money to support my family through this Winter?

ANSWER: It is not quite clear from your question whether you refer to the time that you will be able to receive your commissions as one of the executors of your father's estate, or whether you refer to a legacy to be received by you under the will. The settlement of an estate generally takes a year or more, and the payment of legacies cannot be enforced earlier than a year from the date of the granting of the Letters Testamentary. The reason of this, however, is to allow ample time for advertising for the creditors of the deceased, as the debts must be paid before the legacies. If you are able to convince the trust company, which acts as your co-executor, that the deceased has no debts or that the assets of the estate exceed the liabilities, the trust company might be willing to consent to the payment of your legacy without waiting for one year to expire.

## When was Coke First Made.

In answer to this question, *Ironmongery* (Eng.) says: It is difficult to decide when it was first made, but not difficult to fix the time when it was commercially produced. John Evelyn, in his diary, writes under date 1664: "Came home by Greenwich ferry, where I saw Sir John Winter's new project of charring sea coal, to burn out the sulphur and render it sweet. He did it by burning the coals in such earthen pots as glassmen melt their metal in, so firing them without consuming them, using a bar of iron in each crucible, which bar has a hook at one end, so that the coals, being melted in a furnace with other crude sea coals under them, may be drawn out of the pot sticking to the iron, whence they are beaten off in great half exhausted cinders, which, being rekindled, make a clean, pleasant chamber fire, deprived of their sulphur and arsenic malignity." It was not until the year 1818 that the London Gas Light Co. sold the coal thus charred and freed from tar, and gave the name of "coke."

## ITEMS OF INTEREST FROM EVERYWHERE.

Handles of knives and forks are utilized for the storage of salt and pepper under a new patent, each handle being formed of a tube, which has spring clips to hold it on the shank; and has an internal reservoir for the salt and pepper, which is shaken through the ends.

The manufacture of cast steel in India can be traced back for over 2,000 years, while there are also examples of wrought iron work nearly as old. Near Delhi, close to the Kutub, there is an enormous wrought iron pillar which weighs ten tons and is thought to be over 1,800 years old.

Every horse in the English army is numbered and has a little history kept for it. The number is branded on the animal's feet—the thousands on the near hind foot and the units, tens and hundreds on the off hind foot. Thus the horse whose number is, say, 8,354, will have an 8 on his left hind foot and 354 on the right foot.

A new cartridge, claimed by an Italian electrician to be an effective substitute for dynamite and smokeless powder for mines and heavy ordnance, contains a mixture of carbonate of potash and chloride of ammonia. While the mixture is ordinarily harmless, the passage of an electric spark sets up electrolytic action, giving a violent explosion.

The corn crop along the Missouri River is very heavy and large, many of the farmers realizing more from their cobs than they do for the corn, as the former are in demand for making tobacco pipes. Factories for making them are becoming numerous. Washington, Mo., is the original home of the corn cob pipe, "Missouri Meerschaum," and boasts of four factories devoted to that industry.

A manufacturing firm in Hamburg has recently brought out nails of vulcanite or ebonite for use in electrical work and in places where iron nails are not available. The vulcanite nails are not attacked by oxidation or chemical agents, and can be used in the form of hooks for hanging electrical conductors. They are also intended to be used in laboratories and in connection with the manufacture of explosives.

A striking commentary on the growth and success of the International Correspondence Schools is shown by the fact that whereas seven years ago their postage was barely 5 per cent. of the total receipts of the Scranton, Pa., postoffice, it is now one-third their postage, amounting to over \$5,000 a month. As \$1 would pay the postage of fifty letters, this shows that their monthly mail amounts to 250,000 letters sent out, and their annual mail to 3,000,000 letters.

A German firm has recently brought out a type of incandescent lamp which can be set in advance to burn a given number of hours and then automatically extinguish itself. In the base of the lamp is fixed a copper tube containing a central part of copper wire and filled with a solution of sulphate of copper. A current is arranged to pass through this solution from the wire to the tube, so that a continual electrolytic solution of the wire takes place. As soon as the wire is all dissolved the current is broken and the lamp goes out. The size and length of the wire may be set for any given number of hours and the lamp thus becomes automatic in its action.

It is probable that the metric system will be introduced before long in Russia; the bill which has been prepared to this effect by the Minister of Finance has received the approba-

tion of the State Council, with the understanding that the University and the various scientific societies will give their assistance in the verification of the weights and measures necessary for commercial use. The details have been nearly all decided upon, and will be submitted to the Council in the near future. Since 1896 the metric system has been used by the medical service of the army in the compounding of formulas, this having been made obligatory.

Herr Schneider, of Strassburg, has brought out a new substitute for gutta-percha, which is favorably reported upon by the polytechnic institute of that city. No information has yet been given as to the composition of the material. In ordinary temperature, it is hard, like pitch, and fairly firm against pressure, but not brittle. It does not break when hammered, even at freezing point; in a warmer atmosphere the mass softens. Thin plates kept in sea water at 34° F. did not lose in weight in a fortnight, nor did the water take up anything by solution.

A diamond circular saw for cutting stone is said to cut hard sandstone blocks at the rate of five feet per minute. The saw has dovetailed recesses in which are fitted steel blocks, each containing a diamond. A hole is drilled into the block, but stopped before running through. A diamond is dropped into the hole, and a steel wire-peg driven in behind it. The block is then put in an electric welding machine, and when it is softened, pressure is applied until the diamond is exposed, and the sides are milled to fit the dovetailed recesses in the saw. The positions of the diamonds in the blocks vary, so as to enable the saw to clear itself in making the cut.

A French scientist, M. A. Dufour, has succeeded in constructing a thermometer for high temperature by employing quartz. For a long time quartz, or rock crystal, was regarded as a matter which could not be melted or softened, but the English physician, Dr. Boys, succeeded finally in softening to a paste with a flame of oxyhydrogen. M. Dufour based his experiments on this fact, and finally succeeded in making tubes of quartz for his thermometer. In this instrument the bulb and tube of quartz are similar to those of an ordinary mercury thermometer, but the metal inside is tin. The scale runs from 240 to 580 degrees. As quartz cannot be softened at a lower temperature than from 1,000 to 1,200 degrees, it would be possible to make a thermometer which would register 900 degrees. The points taken for grading the new thermometer were the boiling points of mercury and sulphur respectively. The instrument gives the most precise results.

More than \$15,000,000 worth of the old-fashioned paper currency is outstanding, and though some of it has doubtless been destroyed, the bulk of it is held by collectors and private individuals. Every now and then some old person dies, and the heirs, finding a quantity of the "shinplasters" in a disused pocketbook or some other hiding place, send them to Washington to be redeemed. Occasionally, too, banks forward quite a lot of the notes in unbroken sheets, just as they got them many years ago. At first these sheets had to be cut apart with scissors, but afterward they were perforated like postage stamps, so as to be torn apart. Not long ago the Treasury received a handkerchief full of this currency, of the first issue, each note being signed by Treasurer Spinner with his own hand. About \$3,000 worth of this fractional paper comes in for redemption each year, and some of the best of it is saved out by the department to be given away in response to applications by collectors.

### National Sewing Machine Co.'s Increasing Plant.

In our issue of March 10th last we had the pleasure of giving our readers some brief statistical information regarding the immense plant of the National Sewing Machine Co., of Belvidere, Ill., which at that time covered a ground area of 10 1-4 acres, and contained 8 1-2 acres of factory floor space, in which was installed a plant containing 1050 machine tools of various kinds, five steam engines of an aggregate horse power of 1500, and employed a force of over 1900 men, and represented a maximum output of 1000 sewing machines per day.

The plant as then described was not only one of the largest, but certainly one of the best and most completely equipped of its kind, and had grown to its large dimensions within eleven years. It would seem, however, that the prosperity which always follows a good business, properly handled, has already rendered this very large plant much too small, and within the past three months the company have purchased nearly nine acres of additional ground, giving them a total ground space of a trifle over nineteen acres.

On a portion of this new land is now being erected a series of large additional buildings, commencing with a foundry building 500 feet long and 90 feet wide, equipped with two cupolas and connected with core ovens, sand rooms, coke storage building, etc., aggregating 50x90 feet.

Adjoining the foundry, at its centre, and running at right angles with it, is a one-story building 65x225 feet, used for tumbling and grinding and japanning departments. Beyond this is an immense new four-story warehouse and shipping building, 275x80 feet, this building alone having a floor space of 90,000 square feet, which, added to the 45,000 feet of the foundry and the space of the smaller buildings, gives an immediate net addition to the available floor space of more than 3 1-2 acres, and making a total of 11 4-5 acres of floor space for the entire plant.

These additions provide room for the employment of 450 more hands, making a total of 2300 for the entire plant.

In connection with the above described new buildings are also being erected new engine room and boiler room, in which are being installed a battery of modern water tube boilers and a Corliss compound engine of 750 horse power. For the boilers a large brick stack of 175 feet in height is being erected, and for the new buildings above enumerated there have been laid over 900 feet of additional railroad sidings, making a total railroad trackage in the plant of 2900.

Upward of \$65,000 worth of new machinery, much of it special, has been ordered, and is being built ready for installation in the buildings as soon as they are completed. All of the work on the buildings is being pushed with utmost vigor, and it is designed to have everything complete and in working order on January 1st next. The forceful explanation for the reason for vigorous pushing of this work is found in the fact that the entire force of the present large factory is now compelled to run nights to keep up with the demand.

It isn't often that *Hardware* has the opportunity to describe to its readers a rapid growth of such magnitude for any industry, but the significance of the above described additions are only made more clear by the statement that they are really only preliminary to still greater extensions and additions which are to be built in the Spring as soon as weather conditions permit. At that time a complete woodworking plant, with a main building 400x80 feet, four stories high, will be erected, together with necessary smaller buildings to constitute a complete plant for all of the sewing machine cabinet work used by the company.

When this plant is completed it will be by all odds the largest manufactory of family sewing machines the world ever contained, and *Hardware* hopes to have the pleasure of presenting its readers with description and illustration of the entire plant when completed.

### Rules for College Bred Men.

Dr. Edward Kirk concludes an article on college bred men in manufacturing establishments, recently contributed to the *American Manufacturer*, with the following rules, which he guardedly says may lead to the successful management of men in mechanical pursuits if the man has the ability to be a manager:

1. Learn to control your temper under all circumstances.
2. Cultivate a manner of address that will win the respect of the highest or lowest of workmen.
3. Be firm and polite in demeanor, and an ardent student of human nature, that you may win the respect of all men.
4. Cultivate executive ability, and never give up until you have accomplished the end in view.
5. Be sure you are right before you go ahead; it is better to abandon a theory or hobby than to make a failure of it.
6. Be temperate in habits and language.
7. Treat all workmen under your charge with due respect in and out of the shop; but never make companions of them, either out of or in the shop.
8. Always remember that you do not know it all, and cultivate the habit of learning from the workmen under your charge, and others, all you can without exposing your ignorance.
9. Learn to apply such knowledge without giving others credit, and to improve upon it or present it in such a way that the man from whom you obtained the knowledge would not recognize it as his own, and give you credit for knowing more than he did.
10. Never try to instruct a workman how to do a job you do not know anything about; first find out if the workman knows how to do the job, and if he does not, give it to another who does, and learn from him how it is done, so you may be able to instruct another.
11. Strive to get the largest possible amount of work done, and well done, by each man, and look after the interest of your employers in all things, for you are employed to make money for your employers, and if you cannot do it, they will not require your services very long.

### New Catalogue of Fishing Tackle.

Enterprise Mfg. Co., Akron, Ohio, have issued recently the most extensive catalogue of fishing tackle manufactured and controlled by one concern that has been brought to our knowledge. It is of a large size, 9x12 inches, oblong, and covers their extremely important line, manufactured solely by this company, of Pflueger's luminous artificial fish baits and other anglers' specialties, including trolling spoons, American spinners, hard and soft rubber phantom minnows, frogs, crawfish, grasshoppers, insects and every variety and pattern of bass, salmon and trout flies. Included in its contents will be found a large line of rods, reels, hooks to gut and gimp, line spreaders, minnow gangs, furnished lines, floats, sinkers, etc., etc. These goods are all handsomely illustrated throughout the volume, being printed on excellent coated paper so that the veriest tyro could readily select a line of fishing tackle that would add largely to his sales from this catalogue alone. The above company have recently purchased the machinery, stock, tools, good will, etc., of the American Fish Hook Co., New Haven, Conn., which they intend moving and adding to their factory at Akron, Ohio. This will add largely to their facilities for supplying this class of goods, which will be found advantageous for the progressive development of the interests of the company. The catalogue includes several pages devoted to illustrating a number of phenomenal catches of fish from photographs sent by sportsmen all over the country, advertising in each instance the advantages of using luminous bait. The several pages make an extremely appetizing display, and provide persuasive reasons why "luminous bait" should be largely represented in a general stock of anglers' supplies.

## CONSULAR COMMERCIAL COMMENTS.

### 1 UNITED STATES SAMPLE ROOM IN ZURICH.

I take pleasure in informing the Department that a practical way of introducing American goods into Switzerland has at last been evolved, and will be carried into execution in the near future. The writing of letters, distribution of circulars, etc., is useless in foreign trade. An agent, understanding the business habits of the people and the kind of goods desired, must be on the ground in person, not only for a day or two, but all the year round. Zurich is the commercial center of Switzerland and a sample room here will be of great advantage to American manufacturers.

Mr. W. A. Steinmann, a native of Switzerland, who has spent six or seven years in the United States—a practical and successful business man—is willing to devote a few rooms as sample apartments for American goods, and to exhibit them to the best advantage. I prefer to give his own language as to his plans and intentions:

"In May next, I shall move my present business into buildings which are much larger—so large that they would be sufficient to make a beginning in the above-mentioned business. I have four traveling clerks and five agents that go to every corner of Switzerland. Therefore a beginning would be made with little additional expense, and if I should not succeed there will be little lost. However, taking the matter in hand as I am used to doing trade, I am sure that I can build up a business worth having. The name of the firm would be 'First American Import House for Switzerland, Zurich,' general manager, Wm. A. Steinmann. Naturally, it would have my personal guaranty and responsibility. I shall take the general agency for the whole of Switzerland of the most powerful and largest manufacturers (not merchants) in the United States; they must all be A1 firms that can compete with any one in the United States, and they must agree not to enter into business relations with any other firm in Switzerland. They are to send me all the samples required to give a clear idea of their article, free of charge and delivered to my store. I shall not confine myself to any special line of goods, but will handle all salable articles, such as chemicals, wood, leather, shoes, tools of all descriptions, Hardware and machinery, metals, minerals, food stuffs, inventions of all kinds, etc. I agree to open a large and fine exhibition of samples, to advertise them extensively, and to introduce the goods into our markets. My sales at the beginning would be on commission, and the manufacturers would have to ship their goods to the buyers with direct invoice, as the new firm will not take any responsibility for pay; but being a business man who knows the financial standing of almost everybody, and having 5,000 customers in my own business, loss is absolutely excluded. The firms that I represent as sole agent in Switzerland must accommodate themselves more or less to the customs prevailing in our country if they want to succeed, i. e., they will have to sell three or six months' time against draft. The great mistake American exporters make is that they always want to be paid cash. All European exporters to the United States give trustworthy firms credit, and that is what the latter will have to do, too, in order to establish a large foreign trade. It is the custom of this country."

Such a course as outlined above is the only proper way to introduce and sell goods in Switzerland. I trust that our manufacturers will meet the requirements.

A. LIEBERKNECHT,  
Consul.

Zurich, August 23, 1900.

### A NEW WAY TO INCREASE OUR EXPORTS.

In my replies to inquiries from manufacturers in our country as to how to gain foreign markets for their products, as also in my reports to the Department, I have impressed upon our exporters the necessity of personally studying the wants of foreign markets; of meeting the usual terms of credit, time and place of delivery, standard of weight and measure: of knowing the language of customers; of combination in foreign trade, etc.

There is another mode which promises splendid returns for

those employing it, which will also stimulate our export trade. This consists in establishing American department stores in the large European cities.

In Germany and most other Continental countries there are large retail warehouses and stores which sell different lines of dry goods and clothing for female wear. Department stores on the order of our own, containing almost everything for human needs, are hardly known here. Consequently one finds in a European city hundreds of retail stores, carrying small stocks and selling articles at high prices. I think department stores would find conditions more favorable here than at home, in amount of sales and return on the capital invested; but the importance of the plan consists in the immense impetus they would give to the sale of American specialties—household articles of all kinds, clothing, kitchen and ironware, small machines, tools and instruments, toys, carriages and vehicles, office and dwelling furniture, fruits and meal, etc. I am confident that such a concern established in Frankfort could within a few years sell American specialties alone to an amount of \$3,000,000 to \$4,000,000 annually, and distribute further quantities by giving agencies to leading dealers of interior towns and cities. In shoes alone it could transact a large trade. Our manufacturers need then but offer their products to the home-purchasing office, in order to do a foreign trade.

SIMON W. HANAUER,

Vice-Consul-General, Frankfort, August 31, 1900.

### MARKET IN FRANCE FOR MEASURING TOOLS.\*

The market in France for the sale of steel rules, caliper gauges, and graduated scales is an open one—that is to say, it is not controlled or regulated by any particular house or syndicate. There is, in my opinion, a good opportunity for the introduction into France of this class of American-made tools; and the Americans, with their extensive and practical knowledge and the improved methods they use in manufacturing their goods, should be able to command the lion's share of the trade.

The only competitors worthy of notice are the Germans, who, by their geographical position, their imitation of American patterns, and their ready adaptation to French requirements, have gained an important position in the French tool market. Americans, however—with their much greater mechanical ability, not to mention their up-to-date machinery and the cheapness of raw material in the United States—if they would show an equal readiness to comply with foreign requirements, would have very little difficulty in outdistancing their German rivals.

Of course the scales must, in every case, be metrical, as no other system of measurement is used in France. In this respect, at least, the French lead the way; and it is to be hoped that America will not be long in following suit, as no one can dispute the fact that the metric system excels all others in simplicity and practical usefulness. Its general adoption by all countries is to be greatly desired by those who wish to foster and extend the commercial and industrial intercourse between the various nations.

I am informed by the customs authorities of Havre that gauges, calipers, etc., are classed under the head of scientific instruments, upon which there is no duty when imported direct from the country of origin. If imported from America into France via one of the European countries, there is a surtax of 3.6 francs (69.5 cents) per 100 kilograms (220.46 pounds).

To successfully create a foreign outlet for the sale of

\*This report is in answer to inquiries by a New York firm, to which copy has been sent.

American goods, the field must be carefully exploited. Our manufacturers can not expect to make satisfactory arrangements for opening up a trade by sending to the different Consulates catalogues, price lists, circulars, etc., printed in English, with a request to the Consuls to deliver the same to some of the principal local dealers. This only takes up the time of the consular officers and seldom does any good, as the books are generally thrown aside or go into the waste-paper basket.

If our manufacturers want to open up a foreign trade, they should send abroad intelligent representatives (those speaking the language of the country would have more chance of getting satisfactory results) to investigate the economic and industrial conditions of the market, with a view of either establishing agencies managed and run by their own people (which is by far the best) or of selecting local agents whose financial condition and moral character have been ascertained to be good.

It is a great pleasure to note that during the past year there have been more visits received at this consulate from American manufacturers or their representatives than during the preceding years of the incumbency of the present consular officer.

A. M. THACKARA, Consul.

Havre, August 21, 1900.

#### IRON BEDSTEDS AND HARDWARE IN SYRIA.

At Haifa, North Palestine, industrial development is to be noted, which is largely due to the building of the railroad from Haifa to Damascus. There is a growing demand for carpenters' tools, locks, and other builders' Hardware. These articles are at present only to be had in inferior quality and are disproportionately high in price. To meet with a ready sale, they must be simple and strong in construction.

#### John H. Graham & Co.'s Export Catalogue.

In addition to the handsome catalogue issued by them in the interest of their domestic trade, John H. Graham & Co. have issued one, separate and distinct as to representation and contents, designed for distribution to foreign buyers for their representatives in the export trade of New York. It forms a volume of 382 pages, 8x11 inches in size, and bound in stiff cloth covers, with gilt title, representing the output of nearly fifty manufacturers. This export edition of a catalogue covering the products of so many leaders among the Hardware manufacturers is a valuable addition to the trade literature of the Hardware industry, and gives evidence in every page of great care and thoroughness in its compilation that must prove of considerable advantage in the distribution to foreign countries of so vast an assortment of the goods for which America has long been noted.

Being especially intended for export purposes, a few firms embodied in the other catalogue, who personally handle their export distribution, are omitted in this, so that the entire contents represent plants the export trade of which is handled exclusively by John H. Graham & Co.

Since the compilation of this catalogue they have become exclusive agents for the products of the Continental Tool Co., and, as previously noted in our paper, an extremely important addition for export trade, and new pages will at a later date be forwarded for addition to the catalogue. They will cover the several lines largely placed on the market by this company.

The valuable pages referred to in our review of the Domestic Catalogue, in which are given the contents of full cases, dimensions and gross and net weights, become all the more valuable to the representative of the foreign buyer, who can readily estimate costs of transportation in order to form an intelligent idea as to the economy of a foreign distribution under competitive costs.

Foreign buyers can be placed in possession of this desirable catalogue by making application through the New York representatives of their respective houses.

#### Hardware Advertising.

Manufacturing and merchandising on a scale broad enough to employ large capital and a large number of people must be so systematized that the principals are relieved from the strain and annoyance of detail. This is done by placing confidence in and throwing responsibilities on the employed. Untired minds and bodies successfully grasp and control important situations and pilot the interests of the stockholders and their patrons to a happy conclusion. Managers of retail stores, as ordinarily conducted, undertake too much and become so wearied by long hours and trifling details that they lose sight of larger matters bringing greater profits, and the remedy for this bad condition is a better distribution of store responsibilities. The experiment will surprise the employer and the employed. You have overdeveloped yourself, and underdeveloped your help. The chances are, if you make the trail of shifting detail responsibility on to the shoulders of clerks who give a little advance promise of future usefulness, that a surprise party will await you, as they will show an absence of old fogysm and key matters up to a 1900 pitch. and you become the pupil and they the teacher.

In this improved situation begins that class of Hardware advertising that pays. Your house is advertised as prompt and errorless. The stove department is under one manager, who becomes accountable for a full line of goods—well blackened and mounted on clean trucks. Pricing is perfect, miscellaneous orders for repairs, and notices of same to customer on arrival of his wants, and attention to collecting the pay, shuts off the item of "dead stove repairs." The implements and implement "extras" require another man with another order of talent, but under the same discipline and clothed with the same responsibility. The plumbing stock and estimates for builders—the building Hardware and general stock—each has its head. The new department responsibilities will create new zeal—disperse little jealousies—lessen opportunities for shirking. You ask, "What is the proprietor to do when others do the work?" Others don't do it. They clear the track and give the real race horse a chance to show his speed. The proprietor becomes the advertising head—meets the trade and shakes hands with them. Handshaking is as good in business as in politics, if you know how to do it. He sees that the implement clerk doesn't plumb the plumbing clerk's customer, or the plumbing clerk doesn't plow under the implement clerk's man.

Customers are human and humanity craves attention, and when the customer calls he always wants the proprietor to know he is "trading" with him, and the "head of the house" can do the welcoming act in a moment and pass him over to the proper salesman to finish the detail. The strain is slight, the customer is happy and the deal will go through.

"Warranted" goods provide a fruitful pasture for the growth of disputes and dissatisfaction. Have all cases referred to yourself. All goods "returned" in a year's time really amount to a very small sum. You can make the biggest kind of advertising out of every case, and, as I grow older in experience, I wish more customers would bring back more goods so I could do more advertising. Take the goods back and give new ones for them, but do it pleasantly and leave such a good feeling by the act that the customers will kick themselves all the way home for having troubled such a good fellow with such a beggarly trifle. That is advertising—they talk about you to your advantage from their seats on the rail fences and their seats at the "Parson's donation."

This freedom from detail gives you a chance to jog the memory of the delinquent, and press the collecting spur with tender delicacy. The proprietor becomes a walking bill-board, and his working hours are well occupied if he divides them fairly between the traveling agent, clerks and customers, with a little time on Sunday for church and family.

GEO. W. HUBBARD in *Detroit Trade*.

Goods should figure well in a discount sheet.

### Solving a Difficult Problem.

Loosening of the handles of table knives and forks is one of the most serious questions confronting the manufacturer, the dealer and the user. In the better grades of table cutlery rivets through the handle are undesirable as detracting from the appearance and finish; hence resort has been to cements for uniting tang to handle. Being subjected to constant use and frequent immersion into hot or boiling water, the action of the heat causes softening of the cement, with consequent expansion, resulting in splitting of handles, as well as destroying the adhesive qualities and allowing handles to come loose. While many excellent cements are to be had for this purpose,

there is none which will withstand the constant washing in hot water, and for this purpose manufacturers have long sought for some method of insuring permanency of fastening without sacrificing the finish and appearance.

The problem has been solved in a most admirable manner by the Goodell Co., Antrim, N. H., in the production of its new "400 Line" of table knives and forks, by the patented method here shown and described, whereby absolute rigidity and permanency are assured, and a product which for strength, durability and appearance is unsurpassed.

As shown in the accompanying illustration, the handle is bored to receive the tang in the usual manner. At the proper point a transverse channel is bored to the opening. The bolster is then placed in position, the tang inserted in the handle, and into the transverse opening is introduced hot metal, under heavy pressure. The nature of this metal is such that it unites solidly with the tang and bolster, and filling all interstices between these parts and the handle, unites the latter rigidly to the blade as one solid construction. The metal, being unaffected by atmospheric conditions, does not expand nor contract, like cement; hence splitting of handles is avoided and the durability limited only by actual wear of the parts. The durability of this fastening is attested by the fact that at a recent exhibition one of these handles was kept in boiling water with no result other than to somewhat impair the high polish of the wood.

In addition to the great improvement in method of fastening the "400 Line" is an exceedingly attractive one, as will be seen by reference to the advertisement of the Goodell Co. on

page 13. The bolster is handsomely designed and nickel-plated. The blades of the knives are highly polished and burnished. Forks are latest design, 4-tined and full nickel-plated throughout, being first treated with a heavy coating of block tin to insure perfect union of metals. Eight different styles of handles are furnished, with choice of ebony or cocobolo.

This line is in no way competitive, as it stands in a class by itself, being in every way superior to anything ever attempted in this direction. Permanency and solidity of fastening are absolutely guaranteed, while for design and finish it is unsurpassed. As in all other lines, the policy has here been adhered to of making only the best possible, which policy has been fully justified by the constant growth and

steady development of the company into its present position in the front rank of progressing American establishments.

### A New Advertising Plaque.

We show herewith a representation of a very attractive enameled sign which the Nicholson File Co., of Providence, R. I., has just brought out. It is a steel plaque, finished in a

deep blue enamel on one side and a brilliant scarlet on the reverse. The cuts of the file and rasp are shown in the exact shade of color of the steel, while the lettering is in silver and white. The plaque is designed to be hung up, and makes a very fine showing on the counter or walls of the Hardware store. It is quite in keeping with other effective advertising novelties brought out by this company from time to time.

The Nicholson Co. wish it announced that they will be pleased to furnish all wholesale and retail dealers who handle their various brands of files and rasps, as well as all machine and other shops where their files are used, with the above sign upon receipt of a request. If it is a large house and more than one would be desirable for distribution among its customers, the number required will be supplied. The company propose to enclose the sign in shipments to those of their customers who desire them. In the case of a concern which does not order direct, the sign will be supplied through their jobber or dealer.

Fultonville, N. Y., Sept. 10, 1900.

Lafin & Rand Powder Co., New York City:

Dear Sirs—Kindly accept thanks for catalogue and other

matter which came to hand to-day. They are very pleasing indeed to any one who is fond of hunting. This is my second season in the use of your shot gun "Smokeless," and I can assure you that your claims to its many good points are quite modest. It seems to be a "far reacher," and of good penetrating qualities at that. I have used a "Smokeless" that fouled the gun so badly that it was almost impossible to get it clean, even with a scratcher, but not so with the Lafin & Rand, which makes cleaning a pleasure.

Respectfully yours,

EDW. E. SIMPSON.

In 1898 the tobacco monopoly yielded France an income of 329,000,000 francs.

### National Vise and Tool Works.

The National Vise and Tool Works is a newly-organized concern which succeeds in a very gratifying manner to the entire vise business formerly controlled by W. E. Snediker, Jersey City. Tower & Lyon, 95 Chambers Street, New York, are the direct representatives of the new company, and will have complete control of their entire output, both for the export and domestic trade, they having for a long period placed on the market the Snediker and also the well-known

THE SNEDIKER QUICK ADJUSTING VISE.

Stephens vise, which was first manufactured by Nathan Stephens, nearly forty years ago; and who, having implicit faith in its selling merits, which was justified by the results, had a stock made by Cook, of Hartford, putting a large amount of money in the enterprise. Melvin Stephens, on the death of Nathan Stephens, succeeded to the business, but various other large enterprises prevented his giving the vise business the attention it deserved, so it was deemed advisable to establish the National Vise and Tool Works, with ample means for the manufacture and sale of goods already so well known and approved of. Mr. Snediker, who will be the practical head of the manufacturing department, has long been the maker of the "Stephens" and "Snediker" quick adjusting vises, of which we give illustrations herewith:

In this illustration the side is cut away so that all the working parts appear in their proper positions.

When the Screw Handle (not shown in the cut) is turned to the left, the Solid Nut is separated or recedes from the

THE STEPHENS PATENT VISE

toothed Nut Block; the Spiral Spring—the pressure being thus removed—pushes the toothed Nut Block up out of engagement with the toothed Rack in the Base or Stock, leaving the Sliding Jaw to be moved freely in or out without turning the screw. When the front jaw is pushed up against the work, one turn of the Screw Handle to the right draws the Solid Nut forward again into contact with, and pressing the toothed Nut Block down into engagement with, the Base Rack, when a further turn of the Screw tightens the Jaws on the work.

These improvements have made this an extremely popular vise. It has the advantage of an instant quick adjustment by a single motion with the powerful sure grip of an ordinary screw vise, and this is accomplished by adding two pieces to the ordinary common screw vise: the toothed rack in the bottom of the stock and the toothed nut block which engages in the rack, both of steel construction.

We give an illustration of the Stephens Patent Vises, which will form so large a part of the product of the new

SHOWING WORKING PARTS OF STEPHENS VISE.

works, showing the principle underlying their construction, the quick adjusting cam and toggle joint, which insure a firm hold and quick work.

The improved action made possible by this vise does away with the slow-moving screw, gives the solid bar with its added strength, and the power instantly applied, of the lever and cam and toggle joint. It is the intention of the new company to place upon the market at an early date an entirely new line of Stephens Patent Jewelers' Vises, which have been popular with that industry.

Tower & Lyon are equipping themselves by an additional force of salesmen to market this important product, with the design of making the trade in every large city fully conversant with their merit. The foreign trade will receive more attention than usual, as it is in contemplation to have one of the firm go abroad in the interest of the vise business at an early date.

### New York State Association of Hardware Jobbers.

The annual meeting of the New York State Association of Hardware Jobbers was held in New York City on Thursday, September 27th. The old officers were all re-elected to their respective positions as follows: President, J. W. Black, Burhans & Black Co., Syracuse; vice-president, James H. Boucher, Mathews & Boucher, Rochester; secretary-treasurer, S. J. Weaver, Weaver, Palmer & Richmond, Rochester; directors, Frederick Barker, Barker, Rose & Clinton Co., Elmira, and Charles W. Wells, Buffalo. Nothing important outside of the regular routine of business was transacted except that during the day opportunity was given for interesting conferences with representatives of the American Steel and Wire Co. and the Tuttle & Bailey Mfg. Co. In response to the courteous invitation of the American Tin Plate Co. the annual meeting was held at the Hotel Manhattan, and at 6:30 o'clock the members of the association, together with Secretary-Treasurer T. James Fernley, of the National Hardware Association, were the guests of the American Tin Plate Co. at an elaborately prepared banquet, and in the evening were finely entertained by their generous hosts at a theatre party. The American Tin Plate Co. did their very best to make it pleasant for the gentlemen representing this important organization, and in connection with which was the use of an unique table service and the necessary furnishings, which were all made of American tin plate, especially for the occasion.

During the last twenty-five years the American people have imported \$180,000,000 worth of precious stones.

## FORTY YEARS IN HARDWARE.

### SOME CHANGES WHICH FOUR DECADES HAVE WROUGHT.

You ask me to furnish your readers with some information as to the difference in methods of conducting the Hardware business, as we are accustomed now to know them, and conditions eighteen years ago.

The first thought is that this is an easy thing to do, that there have been great changes in eighteen years, and that one can easily fill a column or two in enumerating them, but I find it a very difficult task to write a satisfactory article confined to the experiences of so short a time.

It is true that in eighteen years there have been many changes, both in goods and in methods. A score of years ago we had more trade with lumbermen and less with furniture manufacturers. It is within this period of time, I think, that the old iron cut nail has been displaced by the steel cut nail, and it in turn by the steel wire nail, now almost exclusively used. I would not like you to ask me to go back and give you a history of changes which have taken place since Wilder D. Foster started the first tinshop in this city in 1837, for this is only a matter of hearsay, and I would not be good authority. Neither ask me to commence with 1845, when the firm of Foster & Parry was formed, for that, while a matter of record, was before my time.

I have before me, as I write, the articles of co-partnership above referred to, dated July 22, 1845, in which I find the following sentence:

"They each of them have this day paid in full sum of one hundred and fifty dollars to be used, laid out and employed in common between them, in the management of said trade and business, to their mutual benefit and advantage."

Ask me to tell you some of the changes which have taken place in the Hardware business during the past thirty-eight years and a more extended article can be written. Strange as it may seem, I think it is a fact that as we grow older we live over again in our minds the days of our youth. We live in the past. We remember much more vividly the happenings of our daily life when young than we do the occurrences of later life. So it seems I remember more distinctly the early methods, the class of goods handled and the people we did business with.

In 1862 the shelves of a Hardware establishment did not look much as they do now. Then most of the shelf and many of the heavy goods were imported. We did not have the tasteful paper and wooden boxes nicely sampled on our shelves, but instead a clumsily done up paper package, with a sample of the contents tied on the outside. Every time an article was sold this package had to be taken down, the contents shown, and, after a sale was made, what was left was done up again, re-sampled and returned to its place on the shelf. You can readily imagine the appearance of the shelves after the day's work was done; and the days were long—from early morning until 9 o'clock or after, six days in the week.

There was no wholesale Hardware trade in the city, as there were no country stores tributary to us who handled Hardware. There were no railroads to bring us customers. Our trade, outside of the city, was exclusively with lumbermen and farmers, and how we did dread the rainy periods of Spring and Fall when the roads were impassable by reason of the mud and our customers could not come to town!

There were no factories making pressed tinware, the result being that every establishment had to run a well-equipped tinshop for making pieced ware, stovepipe, elbows, etc., besides doing general job work, from putting up conductors and cave troughs to making steam pipes of copper for our river

boats, at \$1 per pound for the copper and \$8 per day for coppersmith and helper. I remember, also, that we paid 75 cents per dozen for making common stovepipe elbows, we furnishing tools, shop room, stock, heat and light.

There was much barter in the early days of the Hardware trade in Grand Rapids. Anything the farmer raised could be changed for goods. Wood, dressed hogs, corn, potatoes, cheese and butter were taken and disposed of to employees. Our factories and mills paid their hands largely in orders on the stores and settled their accounts once each year. The farmer was offended if asked to pay before harvest, and

WILDER D. STEVENS.

did not always pay then. It was necessary to keep a man on the road all the time, with a buckboard in summer and sleigh in winter, making settlements, and many a note was saved from outlawing by endorsing the value of a meal taken with him, usually 25 cents.

The store was not supplied with porters to wash windows, get up heavy goods from the basement and wood for heating. The clerks did all of that work and the brunt of it usually fell upon the youngest of them.

One feature is still remembered with vividness and that is the rag bin. All Hardware stores took rags—both city and country rags—for goods. In some convenient place in the floor of the salesroom was a trap door leading to the bin in the basement. After weighing the bag—they were usually brought in a bag—the contents were shaken out into the bin, stones and all, for even the honest farmer would sometimes not be careful in filling the bag. When the bin was full and trade quiet, the "cub" was sent into the bin to assort and sack ready for shipment to Eastern paper mills. I should think I spent nearly half of my first year in the rag bin, working by the light of a coal oil lantern or candle, and this

reminds me that I can remember when the only lantern made or sold in our establishment used a candle as a means of light. It was constructed of tin, with a light of 7 x 9 glass in front; in fact, our first production had no glass, the rays of light coming through slits cut in the tin with what was called a "lantern chisel." I doubt if there is a "lantern chisel" in any Hardware store in the United States at the present time.

There have been many, many changes in the character of goods handled. I can not begin to enumerate them. The scythe and cradle have been to a great extent displaced by the mower and reaper, now handled exclusively by agricultural and implement dealers in the city. Belting, packing and mill supplies generally have left the Hardware stock and are sold by establishments paying particular attention to this class of goods. The wagon, carriage and harness Hardware is also handled by exclusive houses. The spinning wheel, which used to take up so much room, has given place to the bicycle in many Hardware stores. The tinshop has been almost abolished, outside work being done by houses established for this purpose, and pieced tinware has been largely displaced by pressed ware. The rough ironware for kitchen use has almost disappeared and we have the lighter granite and polished steelware. The steel knife and fork, with wood or bone handle, has given place to fine plated or sterling goods.

The old and clumsy counters have to some extent disappeared, their place being taken by handsome plate glass show cases, filled with attractive goods. Barbed wire for fencing now employs the capital formerly invested in mill and logging supplies, while sporting goods occupy the space formerly taken up by heavier and rougher goods necessary in a newly settled country.

The old wooden carpenter planes have given place to the lighter iron tool, in endless variety. The old boring machines are nearly a thing of the past, and shop work by machinery has made unnecessary many carpenter tools which were constantly called for.

I think the most important and gratifying change that has been made in the Hardware business is the change from imported goods to those of American manufacture. American iron, American steel, American tinplate, and the manufactured products thereof, constitute 95 per cent. of a stock of Hardware at the present time, while in 1862 about as large a proportion was imported.

WILDER D. STEVENS, in *The Michigan Tradesman*.

### M. S. Benedict Mfg. Co.'s New Catalogues.

The M. S. Benedict Mfg. Co., East Syracuse, N. Y., with branch offices at 409 Broadway, New York, 40 Yonge Street, Toronto, Ont., and 111 Wabash Avenue, Chicago, Ill., have recently published three extremely handsome catalogues, oblong in shape, 9x12 inches in size, devoted to the exhibition of the several lines of goods with the sale of which they have been long identified. The catalogue devoted to silver-plated hollow ware and flat ware, is No. 16, and contains 175 pages, bound in bright red covers, with gilt embossed title. The illustrations are of the most handsome character that we have seen in a catalogue of this description, very finely engraved, illustrating the goods admirably, and including with the fine full-page half-tone illustrations of silver tea sets, a number of pages printed in color covering a line of specialties such as cracker jars and sugar and pickle sets, water bottles and creamers, etc., manufactured from imported Bohemian ware in all the various colors, royal blue, chocolate brown, gold decorated, old rose, carnation pink, etc., with hand burnished gold-plated mountings, and also quadruple silver-plated mountings. These pages are artistically presented in the handsome colors and tints that fully illustrate these high-toned goods, and to those unfamiliar with the excellence of a publication of this kind will seem extremely unique. In their introductory remarks, the company state they cast and

roll direct from the ingot, silver included, all metals that enter into the manufacture of their ware, effecting a saving of intermediate profits and reducing the cost of production to a low figure. They also state that any piece of metal ware bearing their stamp or label is guaranteed quadruple plate of pure silver .999 fine on a base of pure hard white metal, and warranted to wear ten years with ordinary use. An excellent two-page index at the end of the book gives quick reference to its contents, which include several pages of genuine cut glass ware, which now forms an attractive feature in connection with a display of silver ware. Issued at the same time as a supplementary volume, covering the novelties in the way of silverware that are now usually found in a well assorted stock, is a pamphlet catalogue No. 17, of the same dimensions as No. 16, having 96 pages, and displays their entirely new designs of sterling silver-mounted goods, toilet sets, sterling silver manicure articles, ormolu gold and silver-plated frames and novelties, including a line of burnished ormolu gold-plated clocks. A very good idea of these goods can be obtained from the line engravings with which this catalogue is filled. An additional catalogue completes the set, of the same size as the others, but having only 22 pages, and covers a line of silver plated ware of standard A1 plate on an 18 per cent. nickel base. The assortment includes forks and knives that are warranted "twelve" pennyweight, and are so stamped. This is a very valuable set of catalogues, which in their completeness and style, would indicate the importance of the manufacturing facilities of this well-known company.

### Novelty Mfg. Co.'s "Neverbreak" Steel Registers.

The Novelty Mfg. Co., Jackson, Mich., are placing upon the market a line of warm air registers and ventilators

"NEVERBREAK" STEEL REGISTER.

manufactured entirely from sheet steel and steel plate. They are marketed under the name of the "Neverbreak" steel registers, and are claimed by the manufacturers from their careful construction and modern material, to be absolutely indestructible. An illustration of these goods is given herewith, presenting as they do features in common with all corresponding styles of registers. They are made in all standard sizes, and furnished in any style of finish desired to harmonize with the other metal trimmings where it is designed to place them. The method of construction and the material used enable the manufacturers to make smoother, handsomer and better finished goods than are usually found in the older styles of cast iron registers. They are provided with aluminum bronze valves, unless otherwise ordered, as the manufacturers contend that aluminum bronze will always retain its color and does not show dirt and dust like any other color, and from the nature of the metal used, it is more readily discovered whether the valves are opened or closed, which is frequently difficult with the ordinary register so generally used heretofore.

## RECENT TRADE PUBLICATIONS.

**PITTSBURGH STOVE & RANGE Co.,** successors to Bissell & Co., Pittsburgh, Pa. Sixty-page catalogue of stoves and ranges well known to the Hardware trade under the name of the Triumph. The catalogue is printed on excellent paper, and the illustrations are very handsome and admirably show the artistic style which is the crowning feature of most of those shown.

**ART STOVE Co.,** Detroit, Mich. Descriptive catalogue and price list of Laurel stoves and ranges. Pamphlet catalogue of 128 pages, printed on coated paper, and beautifully illustrated with half tones showing the complete line of goods manufactured by this company, including steel ranges in large variety, cast iron ranges, cook and parlor stoves, all of which are described in a thorough manner intelligible to the buyer.

**KAMPFE BROTHERS,** 8 Reade Street, New York. Oblong catalogue of 28 pages, printed on excellent paper, of genuine "Star" Safety Razors, and handsomely illustrated in colors, showing their line in all the various styles in which they are put up, including those in cases. Included in the contents will also be found the razor-stropping machine and "Star" honing machine, and a line of razor strops suitable for use in connection with this well-known safety razor.

**S. W. CARD MFG. Co.,** Mansfield, Mass. Pamphlet catalogue of 76 pages, embracing the line of high-grade goods manufactured by this well-known company, including in its contents machinists' hand taps, pulley, taper, hob, stove-bolt and stay-bolt taps, blacksmiths' taper taps, reamers, machinists' screw plates in large variety, gunsmiths' and amateurs' screw-plates, and a line of high-grade screw-plates marketed under the name of the "Diamond," etc., etc. This small catalogue is a reproduction by photo-engraving of their large catalogue, and is intended for a more general distribution, in order to familiarize the trade with the extensive line which this company are now engaged in manufacturing.

**INTERNATIONAL SILVER Co.,** successors of Rogers & Bro., Waterbury, Conn. Catalogue No. 70, covering the line of goods of the celebrated Star brand, and known under the name of Rogers & Brother's A No. 1. This extremely handsome catalogue of convenient size, covering 100 pages with cover, embraces in its contents every description of flat ware manufactured under the above trade mark, including all the latest styles of ornamentation as well as the old established lines so well known to the Hardware trade; is printed on excellent paper, and finely illustrated with illustrations of the highest grade of art, reflecting credit on the company distributing the same, and undoubtedly worthy of acceptance by the Hardware trade to whom it is sent.

**SYRACUSE PLOW Co.,** Syracuse, N. Y. Pamphlet catalogue of 50 pages, being their barrow and truck catalogue No. 9. Printed in colors throughout, and with an embossed cover lettered in bronze. This catalogue contains within its contents their line of wood and steel wheelbarrows, contractors' plows, steel sewer buckets, drag, road and wheel scrapers, charging barrows, steel skips, push carts, store and warehouse trucks, railroad, wharf, grocery and baggage trucks. This is a very fine catalogue of the class of goods distributed, the assortment being one that is extremely complete, list prices accompanying the entire line, subject to a discount furnished to the trade by the company. It is a very desirable catalogue for the Hardware trade handling these important goods.

**WILCOX Mfg. Co.,** Aurora, Ill. Pamphlet catalogue of 64 pages of their large line of door hangers and Hardware specialties, which include the Richards improved door hangers in large variety, and roller bearing steel barn door hangers; also the fire door hangers manufactured by this company, and well known to those handling such supplies. They also manufacture a large line of overhead carrying track systems which are graphically illustrated and explained in this catalogue, together with their ball-bearing ladder fixtures for Hardware stores. Included in the contents are elevator door hangers in variety, door holders, barn door hangers, steel door tracks, latches, stay rollers, etc. Their line of goods is well known to the trade, and this, their latest catalogue, includes all the improved styles that have been added to their assortment since the date of their previous catalogue.

**WHEELING CORRUGATING Co.,** Wheeling, W. Va. Seventy-six-page catalogue 8 x 10 inches in size, very handsomely gotten up as to style of paper, printing and illustration, and showing in a remarkably graphic manner the various patterns and designs of ornamentation noticeable in their line of products of metal ceilings, the half tone illustrations depicting the same being of a high grade of art, and showing the patterns admirably. This is evidently intended for distribution in Spanish-American countries, all the text being printed in Spanish, and should largely assist in introducing this class of goods wherever the catalogue is distributed. It certainly reflects credit upon the catalogue department of this company, that a catalogue so complete in all its parts and printed in a foreign language and so worthy of distribution should be undertaken by them. It is certainly a beauty.

**THE SIMMONS HARDWARE Co.,** St. Louis, Mo., distributing as they do to a large constituency so many and various catalogues, in addition to the mammoth one which forms their business text book and authority, are occasionally able for a special department to publish something extremely artistic, graphic and wide-reaching. And such an one is Catalogue 375, issued in the interest of their department embracing lamps, jardinières and art pictures, and to properly and adequately exploit the extensive line covered by these few names makes necessary a volume of 360 pages, oblong in shape, 7 1-2 x 9 1-2 inches, and admirably illustrated throughout, many of the pages being printed by the aid of a color process, in the natural colors of the articles represented, that makes an exceedingly attractive display of the contents of the pages. Especially is this noticeable in lamps and globes and framed pictures and other art goods.

**STANDARD WELDING Co.,** Cleveland, Ohio. Catalogue No. 3, covering the seamless steel tube bicycle parts made by this company, and illustrating their system of electric welding of metals. This is a very handsomely gotten up catalogue of 30 pages, and illustrates seat posts, rear forks and stays, fork sides, chain adjusters, mud guard braces, and refers to the seamless steel tubes of all the standard sizes and gauges manufactured by this well known company, together with parts, illustrations of the same, and illustrations showing the feasibility of using the process of electric welding which is the great specialty of this company. Illustrations are given of the numerous sheet steel stampings for bicycles with the manufacture of which this company is identified. A list is given on the final page of a large number of articles that have been welded by this process, and which is in daily use by them. It is well worthy of consideration by those interested.

## NEW GOODS AND SPECIALTIES.

### "Never-Twist" Screw Driver.

Braunsdorf-Mueller Co. are placing upon the market something new and desirable in the way of a screw driver, which is marketed under the name of the Never-Twist Screw Driver, referring as it does to one of its special features, being guaranteed by the manufacturers never to twist in the handle. In fact, so confident are they of this fact that they agree to give one dozen screw drivers for every Never-Twist Screw Driver that turns in the handle. Notwith-

FIG. 1.—"NEVER-TWIST" SCREW DRIVER.

standing the number of drivers already on the market, each of them possessing features of merit that commend them to the user, there is still room in the trade for the introduction of another, provided it possesses new and original points of interest. In this one under consideration (see Fig. 1), attention is called to the construction of the ferrules; as will be noticed in Fig. 2, they are square, thus enabling the screw driver to maintain that rigidity and inability to turn so confidently relied upon by the manufacturers. The holes

FIG. 2.—"NEVER-TWIST" SCREW DRIVER

in the bottom of the ferrules, through which the tangs of blades pass, are also square, subsequently making the blades firm and unturnable, the blade, ferrule and handle being as rigid in this connection as if constructed of one piece. They are very handsomely finished, manufactured from the very highest grade of tool steel; great care is taken in tempering the blades to have them of uniform evenness. Every screw driver that leaves the factory is warranted perfect. A patent has been applied for on this novel device, and there is every reason to believe that it will be promptly granted. The address of the Braunsdorf-Mueller Co. is Elizabeth, N. J.

### "The Dolly" Washing Machine.

The Novelty Mfg. Co., Rock Island, Ill., are manufacturing for sale to the Hardware and housefurnishing trade "The Dolly" Washer, an illustration of which we give in this article. It is claimed to be one of the cheapest machines for the purpose placed before the trade, and suitable for any small family, and on this account likely to prove an attract-

"THE DOLLY" WASHING MACHINE.

ive seller. It will fit any wash tub, and is claimed to wash the clothes clean without the aid of a washboard. One of its principal recommendations is the fact that it can be marketed so as to be retailed at one dollar, and still pay a good profit to the dealer. It is noiseless in operation, and sufficiently strong to be durable, weighing only six pounds. Further information will be given by the manufacturers upon application.

### Geared Bi-Treadle Emery Wheel Grinders.

Schofield & Co., Freeport, Ill., are successfully placing upon the market the geared bi-treadle emery wheel grinder, which is illustrated herewith. It possesses a steel frame, and in its method of construction requires no belt. The manufacturers state that the grinder will do any grinding that can be done with a grindstone, and will do it twice as fast.

GEARED BI-TREADLE EMERY WHEEL GRINDER.

They also state that the machine will be found much more desirable for the use of a farmer than any grindstone. They have had on the market for several years a bi-treadle grinder, and, in comparison with that, the geared grinder illustrated here runs with much less friction, consequently runs more easily, and it is also claimed can be sold cheaper than the older machine. It can also be provided with a sickle-grinder attachment at a slight additional cost. This geared emery wheel grinder is especially adapted for use in blacksmith shops; in fact, all repair shops, being useful in all kinds of tool grinding.

### "Circle S" Horse Shoe Pincer.

H. D. Smith & Co., Plantsville, Conn., and 253 Broadway, New York, among their numerous specialties have recently placed upon the market a high-grade horse-shoe pincer, patented under the recent date of August 14, 1900. We illustrate this desirable article herewith. It is intended to super-

"CIRCLE S" HORSE SHOE PINCER.

sede the German article of similar appearance, which has for a long time been known to the Hardware trade, and the quality of which bears no comparison with the class of goods represented by the article under review. It is in common with other productions of this well-known company commended to the trade as an article of superior merit, and corresponds in excellence with the carpenters' pincer which has been before the market some time and made by the same company. It is made of high grade steel, nicely finished, and has well tempered jaws. The hammer device on each side

of the head is a practical and convenient innovation. The horse shoe pincer is made in sizes of 10 and 12 inch, and are packed in wooden boxes, with a sliding cover, of one-third of a dozen each, six dozen to an original case, and are branded "Circle S," which indicates on goods manufactured by this company that they are made from their best forgings.

**Improved Cold Handle Sad Irons.**

The Wrightsville Hardware Co., Wrightsville, Pa., Alder & Boyd, 37 Warren Street, New York, agents, have recently

FIG. 1—MRS. BEST'S IMPROVED IRONS

placed upon the market the improved sad irons illustrated in this article. The new and unique feature of these irons lies in the handle stretcher, and the novel method of attaching it to the irons, three of which constitute a set. In Fig. 1 it will be noticed a hole is seen in the lug which extends below the center of the stretcher. The lug is stationary. In attaching to the iron the handle is placed crosswise, as in Fig. 2, a pin on the iron entering the hole in the lug. The handle then by being turned lengthwise of the iron, enables the narrow lugs near each end of the stretcher being actuated by a spring, to drop into openings provided in the top of the iron. As the center lug extends under the plate on the iron, it prevents the handle being lifted off, while the end lugs keep the handle lengthwise of the iron. When necessary to remove the handle, the end lugs are lifted by means of the knob on the top of the stretcher, enabling the handle to be turned around and taken off. The manufacturers state that with reasonable care the handle will last a lifetime, and that

FIG. 2.—SHOWING MODE OF ADJUSTMENT.

no fear need be entertained that the device for attaching the handle to the iron will become loose and allow the iron to drop on the floor.

**"The Masterpiece" Saw Set No. 95.**

Among the many tools of the carpenter that have developed with the more intelligent requirements of the skilled mechanic, the saw set which for several decades showed but few signs of improvement is to-day found away in advance, and

in the perfect saw set, No. 95, manufactured by Charles Morrill, 275 Broadway, New York, has finally arrived at a point of excellence which makes the name of "The Masterpiece" fairly applicable. We present herewith an illustration of this tool, together with a sectional view giving in detail the principal mechanism of its movement. As will be noted, the revolving anvil with indicator is subdivided and marked

FIG. 1—"THE MASTERPIECE" SAW SET NO. 95

with figures, the figures showing the number of teeth to the inch in the saw to be set. If the saw, for example, has 10 teeth to the inch, the anvil is turned until the figure 10, as indicated in the cut, comes up directly in front of the plunger, and the set is operated in the usual manner. The gauge screw is placed so the saw can pass through without friction in its operation, the saw blades being held rigid by vise or clamp, the head of the saw set being held steadily against the blade of the saw, the right hand being used to

FIG. 2.—SECTIONAL VIEW, SHOWING MECHANISM.

compress the handles carrying the plunger forward and setting the teeth properly.

**Hart's Flag Staff Brackets.**

Walter Hart, 113 Liberty Street, New York, has recently appointed John H. Graham & Co., 113 Chambers Street, New York, his general agent (other than in Greater New

FIG. 1.—"SHIELD" FLAG STAFF BRACKET.

York). Mr. Hart, for the last twenty years, has been a large manufacturer of a line of specialties known as flag-staff brackets. It is a rare thing to find his line of goods represented by such a variety, but Mr. Hart, as patentee and manufacturer, has made a specialty of this particular class of goods, and has added to the assortment about everything that could reasonably be required for the purpose. We present herewith a number of the leading styles. Fig. 1 shows

the "Shield" Bracket, which is non-adjustable, and fills the call for a bracket of the lowest possible cost, yet ornamental enough to attract and make it a good seller. Fig. 2 is the "Ball and Socket" flag staff bracket, which is adjustable, but of simple construction, consisting only of two parts, but meeting

FIG. 2.—"BALL AND SOCKET" FLAG-STAFF BRACKET.

the demand for an article of this description at a moderate cost. One of the higher grade brackets found in the assortment is the "Patriot" flag staff bracket. This has a double adjustability, and is so constructed that it can be set up on bases, an improvement that we have not seen in any other bracket now on the market. Other improvements suggested by long experience have been added by the patentee and manufacturer, making this a most desirable style, as it overcomes every difficulty of alignment of the flag staff, being adjustable both horizontally and perpendicularly. These goods are sold at a good discount to the trade, and might be

FIG. 3.—"PATRIOT" FLAG-STAFF BRACKET.

added to the line of any dealer in the country and found salable at all seasons of the year.

#### "Simplicity" Incandescent Vapor Gas Lamps.

H. Merkel, 509-511 Elm Street, St. Louis, Mo., is placing upon the market at the present time a line of incandescent vapor gas lamps, which are called the "Simplicity," and from their general appearance, ease of adjustment and method of accomplishing results, deserve their name. They are intended for the use of gasoline, which is claimed by the manufacturer to be the most brilliant and cheapest light of the age, estimated to be ten times as cheap as electric light, five times as cheap as gas and accomplishing results in the way of

illumination that are wonderful, considering the slight cost. We present herewith several illustrations showing the styles in which these goods are marketed by the manufacturer, Fig. 1 representing a study, or portable lamp, the stand for which is heavily weighted, in order to prevent upsetting.

FIG. 1.—"STUDY" LAMP.

FIG. 2.—SINGLE-LIGHT PENDANT.

Fig. 2 shows their single-light pendant, manufactured from solid brass, highly polished, and with gilt ornament, representing their No. 5, as shown in the catalogue. Fig. 3 illustrates their two-light chandelier, also constructed from highly polished solid brass, and containing reservoir that holds two

FIG. 3.—TWO-LIGHT CHANDELIER.

quarts. Each light is calculated to give 100 candle-power. The manufacturer publishes a catalogue illustrating a number of styles of these appliances, which may be had for the asking.

Passenger—Can you tell me, my good man, the name of that fine bird hovering about?"

Old Salt—That's a halbatross, sir.

Passenger—It's a rara avis, is it not?

Old Salt—Dunno, sir; I've always heard it called a halbatross.

Passenger—Yes, yes, my good fellow; but I call that a rara avis just as I call you a genus homo.

Old Salt (indignantly)—Oh, then, I calls that a halbatross just the same as I calls you an old idiot.—*Collier's Weekly*.

55 Equitable Building,

BOSTON.

REVIEW OF THE MARKETS.

**Hardware:** The demand for general Hardware has been improving every week as the season progresses, and has in many respects been a surprise to the jobbers, who are accustomed to discount the deterrent influence associated with a National political canvass. The consumers generally are in good condition to buy, and have stimulated trade from the proper end—that of the retail buyer. The conditions at present are very safe, satisfactory and encouraging.

**Wire Nails:** The business in wire nails has been remarkably good in average demand, although large specifications have not generally been the feature. There is no change in the current quotations, which may be named as follows, f. o. b. Pittsburgh, terms 60 days or 2 per cent. off in 10 days:

To jobbers in carload lots	\$2.20
less than carload lots	2.25
To retailers in carload lots	2.30
less than carload lots	2.40

New York prices remain as heretofore:

To retailers, carload lots on dock	\$2.48
less than carload lots on dock	2.55
Small lots from store	\$2.60 to 2.65

**Cut Nails:** There is but a moderate demand for cut nails, and mostly of a sorting-up character. Prices are held steadily at mill, but are occasionally shaded for smaller quantities from jobbers' hands. Prices are as previously quoted, f. o. b. Pittsburgh, terms 60 days 2 per cent. off in 10 days:

Carload lots	\$1.95
To jobbers in less than carload lots	2.00
To retailers in less than carload lots	2.10

New York prices remain the same, the following quotations representing the market

To jobbers in carload lots on dock	\$2.13
less than carload lots on dock	2.18
To retailers in less than carload lots on dock	2.31
Small lots from store	\$2.30 to 2.35

**Barb Wire:** Only a fairly moderate trade is shown for Barb Wire, the season being pretty well over for large requirements for domestic orders. Prices remain as previously quoted for domestic trade, as follows, f. o. b. Pittsburgh, net cash 60 days, or 2 per cent. discount for cash in 10 days:

To jobbers in carload lots, Painted	\$2.50
Galvanized	2.80
To jobbers in less than carload lots, Painted	2.55
Galvanized	2.85
To retailers in carload lots, Painted	2.60
Galvanized	2.90
To retailers in less than carload lots, Painted	2.70
Galvanized	3.00

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden 10 cents per 100 pounds higher than the prices above named.

**Plain Wire:** The demand for Plain Wire indicates a more active demand than previously reported, and is regarded with satisfaction by the manufacturers. Current quotations remain as previously established, f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in 10 days:

	Base sizes.	Plain.	Galv.
To jobbers in carload lots	\$2.15	\$2.55	
less than carload lots	2.20	2.60	
To retailers in carload lots	2.25	2.65	
less than carload lots	2.35	2.75	

Above prices are for the base numbers, 6 to 9. The other numbers of Plain Wire and Galvanized Wire take the several advances noted in the following table:

PLAIN FENCE WIRE ADVANCES (CATCH WEIGHTS.)			
Nos.	Base	Galvanized.	
6 to 9	\$0.05 advance over base	\$0.40 extra.	
10	.10	.40	
11	.15	.40	
12 and 12½	.25	.40	
13	.35	.40	
14	.45	.40	
15	.55	.75	
16	.75	.75	
17	.85	1.00	
18		1.00	

Galvanized Wire up to No. 14 is 40 cents advance on Plain,

Nos. 15 and 16, 75 cents advance, and Nos. 17 and 18, \$1 advance.

**Cordage:** The cordage market still indicates a weakness in Manila Rope, but Sisal has evidently touched bottom. The following quotations represent the market at the present time:

	Pounds.	Cents.
Manila, 7-16 inch and larger	9½	
¾ inch	10	
¾ inch and 5-16 inch	10½	
Sisal, 7-16 inch and larger	6½	
¾ inch	7	
¾ inch and 5-16 inch	7½	
Lath Yarn, Medium and Coarse	6½	

**Linseed Oil:** Dean Linseed Oil Co. quote as follows:  
In lots of less than 5 barrels.....62 cents per gallon.  
In lots of 5 barrels or more.....61 cents per gallon.  
The five barrel price only applies to deliveries of that quantity at one time.  
Boiled Linseed Oil, 2 cents per gallon higher than Raw.  
Calcutta Oil, 76 cents per gallon.

THE ALBANY TRADE.

Fall trade started with its usual vigor, orders showing that business vitality had not been wholly sapped by the extraordinary length and fierceness of "the heated term." A slight reaction is somewhat noticeable just now, as it appears that "Old Sol" and "Gen. Humidity" feel that they have not quite discharged their obligations, and have a few more laps to run before taking leave of us. Consequently it imparts some sluggishness in the moving of Winter goods that probably would keep up the pace originally started were the weather normal. It may be, however, that a drop in the temperature will come suddenly before this is printed; then nothing but the coal strike and the excitement over the coming election will interfere with trade. The lesson of patience has within the past two years been fairly well learned by Hardwaremen. Surprises in prices, scarcity in goods at intervals, overstocks at reduced prices, and many other evils occur in rapid succession, and do not seem to create the disturbance of earlier days. If people would buy Hardware on the same basis that Mrs. Partington bought her tea (by the fifty cents' worth), how smoothly everything would run along, and how unnecessary to make rebates at settlements to meet the drop occurring after shipments are made. The delightful banquet enjoyed by the members of the New York State Association of Hardware Jobbers at the Hotel Manhattan, New York, on September 27th, tendered by the American Tin Plate Co., in return for similar courtesies on the part of the jobbers in the past, was a most felicitous occasion, and decidedly unique. The entire dinner service was especially made for this banquet, and though of silvery brightness, was nothing more or less than genuine American tinplate in the conventional shapes used at banquets. The plates for the Little Necks, the soup, the entrees, the roasts, game, punch, salad and desserts were not only exact copies of china service, but the sherry, sauterne, claret, and champagne were served in tins shaped like the customary cut glasses. The decorations of the table were exquisite—flowers in tall vases of brightly burnished tinplate. At the first glance of the table, no doubt the perilous flavor of "free silver" was suggested, but an examination of the menu and guest cards (all in tin) dispelled the thought and the conclusion was quickly reached that this was a great object lesson, showing the product of one of the youngest of the great industries of the United States, made possible by a gold standard of money, the protection of American labor, and the commendable progress of skill, industry and indefatigable labor exemplified by the great American Tin Plate Co. An exhibition of this remarkable dinner service would elicit unstinted praise for the makers, and interest the public unquestionably.

ALBANY HARDWARE & IRON CO.

**THE PHILADELPHIA TRADE.**

Fall trade has now fairly opened, and, considering the unusually warm weather, it is very gratifying to find the demand for Hardware should be so good. Reports from various sources show that stocks generally are low, and the orders received indicate such is the fact, as a general assortment of goods is in demand, and the volume of sales is very well maintained without any pressure to sell goods ahead. Of course, the weather has retarded future business, and Fall and Winter goods can hardly be expected to move until we have a lower temperature.

The condition of the market is such as to make us realize the old saying that doubtful things are always uncertain. While some prices are lower, others, again, have reached such a low point, manufacturers are already talking of a reaction, and it is difficult now to see how some lines of goods can be manufactured at the prices for which they are sold.

The event of the past two weeks has been the marked increase in the price of Cotton Sash Cord—all cotton goods being higher in consequence of the short crop and the Galveston disaster.

BIDDLE HARDWARE CO.

**THE PITTSBURGH TRADE.**

Fall trade is going on prosperously with a very good consuming demand, which keeps goods moving through regular channels in good quantity. There is no buying beyond immediate wants, and this fact, coupled with the good output, shows the consumer to be using up a very fair quantity. Regarding prices, we think most goods have touched bottom, and if a good, steady demand continues, may even react in some items. This is not the case, however, with wire, nails and shovels. These prices are still artificial, and controlled by combinations, which no doubt intend to make all the money they can before competition arrives. That there is a good demand for these goods only proves the prosperous condition of the country, for no jobber will stock beyond his immediate requirements. We do not grudge the manufacturer a fair profit, but \$30 margin between pig iron and nails is too large to be healthful. Political matters are not making nearly the stir here that might be expected. Pennsylvania not being a doubtful State, we are allowed to go our own way and attend to regular business.

LOGAN-GREGG HARDWARE CO.

**THE BIRMINGHAM TRADE.**

There is a steady demand for goods, and very little talk given to the electing of President of the United States. We would judge from the want of discussion on this subject that the public generally had about decided that their efforts would not change results, and have given their thought and attention to business, which we consider a favorable indication. It would appear that the politicians are powerless to create issues that stir the people, and that real issues come in the existing conditions. The people are not afraid of becoming an empire. The agriculturist is now happy that cotton has reached ten cents a pound, which condition was beyond his hopes only a few years ago. This will stimulate trade in all the lines of goods which he consumes and help a class of our people which have suffered most in the depressions through which we have passed. The Tennessee Coal, Iron and Railroad Company are going ahead with their rail mill, also the Austin-Bryan Mfg. Company, who make plow shapes or steel blades for the former, are now turning out their product and gradually our district is consuming more and more of the raw material, which is a hopeful sign and will help to produce steady consumption and continuous run of the mines and furnaces. Two rolling mills of the Republic Iron and Steel Co. started up on the first of the month, and now we hope to obtain supplies of bar and sheet iron more readily. While the demand for goods is steady and large, the prices remain somewhat unsettled, and we will be glad to see a more steady market.

MOORE & HANDLEY HARDWARE CO.

**THE CLEVELAND TRADE.**

The general impression that there will be no change in the administration keeps business fairly active, but certainty on that point would at once create an activity that would remind us of the Fall of '98.

We have nothing to fear but ourselves; every indication save the fear of our own folly favors a splendid business outlook.

There is likely to be continued hesitation in business until the election is over, when a radical change will take place one way or the other. The plan to change the Constitution to give Congress power to deal with Trusts is the only danger of imperialism to be feared. That would change our entire system of government.

If Congress is given the power to control the internal relations of the States, we shall have an empire and not a republic; it would be like burning a house to destroy bedbugs. That a way will be found to solve our difficulties without destroying our form of government, or the business of the country, is certain if we can use good sense and get the people to give it dispassionate consideration. That Congress has no power to prevent or control combinations incorporated by the States ought to be conceded by all parties. Nothing effective will be done until this is accepted, when the States, to whom the matter belongs, will take it up in earnest.

If clamor of politicians compels Congress to attempt legislation to this end, it means long years of prosperity to the trusts, while the people wait for the law's delay, which is sure to end in decision, and such a law is unconstitutional. This will be delay for the benefit of the trusts. Abolish the Supreme Court, say some, but a shorter cut would be to choose a king and abandon all attempts of self-government.

THE LOCKWOOD-TAYLOR HARDWARE CO.

**THE COLUMBUS TRADE.**

The weather is fine but too dry for seeding in this immediate vicinity. There have been good rains north and east. This is the kind of weather that makes one feel like sleeping in the woods, listening to the chipmunk sing. I forgot the chipmunk does not sing, and will not get poetical; but you can hear something sing in the woods this time of the year. It is a small bird, known as a mosquito. They sing but one tune, but, my oh! it is "stirring" music. I have just returned from an outing trip and know their tune by heart.

Trade continues good, and it is hard to tell when Fall trade started in, as there has been no dull season so far during the year. Prices are declining on a great many articles. In fact, most all goods are reasonable in price now except such lines as are controlled by combinations, such as shovels, wire and nails, axes and a few other articles. Some goods are too low, and we think there will be some advances. Building is very brisk in our city and surrounding towns. The demand for builders' Hardware is improving and will be good until bad weather sets in.

THE SMITH BROS. HARDWARE CO.

**THE OMAHA TRADE.**

Trade is moving in exceptionally large volume in nearly every line and the prospects for an exceptional Fall trade were never better. One noticeable feature is the exceptional increase in the local demand for wire and nails, owing to the fact that the trade who have ordinarily bought in carload lots have held their stocks down and bought in a local way, and with increased demand comes increased orders for local shipment which taxes the ability of the jobbers to the utmost to handle promptly and keep up stock. Collections are up to the average, and, if present conditions continue, Fall trade promises to be above it.

RECTOR & WILHELMY CO.

**THE ST. PAUL TRADE.**

The business in our territory is not good, because of a great shortage of crop, and there can be no better conditions until next year. We have no total failure, but we have a shortage of 150 million bushels of wheat in the territory we travel, and any one can readily see that this affects all busi-

ness. Still, most of our farmers are in good financial condition and can readily stand an off year.

Our state is Republican, and will give McKinley 60,000 plurality, though the Republican candidate for Governor will probably be elected by 7,500 majority only. This shows that many people have views which they dare to express in their ballots.

Prices are held quite firmly, but large orders and good buyers can get prices nearly to cost.

C. W. HACKETT HARDWARE CO.

#### THE DAVENPORT TRADE.

The political pot is boiling now. Gov. Roosevelt will be here to-day, and there will be a "hot time" in the old town to-night. Notwithstanding the increasing excitement incident to the Presidential campaign, there is great activity in business, and we find difficulty in getting goods, especially staple and seasonable articles enough to satisfy the demand.

There is less cutting in prices than usual, as dealers are too busy to think of throwing goods away.

Rope, which has been on the continual down grade for several months, seems to have hit the bottom at last, for there has been an advance in this market of a quarter of a cent. There is now some speculative demand for rope and fodder twine.

Mr. Charles Ffrench, publisher of *Iron & Steel*, Chicago, favored us with a call yesterday; hope he will come again.

Mr. Robert Sickels, president of this company and manager of Sickels & Nutting Co., 35 Barclay Street, New York, will make us his regular annual visit, leaving New York October 10th. He spent many years of active business life in this city, where he is well known and very much beloved.

Weather perfect, roads smooth, pastures as green as in June. Crops have been abundant, prices fair, factories all running full time, everybody happy.

T. James Fernley, the popular secretary of the National Hardware Association, expects all of the members of the association and their wives in Richmond, Va., in November. There is no doubt but this meeting will be of great benefit and will give much pleasure to all who may have the good fortune to attend.

SICKELS, PRESTON & NUTTING CO.

#### THE SAN FRANCISCO TRADE.

Not a flaw in trade conditions could be detected in the outspoken talk of prominent representatives interviewed by *Hardware's* correspondent on the 2d inst. Such houses as these were visited: Dunham, Carrigan & Hayden Co., Yost-Alexander Co., J. H. Kruse, American Steel and Wire Co., W. S. Ray Mfg. Co., Osborn Hardware and Tool Co., Philpot & Armstrong and Miller, Sloss & Scott.

T. C. Hamilton, member of the Dunham, Carrigan & Hayden Co., director and manager of the shelf Hardware department, who returned October 1st from a buying trip to New York, said: "Everything looks well from our viewpoint, both present and prospective; farmers all over the coast are having abundant harvests and getting good prices and paying the interior merchants who, in turn, are not only paying the jobbers and wholesalers, but sending in good orders. To meet this anticipated activity we too are busy selecting stocks. To-morrow our tools department manager, Charles M. Curtis, will start East for goods."

Passing to the next floor above, your correspondent found himself in the busy bicycle department, where the Dayton, Crawford and the D. C. & H. Co. Roadster are the lines handled. The output from this department thus far this season is a little upward of three thousand machines; and the season in this country is yet in its prime; no end to it till the new 1901 models arrive in December. The veteran cyclist who is at the head of this department as manager is E. E. Stoddard. This manager was not in, having gone East to negotiate for his house with a view of business expansion the coming season. The purpose is to add a motor cycle line and carry automobile parts.

"Trade is looking up well and everything is looking favorable," was the responsive remark of Geo. H. Ismon, successor to Frank L. Brown as Pacific Coast sales agent of the American Steel and Wire Co. Mr. Brown, it will be remembered, resigned in favor of a Chicago office as Western sales agent for the Shelby Steel Tube Co. Manager Ismon, the new sales agent, was Mr. Brown's first assistant, the logical successor having been prominently associated with the company and its predecessors twenty-eight years.

TRADES PRESS ASSOCIATION.

#### The "Gem" Toy Wringer.

The American Wringer Co., 99 Chambers Street, New York City, manufacturers of the Horse-Shoe Brand clothes wringers, in order to meet the great demand for such a toy, are, at the present time, placing on the market the "Gem" toy wringer, of which we give an illustration. While this article can be used as a toy for the children in wringing out

dolls' clothes, it possesses a positive value as a practical wringer for the bathroom which will be appreciated by ladies who wish to wring out laces, handkerchiefs, stockings and other small articles of a similar character.

#### The Rifle Event of the Year.

The National Rifle Association and the New Jersey State Rifle Association Tournament, which is held each year at Sea Girt, N. J., has become the great rifle contest of the world, and at these ranges the rifle experts meet each year to test their skill. This year there were many teams from the various military organizations, both the regulars and the National Guards of the different States, besides other well known rifle organizations. The first large prize contested for was the famous Wimbledon Cup, a magnificent silver piece, valued at \$350. It was presented by the British Rifle Association to the American Association a number of years ago, and is shot for each year on the 1000-yard range; this being the greatest test of skill and ammunition. Two years ago it was won by Lieutenant F. C. Wilson, of Georgia, using King's Semi-Smokeless powder. This year it was won by W. D. Faulk, of Philadelphia, also using semi-smokeless.

Peters cartridges, loaded with King's Semi-Smokeless, won eight of the large prizes, as follows:

Wimbledon Cup, Schuetzen Match, Interstate Military Match, Interstate Regimental Team Match, All Comers' Military Match, New Jersey Rifle Association Trophy Match, Winchester Match, Revolver Re-entry Match, Revolver Team Match.

The results of this tournament show most conclusively the high grade qualities of King's Semi-Smokeless as a rifle and pistol powder, and also show that the 45-70-500 Springfield rifle is by no means a "back number" when accuracy is demanded.

The Peters Cartridge Co. is loading semi-smokeless in all their metallic cartridges, thus placing high-grade ammunition in the hands of sportsmen without any advance in price.

A nugget weighing 1,150 ounces was found recently in the Ural gold mines of Orsk, in the government of Orenberg.

### Pennsylvania Pioneer Blast Furnaces.

Iron ore was known to exist in Western Pennsylvania in the days of the Revolution. In 1780 mention is made of a bed of iron ore in a land transfer on the Youghiogheny, in Fayette County. In 1790, John Hayden, of Haydentown, Fayette County, smelted a small piece of iron from this vein in a blacksmith's fire. He interested John Nicholson, of Philadelphia, then State Comptroller, in a project to erect an iron plant, and as a result the Hayden Furnace in 1792. But before this time William Turnbull, Peter Marmie and Colonel John Holker had erected a furnace on Jacobs Creek, in Fayette County, the first ever put in operation in Western Pennsylvania. It was located about a mile above the mouth of the creek, and was blown in on November 1, 1790.

This pioneer furnace during its operation bore a number of names. It was known as Jacobs Creek Furnace, Alliance Furnace, Alliance Iron Works, Turnbull's Iron Works and Colonel Holker's Iron Works. The old furnace was operated spasmodically until 1802, and, it proving a losing venture, not an uncommon thing with the early iron furnaces in this section, was then abandoned.

Peter Marmie, who was connected with this pioneer attempt at iron making, was a most picturesque character. He was a Frenchman, who came to this country with Lafayette as private secretary. In 1793, after the dissolution of the firm, he was left alone with the furnace and forge. Loss of fortune and shattered ambition drove him to despair, and tradition would have it that on a stormy night he committed suicide by jumping into the fiery mouth of the furnace, first driving in his faithful hounds.

For long years there have been stories of Marmie, "the mad Frenchman," and he is now "the specter huntsman" of that section of Fayette County, and the mountaineers will tell you in all earnestness how, on stormy nights, he can be seen to wind a parting blast upon his horn and disappear in the ruins of the old furnace.

Besides manufacturing implements of peace this old furnace turned out munitions of war. Turnbull was the agent for Pennsylvania during the Revolution, and in 1792 General Knox, then Secretary of War, wrote him to secure shot for the six-pounders at the old furnace. Later shells and shot for the howitzers were furnished, and the shot used by General Wayne in his expedition against the Ohio Indians was manufactured here.

Another historic Fayette County furnace was Union Furnace, on Dunbar Creek, which was put in operation in March, 1791. It was built by Isaac Meason. Two years later it was replaced by a larger one.

The old Fairfield Furnace, on Georges Creek, was built by John Hayden in 1797, and the following year he sold it to John and Andrew Oliphant and Nathaniel Breeding. A few years later the Oliphants became sole owners, and it was at this furnace that the first attempt to use coke as a fuel was

made. Cannon balls used by General Jackson at the battle of New Orleans were cast here. They were rafted down the Monongahela, Ohio and Mississippi Rivers.

Pine Grove Furnace was built in George Township in 1795. It was located on Pine Grove Run, near the present town of Smithfield. The Plumsock Rolling Mill was built in 1794, Laurel Hill Furnace in 1797, Redstone Furnace the same year, and Springhill Furnace in 1794. Cool Spring Furnace was erected in 1816, and New Laurel Hill Furnace in 1820. As early as 1811 a fine grade of steel was manufactured at a furnace operated by Truman & Co., at Brownsville.

Of the old furnaces of Western Pennsylvania none are more interesting than those of Westmoreland County. Ligonier Valley was an important center of the early iron industry, and in 1792 the old Westmoreland Furnace was erected near the foot of Laurel Hill, a few miles from Ligonier. This furnace was built and operated by John Probst, and the following year he built a forge there. At one time this furnace was owned and operated by George Anshutz, one of Pittsburgh's pioneer ironmakers.

In 1802 General Arthur St. Clair built the Hermitage Furnace, on Mill Creek, two miles east of Ligonier. This was after his removal from the Governorship of the Northwest Territory, and he hoped by this venture to retrieve his lost fortunes, but he was unsuccessful, and in the end lost everything, and was forced from his spacious home nearby to end his days in poverty and neglect in a miserable cabin up on the Chestnut Ridge Mountains. In 1808 this furnace was purchased by General O'Hara, of Pittsburgh, and was operated until 1818.

Another interesting Ligonier Valley furnace was old Washington Furnace, the ruins of which can still be seen on the Pittsburgh and Philadelphia Turnpike, a mile above Laughlintown. This furnace was erected by Johnston & McClurg, of Pittsburgh, in 1809, and was operated until about 1856. California Furnace, near by, was erected in 1853, Hillview Furnace was erected by L. C. Hall in 1850, and Oakgrove Furnace in 1853 by Colonel James Clifford. These make up the old furnaces about Ligonier.

Old Ross Furnace, on Tubmill Creek, was built in 1814. It is now on the resort of the Ross Furnace Club, a well-known Pittsburgh organization. Hannah's Furnace, near by, was built in 1810. A new stack was built here in 1842, and the furnace was operated until 1855. Baldwin Furnace, on the Conemaugh, was built in 1818. Old Kingston Furnace, on the Loyalhanna, at Kingston, was built by Alexander Johnston in 1811. In the old Johnston mansion, which stands near by, were born three Governors of as many great States.

The first furnace in Allegheny County was built by George Anshutz at Shadyside in 1792. This pioneer furnace was abandoned two years later because no ore could be found in the vicinity, and the expense of bringing it from the mountains was too great.

Such were the ideas of the industry in those early days, but in the lapse of time wondrous changes have been wrought. No longer is it deemed necessary to erect an iron furnace at an ore-pit. To-day one can find in the stockyards of the great iron plants of this city ores from all parts of the world. Russia, Greece, Turkey, France, Spain, Chili, Cuba and other foreign countries all add their stores of ores to those from the Lake Superior region here in this domain of Tubal Cain.

Before the Shadyside Furnace was built William Porter engaged in the manufacture of iron implements in this city. In 1803, axes, hoes, plows, iron chains, cut and hammered nails and other iron products were made here, and the immigrants who were pouring into the Northwest Territory were supplied with utensils here.

Joseph McClurg established a foundry here in 1803, and in it were cast the cannon which blazed in victory from Perry's fleet on Lake Erie. The first rolling mill in Allegheny County was put in operation in 1812 by Christopher Cowon. It stood at the corner of Penn Avenue and Cecil Alley, and had no

SOLD BY ALL HARDWARE DEALERS.

puddling furnace connected with it. In 1814 this mill was transferred to Stackpole & Whiting, and in 1818 it was owned by Ruggles, Stackpole & Whiting, which firm failed in 1819. This section experienced a financial depression about that time.—*Pittsburgh Dispatch.*

### Kentucky Retail Hardware and Stove Dealers' Association.

In response to the call which was given in full in our previous issue, about fifty Hardware and stove dealers from all over the State held a meeting in the Board of Trade Hall, in Louisville, on the 20th ult., and the organization of a State Hardware Association in Kentucky became an accom-

plished fact. A constitution and by-laws were adopted and the official designation of the association became "The Kentucky Retail Hardware and Stove Dealers' Association." It was decided to apply for membership in the Interstate Retail Hardware Dealers' Association. The following officers were elected for the preliminary term. George Dehler, Louisville, president; J. S. Ogden, Ashland, first vice-president; Chas. D. Winn, Paris, second vice-president; Paul Wagner, Louisville, secretary; Wm. Dehler, Louisville, assistant secretary, and Henry Heick, Louisville, treasurer. C. P. Sanders, I. W. Buchanan, L. S. Johnson, T. R. Mahan and M. P. Lancaster were appointed members of a committee to solicit membership for the organization. The next meeting of the association will convene on the second Tuesday in February, 1901.

### The Profession of Business.

The question is often asked concerning a young man who is starting out for himself in life whether he is going to begin a business or a professional career. The thought that business and the so-called professions are so far apart in all their intents and purposes seems to cling to people with wonderful tenacity.

Why is not business a profession? To the proper and complete success of a career are there any less years of experience and hard work required, any less really technical training and any less study demanded in business than in law or medicine or science? This question does not apply to dabblers, but to the men who are known as successful. Freaks and fakes are as frequently met with in business as in other walks of life. The certain degree of scorn which the great majority of professionals are given to casting upon business men is the scorn born of ignorance and misunderstanding. Because the business man is pursuing the ways that shall return him profits the professional is disposed to look upon him as a miser, a greedy gloater, a man whose life work is on a lower level of human existence than his own.

No so-called professional man ever advanced into a wilderness and opened a country for the sake of settlement and a development of resources—his object was always some scientific research. No professional man ever built mills and produced new fabrics for the sake of establishing a great industry. No professional man ever exchanged his money with the farmer for his grain in order that the latter might move his crops. The world would be in sad plight without the professional man, but it would be in yet sadder plight without the business man, for it is on business and trade that the world exists.

This power and real worth of the business end of life are finding rapid recognition in the present day progressiveness. The country and the world are coming to understand more completely that the technical education of a business man is as imperative to the complete and highest success of his life as is the technical education of the lawyer, preacher and doctor to theirs. Textile schools are yearly becoming more prominent from the strong work that their students are accomplishing and the great universities are establishing elaborate courses in commercial education. The latter are providing systems of business, commercial, corporation and international law, accounting, banking, credits, commerce, treaties, shipping, transportation, colonial systems, finance and many other branches of practical learning, together with foreign languages. This means that the powers of business are being recognized by the great seats of learning in a different manner than at one time—business is becoming a recognized profession. And business is even a greater profession than this indicates, from the fact that actual experience is far more a requirement for success in business than in the other professions.

True worth is not necessarily what other people think of you.

"Yes, we had quite a blowout at our house early this morning."

"Peculiar time for it."

"Yes. The new hired girl blew out the gas in the gas stove, and the gas blew out the side of the kitchen.—*Cleveland Plain Dealer.*"

**THIS ILLUSTRATES OUR STYLE No. 1,**

With one side turned off and the other turned down for a half or night light, or for other purposes where a small light is required temporarily; the little needle valve at the same time removing any obstruction from the rear of the gas orifice. Made in  $\frac{1}{2}$ ,  $\frac{3}{4}$  and 1 foot sizes when the needle valve is withdrawn. Can be turned into alignment.

**If it is a Food Chopper Without a Lid, Don't Buy It.**

A distinguishing and exclusive feature of the STAR FOOD CHOPPER is a plate hinged at the top of the hopper which, when pressed on the food to be cut, forces it upon the feed screw, thus preventing the possibility of injuring or soiling the fingers, which is liable to occur in using the other choppers.

The STAR is unquestionably the best machine of its kind ever offered to the public. It will cut without crushing raw or cooked meat, sea food, fruit, vegetables, etc., into coarse or fine pieces, according to the cutter used, of which three accompany each chopper.

It has eliminated all the objectionable features of other choppers, and has added several improvements that are distinctly its own. It is always in order, and the knives require no sharpening.

No other chopper has the many merits of the STAR. None is more simple in construction or easier to understand or clean. From start to finish in the small points as well as in the large, the STAR FOOD CHOPPER is the best.

# WINSLOW'S ANKLE BRACE 1900.

Patented December 17, 1895.

The only perfect Ankle Support made.

Can be attached to any skate.

We desire to call your attention to Winslow's Ankle Brace. It can be attached to any skate. It is made of steel, handsomely nickel plated, with a rib running through the center which strengthens the brace and makes it light, strong and durable. They are trimmed with the best quality Russet Grain Leather.

There have been many attempts at making an Ankle Brace, but this is the only good one ever offered to the public.

Four years have proved it to be a splendid article. Each pair in a box.

PRICE  
75C.  
PER PAIR.

## Winslow's Double Runner Skate.

This skate is especially adapted for children learning to skate, is strapped and ready for use. The runners are so wide apart that a child can stand on them with perfect ease. They are adjustable and can be made from a 6 inch to a 9 inch skate by simply adjusting the thumb screw.

PRICE, 50 cts. PER PAIR.

THE ABOVE SPECIALTIES ARE MANUFACTURED BY

**The Samuel Winslow Skate Manufacturing Company, Worcester, Mass.**

SEND FOR COMPLETE CATALOGUE.

**ALSO MAKERS OF ALL KINDS OF ICE AND ROLLER SKATES.**

## HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

### New Hardware Stores.

Adrian, Mich.—Geo. E. Greene.  
Alpena, Mich.—G. Sepull, Beck block.  
Coalton, Ohio.—James Rose.  
Dardanelle, Ark.—Abner Lawrence.  
Glasgow, Ky.—Bradford & Myers.  
Lafayette, Ind.—The Jamison-Pierce Hardware Co. has been incorporated. Capital stock, \$3500. Directors, A. R. Jamison, George A. Jamison, William F. Pierce, S. H. Jackson and F. B. Southworth.

Lockport, N. Y.—The Fred D. Morris Co. has been incorporated, to deal in Hardware; capital, \$7500. Directors, Fred D. Morris, Minnie E. Morris and M. Jennie Wicker of Lockport.

Marion, N. C.—Thomas & Lazenby.

Ottawa, Ont.—O'Connor, O'Callaghan & Co., Bank Street.

Tallahassee, Fla.—Letters patent have been issued for the incorporation of the Thomas Hardware & Seed Co., at Gainesville, with a capital of \$50,000. This company will buy and sell Hardware, seeds, furniture and general merchandise. The stockholders are: F. F. Thomas, A. O. Sternberg and James M. Graham.

### Changes and Improvements.

Agency, Ia.—F. L. Lewis has moved his Hardware store to Nira, and expects to make that place his future home.

Alden, Kan.—William Ross has purchased the Hardware business of J. W. Piehler, and will continue the business at the old stand.

Beaver, Pa.—The invoicing of the Hardware stock of J. B. Wilson & Son, in this place, is about completed, after which the store will be in charge of Wilson Bros. of Hookstown.

Beloit, Wis.—Watson & Andre have bought the entire stock of the Beloit Hardware Co., and will remove it to their store.

Bradshaw, Neb.—The stock of Hardware owned by J. H. Buckmaster has been sold to J. Buckley of Henderson. Mr. Buckley has taken possession.

Braymer, Mo.—W. H. Craig & Sons have sold their Hardware store to Merrit Goddard and P. S. Proctor.

Cherokee, Tex.—Jno. Walker has bought J. D. Hill's interest in their shop and Hardware business.

Clearmont, Mo.—Garrett Brothers have bought the Buckner Hardware store and taken possession.

Cohocton, N. Y.—A new plate glass front has been put into the Harris Hardware store, occupied by the Geo. W. Peck Co.

College Corner, O.—Wright & Reed will move their stock of Hardware, etc., bought of W. M. Routson, to their room in the Wilson & Hanna Block.

Crookston, Minn.—Thompson & Bustard, who have been engaged in the Hardware business at 118 Robert Street for the past two years, have decided to close out their stock.

Delta, Ia.—Cap. Sampson has sold his Hardware store to Ball & Bollinger.

Fairmount, W. Va.—The large Hardware establishment on Main Street owned by D. N. Snyder & Co. has been purchased by B. Hood and Fielding Clelland, both of this city.

Fergus Falls, Minn.—Brockhoff & Spiekerman have rented the Shacht Building and will move their Hardware stock there.

Galena, Ill.—A business deal has been consummated whereby C. A. Asmus has come into possession of the stock of tin and Hardware formerly owned by the late John Heid, whose place of business was on lower Main Street. Mr. Asmus will remove his purchase to his place of business.

Hoytville, O.—Geo. Brooks has purchased the Hardware stock of Jeff Richcreek.

Ironton, Wis.—L. Goedecke, of the firm of Matthews & Goedecke, has purchased the Hardware business of W. H. Crook.

Lena, Ill.—L. D. Overstreet of the Northside Hardware store, has bought the Fleming property on Mason Street. He will remodel and enlarge the house before occupying it.

Lovington, Ill.—Jenne & Beckman, Hardware and furniture dealers, have begun moving their old building out into the street preparatory to erecting a fine brick building on the site. The structure will be 28x94 feet, two stories with a basement 28x40. The front will be of plate glass and steel. The firm will occupy the basement and lower floor.

Mankato, Minn.—A deal has been closed whereby G. H. Culver and M. A. Culver of Minneapolis, formerly of Britton, S. D., become proprietors of the Hardware store of Charles Macbeth. The new firm will be known under the name of Culver Bros.

Maple City, Ill.—Seeley & Peterson have dissolved partnership in the Hardware business, and it will be conducted hereafter under the firm name of Peterson & Co. Mr. Peterson will be manager.

Moscow, N. Y.—Brophel & Co. have purchased the building site of C. N. Stoble, where they will erect a store for Hardware, agricultural implements, buggies, wagons and carriages.

Perry, N. Y.—E. N. Cooper, Hardware dealer, has sold a half interest in his business to F. V. Moore of Addison, who will personally have charge of the store.

Scribner, Neb.—Wm. Eidam has sold his Hardware store to F. H. Ranslem.

Sioux City, Ia.—The Knapp & Spencer Hardware Co. has leased as a warehouse the east 150 feet of the old Sioux City & Northern warehouse, on Second Street,

between Jackson and Nebraska Streets, vacated when the Great Northern withdrew from use of the terminal company's facilities here.

St. Joseph, Ill.—C. W. Gibson is making preparations to build an extension of about twenty feet on the rear of his brick store room occupied by J. E. Harvey. When it is completed he will move his stock of Hardware to that location.

Toledo, O.—The Starr Avenue Hardware Co. will remove to new quarters this month in the Pilliod Building, corner of Starr Avenue and Platt Street.

Vesper, Wis.—The Johnson & Hill Co. have purchased the stock of Hardware of T. J. Evans.

Victor, N. Y.—Charles F. Frayer, who has been engaged in the Hardware business for several years, has disposed of his stock to his father, John P. Frayer, who will conduct the business in the future.

Wakarusa, Ind.—Yoder Brothers have moved into their handsome new quarters. They occupy two floors one hundred feet deep, and the basement.

Washington, Ia.—D. C. Olive has purchased the Hardware store of John H. Augustine.

### Business Embarrassments.

Baltimore, Md.—Joseph Erwin Albert has instituted suit in the Circuit Court for the appointment of a receiver for the Baltimore Hardware Co., 501 West Baltimore Street.

Montreal, Canada.—James Johnston, Hardware merchant, has assigned at the demand of Mrs. James Johnston, with liabilities of about \$2,500.

St. Louis, Mo.—George W. Kurtzeborn, President of the Mound City Hardware Co., has filed a petition in voluntary bankruptcy. Liabilities, \$35,756.50; assets, \$19,153.

PATENT PENDING.

STORE LAMP.

THE

M. & M.

(TRADE MARK)

Arc Lamp

450 CANDLE POWER

Burns 12 to 15 Hours with  
One Filling.

THIS is an air pressure lamp  
with overhead generator,  
which produces a light equal in  
brilliancy to any commercial

arc. We do not claim more than our lamp will do, but leave it to those who see it to judge  
of its candle power and light-distributing qualities. We do not claim 100 candle power  
and give you 40. Every lamp is guaranteed to do all we claim for it. It is made en-  
tirely of brass, of the heaviest gauge of any gasoline lamp made, and there is no reason  
why a lamp should not last for fifty years.

ABSOLUTELY PORTABLE.

Finished in Oxidized Copper. Presents a very handsome appearance.

It has been passed by Board of Underwriters without penalty. It is absolutely non-explosive. No  
smell; no smoke. You cannot only own your own gas plant, but electric plant as well,  
as our claims are not in excess of what we produce.

MARTIN & MOREHEAD, 53 W. Washington Street,  
CHICAGO.

PATENT PENDING.

STREET LAMP.

## HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

### New Companies, Etc.

Appleton, Wis.—The Wisconsin Wire Co. have been incorporated, with a capital stock of \$15,000, for the manufacture of paper machine wires, dandy rolls, jackets and other woven wire specialties used by paper manufacturers.

Boston, Mass.—The Hatch Automatic Damper Co. has been incorporated, with a capital stock of \$5,000. President, T. C. Hatch; treasurer, R. S. Barrows.

Buffalo, N. Y.—The Buffalo Tool & Machine Co. has been incorporated, with a capital stock of \$15,000. Directors: Robert Bartel, Charles Hood and Frank H. Button, of Buffalo.

Camden, N. J.—The Philadelphia Rubber Co. has been incorporated to buy, sell and manufacture rubber goods; capital, \$50,000. Incorporators, W. H. Barnard, Alice Arment, T. D. McGlathey.

Canal Dover, O.—The Dover Mfg. Co. has been organized with a capital of \$100,000, and the plant of the Sad Iron Co. of Stoughton, Wis., has been absorbed by the new company. Plans and specifications for the new factory have been made, and Chas. T. Johnson expects to be ready for business in the new location by the first of next year.

Canton, O.—The incorporation of the Essig Window Co. has been authorized by Secretary of State Kinney. The corporation is formed for the purpose of manufacturing and dealing in the Essig patented window devices and all subsequent improvements pertaining thereto, and of manufacturing and dealing in window supplies. The capital stock is fixed at \$25,000. The incorporators are: Ozian A. Essig, William A. Hammerly, Peter G. Williams, Martin O. Richards and Harry V. Williams.

Chicago, Ill.—The American Steel Tool Co. has been incorporated; capital stock, \$10,000. Incorporators, Raymond O. Evans, Edgar J. Pratt and Benjamin M. Frees.

Dodge, Mass.—A wooden building with water power has been leased by F. B. Dodge to H. L. Page of Dudley, who will occupy it for the manufacture of knives. This will be a new industry for the place.

Kansas City, Mo.—W. J. Smith will begin, in a short time, the manufacture of farm implements. For the present he will use a two-story building 90 by 120 feet at the corner of Lexington and Guinotte Avenues, and will make hay presses, plow shares and cultivator shovels.

Millville, N. J.—Peterson's new paint works, at the corner of Fourth and Pine Streets, has begun operations.

New York, N. Y.—The Trebor Mfg. Co. has been incorporated, to manufacture door locks and fastening devices. Capital, \$10,000.

Directors: Thomas W. Fox, Bernard Biglin and R. J. Fox, of New York City.

Philadelphia, Pa.—The Safety Kerosene Stove & Light Co. has been incorporated; capital, \$5,000.

Portland, Me.—The New England Mica Co. has been organized at Portland, for the purpose of carrying on a general mining business, with \$50,000 capital stock. The officers are: President, Ernest Mendum of Melrose, Mass.; treasurer, Geo. W. Mansfield of Melrose, Mass.

Tacoma, Wash.—The Eureka Automatic Scale Co. has been incorporated; capital stock, \$10,000.

### Changes and Improvements.

Findlay, O.—Walter C. Stone, who was general manager of the Salem Wire Nail Mill, in this city, for several years, and who was transferred to the New Castle, Pa., mills two years ago, has been transferred to Anderson, Ill., mills.

Fulton, N. Y.—The plant of the Fulton Pulley Co. has been sold to the Oneida Steel Pulley Co., which was recently organized, for a consideration of \$40,000.

Grand Rapids, Mich.—The Keeler Brass Co. are to build a two-story factory on Godfrey Avenue, at a cost of \$10,000.

Hanover, Mich.—The Electric Oil Stove Works have been moved to Jackson, where they will be consolidated with another factory of the same kind. The business was started in 1890 by B. F. Goodrich. It was purchased last December by H. L. Smith, of Jackson.

Highland Park, Ill.—The vacant Grey electric factory building is to be used as a tinware factory.

Kanawha City, W. Va.—The nail works, which have been shut down for about six weeks, have resumed operations under the name of the Norton Iron Works, a new company having leased the plant. T. M. Adams of Ashland, Ky., is President of the company, the principal office of which is located at Ashland. John P. Chenoweth, who was general manager under the old company, will continue in the same capacity. The new company will employ 250 men and will manufacture wire and wire nails. A branch plant at Ashland will manufacture cut nails.

Marietta, O.—The Leidecker Tool Co. have broken ground for the erection of another addition to their works on Second street. The new building will be 55x35 in dimensions and two stories high and will be used for the engine department. It will be pushed to completion as soon as possible, so as to have the machinery installed before cold weather.

Philadelphia, Pa.—Plans have been made for a large addition to the glue factory at Ontario and Braband Streets for A. Berg & Co. The plans show the new addition to be of brick and iron, measuring 16x79 feet.

Pittsburgh, Pa.—The American Iron &

Steel Mfg. Co. will begin at once the erection of a bolt works on Neville Island, having recently purchased the James Hamilton farm of 27 acres for \$67,500. The company now has two works in operation, one at Lebanon and the other at Reading. Its capital stock is \$20,000,000.

Springfield, Mass.—A petition has been filed asking for the dissolution of the Seymour Cutlery Co. for the reason that the company has sold and transferred all its property and paid all its debts, and completed the work for which it was organized. The petitioners are Samuel R. Whiting and Albert H. Seymour, who claim to hold \$12,600 of the company's total \$25,000 stock, and the court has fixed the first Monday in November as a date for all interested to appear and show cause why the petition should not be granted.

Tacoma, Wash.—Ben Moyses, A. Winberg and W. H. Pritchard have purchased an extensive interest in the Pacific Pulley Co. The deal has just been consummated, and the reorganized company will take possession at once. This will mean an enlargement of the plant of the company and the immediate increase of its output. The company has a location on the East Side, in the centre of the manufacturing district.

Wausau, Wis.—The capital stock of the Northwestern Flint & Sandpaper Co. has been increased from \$50,000 to \$100,000, and extensive additions to the plant are contemplated.

Worcester, Mass.—The Washburn Wire Co. has acquired a controlling interest in the plant of the American Electrical Works, located at East Providence, R. I., makers of bare and insulated copper wires, and will not build a copper wire plant, as has been reported. The management of the Washburn Wire Co. has been very reluctant to bring additional wire machinery into operation, and secured a location for its works immediately adjoining the plant of the American Electrical Works in order that this purpose might be accomplished.

### Recent Fires.

Crofton, Ky.—The large ax handle factory of Randolph & Simmons has been destroyed by fire, together with all its contents. The origin of the fire is not known, but is believed to have been incendiary. The building will be rebuilt at once and the factory will resume operations. The loss is heavy, with \$2000 insurance.

### Miscellaneous.

Wichita, Kan.—At a meeting of the directory of the new Buckeridge Pump Co., the permanent officers of the firm were elected. They are: President, J. C. Durst of Denver; vice-president, C. L. Davidson; secretary and treasurer, M. J. Loyd; general manager, A. T. Buckeridge. The pump company has already secured a charter and will commence business with a capital of \$10,000 and with the privilege of using \$50,000 capital if they may desire.

## Columbian 1000-Shot Air Rifle.

Patented  
Oct.  
24, 1893.

CHAMPION  
MODEL.

This Air Rifle possesses advantages over all the Air Rifles now on the market. The materials used in its construction are the best. The appearance and workmanship is far ahead of any other Air Rifle made. It has an adjustable sight it shoots stronger and more accurate, less liable than any other to get out of order, all parts are interchangeable. We think we have the right to claim this as the "Champion" of all Air Rifles.

List, per doz., Kameled, \$30.00; Full Nickel, \$42.00.

 AKRON, OHIO.

## PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

## If it is a Food Chopper Without a Lid, Don't Buy It.

A distinguishing and exclusive feature of the STAR FOOD CHOPPER is a plate hinged at the top of the hopper which, when pressed on the food to be cut, forces it upon the feed screw, thus preventing the possibility of injuring or soiling the fingers, which is liable to occur in using the other choppers.

The STAR is unquestionably the best machine of its kind ever offered to the public. It will cut without crushing raw or cooked meat, sea food, fruit, vegetables, etc., into coarse or fine pieces, according to the cutter used, of which three accompany each chopper.

It has eliminated all the objectionable features of other choppers, and has added several improvements that are distinctly its own. It is always in order, and the knives require no sharpening.

No other chopper has the many merits of the STAR. None is more simple in construction or easier to understand or clean. From start to finish in the small points as well as in the large, the STAR FOOD CHOPPER is the best.

**CHAS. D. BROWN, Agent,**

# HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. *Size of page, 4 x 7 inches.*

FOUR EDITIONS:

- A, 200 pages, - - \$1.00

A F, 200 pages with flap, 1.25
- A 2, 400 pages, - - \$1.50

A F 2, 400 pages with flap, 1.75

Price Book B.

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. *Page, 4 x 7 inches.*

FOUR EDITIONS:

- B, 200 pages, - - \$1.00

B F, 200 pages with flap, 1.25
- B 2, 400 pages, - - \$1.50

B F 2, 400 pages with flap, 1.75

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. *Page, 4 1/2 x 8 inches.*

FOUR EDITIONS:

- C, 200 pages, - - \$1.00

C F, 200 pages with flap, - 1.25
- C 2, 400 pages, - - 1.50

C F 2, 400 pages with flap, - 1.75

Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. *Page, 5 x 8 inches.*

FOUR EDITIONS:

- D, 240 pages, - - \$1.50

D F, 240 pages with flap, - 2.00
- D 2, 480 pages, - - 2.50

D F 2, 480 pages with flap, 3.00

Price Book D.

## MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers, turn to **AU**

" Parers, Apple " **PA**

For Chisels, turn to **CH**

" Cutlery, " **CUT**

For Iron, turn to **IRO**

" Irons, " **IR'S**

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

## BRILLIANT SELF-MAKING GAS LAMP.

Bright as Sunlight and Nearly as Cheap as Daylight.

Everybody can have good light; PURE, STEADY INCANDESCENT. BRIGHTER than ELECTRICITY or GAS, CHEAPER and SAFER than KEROSENE.

The one reliable lamp that is always right and ready for use, never out of order, and will be just as good in 10 years from now.

Portable and convenient. ABSOLUTELY SAFE. Anybody can run them. One quart filling gasoline burns 18 hours requiring no attention. No wick, smell or smoke.

More Brilliants used than all the others combined. Accepted and approved by the Insurance Companies.

Money saved by their use will soon pay first cost.

We are the sole owners and manufacturers of the Brilliant and have made lamps 35 years. Write for illustrations and prices. Agents Wanted.

## WINSLOW'S ANKLE BRACE 1900.

Patented December 17, 1895

The only perfect Ankle Support made.

Can be attached to any skate.

We desire to call your attention to Winslow's Ankle Brace. It can be attached to any skate. It is made of steel, handsomely nickel plated, with a rib running through the center which strengthens the brace and makes it light, strong and durable. They are trimmed with the best quality Russet Grain Leather.

There have been many attempts at making an Ankle Brace, but this is the only good one ever offered to the public.

Four years have proved it to be a splendid article. Each pair in a box.

PRICE  
75c.  
PER PAIR.

## Winslow's Double Runner Skate.

This skate is especially adapted for children learning to skate, is strapped and ready for use. The runners are so wide apart that a child can stand on them with perfect ease. They are adjustable and can be made from a 6 inch to a 9 inch skate by simply adjusting the thumb screw.

PRICE, 50 cts. PER PAIR.

THE ABOVE SPECIALTIES ARE MANUFACTURED BY

This Trade Mark is stamped on all Hardware Specialties of my make.

For Hand, Band and Jig Saws, from the widest made down to 1-2 inch. The Sets are too well known for me to enlarge on them.

Write for Catalogue. **CHAS. MORRILL,** Broadway Chambers, Broadway and Chambers St., N. Y.

## YOU COULDN'T BREAK IT WITH A SLEDGE

But it's lighter, stronger, handsomer and more desirable in every way than any other register made.

Every dealer and nearly every house-holder who has furnace heat, knows that there's a vast amount of breakage in cast iron registers.

## NOVELTY "NEVER BREAK" Stamped Steel Registers.

Are practically indestructible. They are made of polished steel plate which takes a much finer finish than cast iron either in Japan or electro plate and are really worth more than double. Prices will surprise you.

Order before your neighbor gets them.  
Can we send you catalogue?

## RUBEROID ROOFING

Imitations, though flattering (to the imitated) are seldom satisfying (to the user).

STANDARD PAINT CO.

The nearest thing on the market to an "imitation" of P & B Ruberoid Roofing is an organization of tar and paper. You will realize how close this imitation is when we tell you that in our Ruberoid there is not a bit of tar nor a bit of paper. We do not use them because the tar melts and runs under heat and the paper rots and tears. P & B Ruberoid does not melt, does not tear, does not rot! It LASTS! Because its backbone is FELT of the best quality saturated with the P & B compound that does not dry out, and it is the only composition that will not. Proof against weather, water, heat, steam, acid, gases, alkali, etc.

**THE STANDARD PAINT COMPANY,**  
85-87 John St., NEW YORK.

# HARDWARE

At a meeting of the Board of Governors of the Hardware Club, on October 15th, the following new members were admitted:

J. W. CLEVELAND, Paterson, N. J.  
MELVILLE E. STONE, 195 Broadway, New York.  
JOHN A. STRALEY, 256 Broadway, New York.  
LOU D. SWEET, Franklin, Pa.  
CHAS. H. TIBBITS, International Silver Co.,  
Wallingford, Conn.

The Nicholson File Co., of Providence, R. I., stated to our representative the other day that there seemed to be a more pronounced and general feeling of confidence on the part of buyers. Stock orders in considerable numbers are putting in an appearance, denoting that the trade not only feels that prices are more stable, but also has confidence in a larger demand in the near future.

Chas. A. Penny has been appointed general purchasing agent for the Crane Company, manufacturers of wrought pipe and general steam fitters' and plumbers' supplies, Chicago. Mr. Penny for a number of years was identified with the Hardware trade, having been buyer for the well-known firm of A. F. Seeberger & Co., of Chicago, and later secretary of the Woodrough-Hanchett Co., also of Chicago.

At a meeting of the Executive Committee of the Business Men's Republican and Sound Money Association, the following resolution was adopted by the Executive Committee:

*Resolved*, That the business men of Greater New York be requested to co-operate with the Business Men's Republican and Sound Money Association in making November 3 a holiday in as far as possible by closing their places of business on that day, to enable their employees to participate in or view the parade; and that copies of the resolution be furnished to the daily and various trades papers.

The Charles Parker Co., Meriden, Conn., manufacturers of the well-known Parker vise, take pleasure in stating that 206 out of a specification for 207 vises that were required by the United States Government for the Rock Island Arsenal were ordered as Parker's.

A transfer of honor and responsibility to young men, such as is noticed frequently on the part of large corporations, has recently been made to one of the younger members of the Hardware Club, Ross M. Turner, he having been made manager of the New York City office of the Mutual Mercantile Agency, 305-309 Broadway. Mr. Turner has established himself in the business world by careful and thorough methods in furnishing Foreign Mercantile Reports, and his transfer to a field very much larger cannot do otherwise than result profitably to his company and be of service to the business men of New York, and in the Hardware trade and Club, where he is well known.

Prompt and generous invitations were extended by the Wool Club, Wool Exchange Building; the Fulton Club; the Merchants' Club, 106 Leonard Street, and the Arkwright Club, tendering to the members of the Hardware Club the privileges of their club rooms so long as they shall be temporarily deprived of the use of their own. These generous invitations were officially accepted on behalf of the Hardware Club.

A special meeting of the Board of Directors of the Stanley Rule and Level Co., New Britain, Conn., was held on the 8th inst., in order to vote on the changes made necessary by the death of Frederick N. Stanley. The following officers were elected: C. E. Mitchell, president; C. B. Stanley, treasurer, and A. W. Stanley, secretary.

A meeting of the Board of Directors of Landers, Frary & Clark, of New Britain, Conn., was held on the 15th inst. to fill the positions made vacant by the death of Charles S. Landers. In the election which followed, Charles F. Smith was elected president and George M. Landers treasurer. The other officers remain as heretofore: Francis B. Cooley, vice-president; George M. Landers, secretary. Henry C. Judd, of Hartford, was elected a director of the company.

The Hardware Merchants and Manufacturers' Association of Philadelphia held their usual monthly meeting at their rooms in The Bourse building on Tuesday evening, October 16. The routine business was speedily disposed of, when an adjournment was made to the restaurant on the eighth floor and an exceedingly good collation was served to members and guests, who numbered in all about seventy-five persons. Resolutions were passed during the course of business expressing regret at the death of two prominent members of the National Hardware Association, Charles S. Landers, of Landers, Frary & Clark, and F. N. Stanley, of the Stanley Rule and Level Co.

Active preparations are being made in connection with the programme of the Sixth Annual Convention of the National Hardware Association. Although not entirely completed, it is announced that at the session on Wednesday, November 21, addresses of welcome will be delivered by Governor Tyler, of Virginia, and Mayor Taylor, of Richmond, and possibly some of the leading citizens representing the commercial interests. Delegates from the National Hardware Association of Great Britain and the Canadian Wholesale Hardware Association will be present. The annual address of the president will be read, as well as the report of the secretary-treasurer, after which a colloquy on the subject, "Is the Jobber Essential as a Distributor or Should Manufacturers Perform This Service?" will be held, which will be participated in by some of the most prominent men at the head of the various manufacturing institutions of the country.

On Wednesday evening a mock trial will be held in connection with the smoker. The object of the mock trial is to pass upon a petition in lunacy which has been filed by the creditors, customers and competitors of a certain concern, the allegation being that the members of this concern are evidently insane, or they would not attempt to conduct their business as they do. All the talent connected with this trial will be taken from the ranks of the members of the Association and the visiting manufacturers.

On Thursday evening another colloquy will be held, the subject being, "Market Conditions Are Not Present Values on a Reasonably Sound Basis." This event, of course, will be open to all manufacturers and visitors.

On Friday the annual banquet of the Association will be given. Already a larger number of delegates have engaged rooms for the convention than has been the case on any previous occasion. The manufacturers who visit the convention will be made quite welcome, and a large number of them have signified their intention to be present.

The office of the Hardware Publishing Company has been removed to Broadway Chambers, Nos. 273-277 Broadway, New York.

## Editorial Trade Review.

Reports from the several trade centres indicate that general business keeps up in an excellent ratio, as compared with previous seasons, and especially the preceding months of the year.

While the orders received by the jobbers give prominence to the fact that no large stocks are being ordered, a much more general assortment of goods is carried in consequence, and the stocks on the average are more carefully looked over, so that no absolute scarcity shall prevail in any particular line.

One good thing, the present year is one of such generally prosperous conditions, that the demands of business

keep the workers from too much political shouting and neglect of their usual vocations. Business in consequence pursues the even tenor of its way, and everybody is satisfied that the future is full of promise, and only requires to be carefully looked after to reap profitable results and justify promising expectations.

There is no doubt that large amounts of capital awaiting investment are held up until the result of the approaching election is definitely obtained. Important enterprises at the present time are held in abeyance; many plants on the eve of being started are standing still because hesitating capitalists want to know to a dead certainty, before proceeding further, that by a large majority the people are satisfied with the present Administration; and that there will be no change in the prosperous National policy that has produced such happy results during four years past.

Should the election justify the hope, enterprises now under consideration will be pushed ahead in every section of the country, that will employ thousands of workmen independent of the many thousands at present idle from trade developments, causing the cessation of labor in a number of plants extremely active until within a few months. What the capitalists require is that safe feeling following investment, which indicates the nominal security of our country's best aspirations, and the certainty that anarchistic tendencies have again been relegated to the rear.

Prices have reached the steady, solid ground floor, having declined gradually and by degrees to an undoubted bottom on lines too numerous to count. Many manufacturers that have been hovering between a desire to sell and a possibility of a profit, have reached a stage where the quoting power is braced up by prevailing conditions, and higher prices or more rigid requirements give the market a solidity that a month ago even was not its prevailing characteristic.

Many seasonable goods are even now in indifferent supply, and any unusual demands would be difficult of attainment. The jobbers have lessened the large stocks they were carrying in the Spring, in many cases by judicious unloading among their brother jobbers, reciprocated to its fullness from the stocks thus evened up, and by pursuing a conservative policy of this sort, it is evident that the stock demands for 1901 will be more uniformly regular as to assortments and quantities than has been the case for a number of years.

Export trade gives no indication of lessened activity; everyone interested in its promotion is doing his level best to increase the lines of specialties which are so gradually, and yet surely, finding a growing and progressive market abroad. A number of department stores on the American plan are contemplated in the large cities of Great Britain and the Continent, and when these are inaugurated we may look for a repetition of the success achieved here in the States in the marketing through such popular-price methods of vast numbers of our labor-saving contrivances, more especially of a domestic character, that have found customers here through low prices and persuasive advertising. It is in the nature of things that our finer high-grade tools would reach a larger community of interest in labor-saving devices, through such cheaper methods of sale as those afforded by department store methods in cities where such modes of introducing goods have not previously prevailed.

### Business Men's Sound Money Parade.

In the Business Men's Sound Money Parade, which will take place on Saturday, November 3d, the Hardware and Metal Trades will, as was the case four years ago, furnish a division. It will be under the marshalship of Alfred D. Clinch, of Underhill, Clinch & Co. A number of committees have been appointed having reference to the success to be achieved on this occasion, remembering the fact that in the previous parade the large number representing the Hardware industry that turned out on that occasion excited the most favorable comment. The executive committee, which consists of a number of the leading members of the important houses in the trade, is headed by George H. Sargent, of Sargent & Co., as chairman; William H. Cole, of Tower & Lyon, being secretary, and William H. Donaldson, of the Russell & Erwin Mfg. Co., treasurer. A circular has been distributed in the interest of this affair throughout the trade generally, and it is hoped that a liberal response will be made not only in the number of those that will participate, but also in the checks that will be forwarded to assist in the proper equipment of the division, which renders necessary more or less expense. The circular distributed requests notifications being sent to the secretary having reference to the above.

### Course in Artistic Metal Work.

The Pratt Institute of Brooklyn, N. Y., has established a course of instruction in artistic metal work, to be given in 60 days of tuition. The instruction will be furnished in day and evening classes, the fees being \$15 for the day course and \$5 for the evening course. The aim of the institute in this course is "to qualify young men to enter the profession as artist artisans, equipped not only with artistic appreciation and power of execution, but also with a knowledge of the requirements of the trade, thus dispensing with the usual apprenticeship necessary to the adjustment of principles to practice." Further information regarding the course may be obtained from Walter S. Perry, Director of the Department of Fine Arts, Pratt Institute, Brooklyn.

### Death of Levi D. Frost.

Levi D. Frost, the well-known carriage bolt manufacturer, died at his residence in Marion, Conn., Sunday, October 14. His death was due to heart failure brought on by gastritis. He was 70 years of age. His death was very sudden, he having been in good spirits only the day before. Mr. Frost was born in Southington, October 10, 1830. His whole life was spent in that town, where he had been engaged many years in the carriage bolt business. He was always industrious and was a most successful business man. By his untiring energy he built up a prosperous business and a standing among the trade which was widely recognized throughout the country. The Frost bolt plant was established in Marion in 1842 by Ira A. Frost, who at first forged bolts by hand with the help of a few crude tools. At the old homestead where the elder Frost lived the blacksmith shop was located, where the bolts were first forged, and where the business was begun which was afterward so prosperous. L. B. Frost & Sons conducted the business for a while, but it was not altogether successful, and was closed up in the early '60s. In 1865 L. D. Frost started in the bolt business, and pushed it until it reached a most prosperous condition. It was the industry of Marion, and in its success is held the well being of about sixty or seventy of the inhabitants. As a business man, Mr. Frost was capable and keen of transacting an unusual volume of business, retaining this faculty until his death. When addressed, he was very genial, a good man to meet, and esteemed by all who knew him, especially by the citizens of Marion. In a quiet way he did much for charity, and through his death an ever ready helping hand will be

missed by many. Mr. Frost was married in 1852 to Miss Cornelia Thorpe. Mrs. Frost is still living in Marion with her two daughters, Mrs. Howard Williams and Mrs. C. I. Stone. The funeral services were held on the Wednesday following his death, and were very largely attended.

### Sixth Annual Convention of the National Hardware Association.

The National Hardware Association will hold its Sixth Annual Convention in Richmond, Va., November 21, 22 and 23. The official headquarters of the convention will be at The Jefferson, which is not only a hotel in the ordinary sense of the term for the accommodation of travelers and transient visitors to the city, but has all the attractions to be found in the Northern hotels during Summer and in the Southern hotels during Winter. It has accommodations for 500, and possesses one of the most complete convention halls in the country, and is made brilliant by hundreds of electric lights, possessing an ample stage and a seating capacity for over 1000 persons. There will undoubtedly be a large attendance of jobbers to the convention, as the conventions have always been popular, and have been attended also by many of the representative manufacturers in the industry. The letter received from Secretary Fernley in regard to the matter states:

"It is not the policy of our association to send out any engraved invitations, and yet, as you know, manufacturers and their representatives have always been made welcome, and there will be no exception to this rule at the time of our next convention.

"We have arranged with the railroad companies to allow regular convention rates to all who attend the convention—whether delegates or visitors. It will be necessary, however, when purchasing a ticket to Richmond, to ask for a certificate, setting forth the fact that the purchaser intends to visit the convention of the National Hardware Association. This certificate, when duly countersigned in the convention, will entitle the purchaser to a return ticket for one-third (1-3) fare paid originally. The return ticket, however, must be used over the same route as that taken in going to Richmond.

"At least two (2) sessions of the convention will be open to you, and the social features will be arranged in such a manner as you may also participate, on the same basis as the convention delegates.

"From the assignments for rooms already made, we are sure that this convention will be in every way a great success."

### Fire at the Hardware Club.

The fourteenth or top floor of the fireproof Postal Telegraph Building, Broadway and Murray Streets, New York, is occupied by the Hardware Club, and in the mezzanine floor and superstructure on the roof is placed their storeroom and kitchen. A fire started on the evening of Tuesday, the 16th, in the storeroom, about the time when the last one of the employees was departing. It was, fortunately, discovered in time, and an alarm being given, the Fire Department was soon on hand. The fire was under control in the course of half an hour or so, being confined to the woodwork and furnishings of the kitchen and the contents of the storeroom, where considerable damage was done among the wines and other dining-room supplies. It did not get beyond these rooms. Many of the valuable furnishings in the other rooms of the club were saved from damage by the Insurance Patrol, so that none of the paintings of the club were subjected to any loss, the fire not reaching the reception-room. With the exception of crippling the elevator service for a few days, and the necessity for getting rid of the effects of the surplus water which was liberally supplied during the fire, the club does not present evidence of a great deal of serious damage; and it is the opinion of the Board of Governors, expressed in a circular distributed to the members, that not more than a few weeks will be necessary to put the rooms in a satisfactory condition.

## LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law,  
No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 277 Broadway, New York City.

**QUESTION.**—Kindly answer the following question through the columns of your valuable paper: A year ago I made a note, payable in thirty days. A friend of mine indorsed the note. The note has never been presented for payment, and although I did not know the payee's address and therefore couldn't write to him I held the money in readiness about two months or more. I would like to know whether I am still liable on this note, and whether my friend is liable as indorser.

**REPLY.**—Presentment for payment is not necessary in order to hold the maker of a note, and the payee would in New York have six years after the note fell due within which time to commence an action to recover on the note. But presentment for payment is necessary in order to charge the indorser, unless the instrument was made or accepted for his accommodation, and he has no reason to expect that the instrument will be paid if presented. A delay in making presentment for payment is excused when delay is caused by circumstances beyond the control of the holder of the note, and is not imputable to his fault, misconduct or neglect. We are of the opinion, therefore, that you are still liable on the note as maker, and that if the holder can show that he was prevented from making presentment of the note by circumstances beyond his control, and that he presented the note as soon as possible, the indorser may still be held. If he is unable to show this the indorser is released.

**QUESTION.**—I am the administrator of my father's estate. Before my father died, my sister died, and my father instructed a certain undertaker to make the proper preparation for her burial, agreeing to pay for the funeral in installments. My sister owned some real estate, but my father left nothing of any importance but his debts. This undertaker says that my sister's estate is liable for her funeral expenses. Can he get this property, or must he come in as a creditor of my father's estate?

**REPLY.**—There is a statute in this State which provides that real property of the decedent can be liable for funeral expenses of the deceased person; and under this statute, if the funeral expenses were incurred, and the father had agreed to pay for these services out of his daughter's estate, we are of the opinion that the real property of the daughter would be liable for the debt, provided the father was the administrator of the estate and had authority to bind the estate in this way. If, however, the father assumed this expense himself, personally, and the arrangement was satisfactory to the undertaker, we are of the opinion that the undertaker's claim would be against the estate of the father and not the daughter. In this case, possibly the only way in which the undertaker can reach any portion of the daughter's property would be to force the administrator of the father to collect the amount expended by the father out of the daughter's property, as a debt due the father's estate. But even under these circumstances the undertaker would get only his pro rata share with the other creditors; and it is in our opinion very questionable whether the administrator of the father's estate, under the circumstances recited, would have any right to collect the claim in this way.

**QUESTION.**—An uncle of mine died a short time ago and by his will left me \$1000. My uncle made his will about five years ago, and I was present when he signed the will. I and my brother and a doctor were the witnesses. I have been told that a witness to a will cannot receive anything from it, and I should like to be informed whether the fact that I was a witness to the will would in any way prevent my receiving the \$1000 he left me.

**REPLY.**—Under the laws of New York State if any person is a subscribing witness to the execution of any will wherein any beneficial devise, legacy, interest or appointment of any

real or personal property shall be made to such witness, and such will cannot be proved without the testimony of such witness, the said devise or legacy shall be void. In New York except in certain cases the testimony of at least two subscribing witnesses is necessary to admit a will to probate, but it is not unlikely that your testimony would be required if you were within the jurisdiction of the court; and if your testimony were necessary to the proving of the will your legacy would fail and you could not collect it. You might still be able to save your legacy by remaining out of the State until the will was admitted to probate. If you kept out of the jurisdiction the will would probably be admitted without your testimony if the two remaining witnesses were still alive and within the State.

## Mason's Electrical Specialties.

James H. Mason, 172 West Broadway, New York, whose advertisement will be found upon page 38 of this issue, is the inventor of a number of electrical appliances that are designed for home use more particularly. We illustrate the electric motor, marketed under the name of The Oddo No. 2, which is a powerful motor for its size, invested with a number of special improvements introduced by the inventor. It is

THE ODDO No. 2.

portable in size, weighing but 21 ounces, and but 3 1-2 inches in height, but for its size it is claimed to be a monarch of power, as the improvements make it a number of times stronger than motors of similar pattern that are sold at the same price. It is well finished, constructed in a durable manner, and is guaranteed by the manufacturer to operate perfectly. It takes less current than any other motor, which means that a battery necessary to operate it may be smaller in size than is possible with a motor requiring as great a current. It is intended to be sold at a very moderate price, and being so light in weight can be sent by mail or express at small expense. As will be noticed in the advertisement, it requires but two special dry batteries to drive it at the rate of over one thousand revolutions per minute, and the motor and cells will be sent complete by the manufacturer for \$1.50, express charges to be paid by the receiver. The inventor desires to introduce this through the Hardware trade, and is willing to make an agent in each town of importance, giving him the exclusive sale for that town. He solicits correspondence with this end in view.

"And have you tried the plan of greeting your husband with kind words when he comes home late, as I suggested?" asked the elderly friend.

"I have," said the youngish lady, "and it works like a charm. He stays home all the time now, trying to figure out what is the matter."—*Indianapolis Press.*

## PARAGRAPHS FROM THE INDUSTRIAL FIELD.

The tables which have been prepared show that the dividends of industrial companies reported exceed those of the railroads, the former amounting to \$22,777,855 and the latter to \$17,322,039. In interest on bonds, however, there is paid out by the railroad companies more than three times as much as by the industrials, the figures being \$49,746,791 and \$3,794,815, respectively.

The railroads of the United States carried last year 65,000,000 tons of lumber, and the development of the lumber interests, notably in the Southern States, supplying yellow pine, and in Michigan and Wisconsin, supplying hard woods, is steadily increasing. Another very large item in the freight business of the railroads of the United States is ore, particularly iron and copper ore, and lead and zinc. The railroads transported last year 60,000,000 tons of ore. Still another item of importance is stone and sand, usually grouped together, of which 35,000,000 tons were transported last year.

The actual amount of United States coin melted by goldsmiths and jewelers is not known, but assuming the total amount of gold coin used in the arts to be \$1,500,000 and silver coin \$100,000, the industrial consumption of the precious metals in this country in 1898 was: Gold, \$13,500,000; silver, \$11,800,000; a total of \$25,500,000, approximately. The use of the precious metals in the arts and trades is increasing largely each year. During the past fiscal year our mints melted into gold bars old jewelry, etc., to the amount of no less than \$1,680,000, a snug sum for old junk in the jewelry line.

Indiana in 1880 had four glass factories with a capitalization of \$1,442,000, and paid in wages annually \$284,207. In 1890 the State had twenty-one factories, capitalized at \$3,556,563, and paid in wages \$1,544,831. Now Indiana has forty-six window-glass plants, ten tableware factories, seven of the thirteen chimney glass factories in the United States, three of the largest plate glass works in existence, two cathedral glass works and thirty-eight green and flint bottle factories, besides three in course of construction, giving her a total of 102 factories, covering every branch of the glass industry. That means that Indiana has increased her glass industry during the past ten years more than five-fold, that to-day it is capitalized close to \$18,000,000, and that her 18,000 glassworkers are receiving in wages annually fully \$7,720,000.

Railroad building in the United States during the first six months of the present year, according to the *Railroad Gazette* was 2,110 3-4 miles. In this table of construction Texas heads the list with 173 miles, Iowa came second with 150 miles, Minnesota following with 130. Pennsylvania added 127 miles; Colorado, 122; Georgia, 117, and Mississippi 109 miles. Among the States showing a less addition than one hundred miles was Oklahoma, with 90.5; West Virginia, 55.75; Florida, 57; Arkansas, 62; Alabama, 46.02; Indian Territory, 45; Tennessee, 68.5; Illinois, 44.9; Michigan, 37.67; Virginia, 36; Montana, 30.5; Oregon, 42.5; Nebraska, 54; South Carolina, 85.86; Wyoming, 55.6; Colorado, 8.75; New Jersey coming near the bottom of the ladder with 3 miles, and Utah touching bottom at .25 of a mile. It is noteworthy in connection with this matter of new construction, that Mexico is showing increased activity in this line—a fact that augurs well for our sister Republic.

Between 1890 and 1900 the exports of copper manufactures increased from \$2,349,392 to \$57,841,707 in value. All but \$14,500,000 of this increase has been made since 1895. In the ten years exports of iron and steel have reached a value of \$121,853,344 for the 1900 fiscal year, or an increase from \$25,542,208 since 1890. The figures for the fiscal year of 1895 were 32,000,979, so that in five years our export business in iron and steel bars has practically been quadrupled.

Few people outside of the immediate vicinity of Pittsburgh have the slightest conception of the enormity of the railroad tonnage drawn to and from that centre, and an investigation of its traffic affords a fine field for the transportation student and will broaden him. The tonnage of the Carnegie Steel Co. alone, raw material and finished product (being 16,000,000 tons last year), is as great as the combined tonnage of the Northern Pacific, Union Pacific and Missouri Pacific railways, embracing, as they do, more than 13,000 miles of track, and running probably 15,000 locomotives and 50,000 freight cars.

Improvements the Carnegie Co. have under way, it is said, will cost, when completed, at least \$10,000,000. The greater part of the improvements will be ready next April. The principal additions are the two Carrie blast furnaces at Rankin, Pa., and a new basic open hearth steel plant at the Duquesne Steel Works. A large number of improvements in the facilities of the different plants are under way, which will further cheapen the cost of production. The company now turns out each month 200,000 tons of Bessemer steel, and when the open hearth furnaces are completed at Duquesne, this will be increased to 240,000 tons a month. Another estimate is that when the plants are in full operation, the output can be forced up to 250,000 tons a month.

Last year the American railroads transported 60,000,000 tons of grain of all kinds, wheat, corn, rye, barley and buckwheat, while the transportation of anthracite or hard coal was 95,000,000 tons, or 50 per cent. more than that of all the grains collectively. Coal, which is the easiest and least expensive item of freight to handle, furnished the railroads of the United States with their chief tonnage. The figures of anthracite coal transportation are greatly exceeded by those of soft or bituminous coal transportation, which amounted last year to 200,000,000 tons; that is to say, about one-fifth of the total freight tonnage of American railroads is in bituminous coal and nearly 30 per cent. of the total freight tonnage of American railroads is in coal, hard and soft. Another very important item is lumber.

The exportations of coal from the United States in the ten months ending with April were nearly 50 per cent. larger than those of the same months of the preceding fiscal year, and 80 per cent. larger than those of the corresponding months of 1898, while our total production for 1898 was not only the largest in our history, but larger than that of any other country in the world. For the first time the United States figures show a larger production than the British figures for the same period. The significance of this fact cannot be overestimated. Steamers have been chartered to carry coal from America to St. Petersburg and Stockholm, as well as to Italian, French and German ports.

### The Warren Hardware Cabinet Shelving— What is It?

This is easily answered. The Warren Shelving comes to the merchant, not alone as shelving, but as a live, intelligent operator, rendering aid scarcely second to man, and in some features attaining quicker and more valuable results than any individual could anticipate.

Though the term shelving is necessarily used to designate it, the features embodied in its construction (through the work it performs and positions it satisfactorily fills by concentrating in itself all the functions of a complete store equipment, of buyer, salesman, stockkeeper and capital), entitle it to a more expressive name, leaving the term shelving but a suggestion.

Through its ingenious and nearly human salesmanship features it brings and makes available to every Hardware merchant almost the actual employment and constant services in his store of an experienced salesman, one whose untiring study has been given to this new method of conducting a Hardware business. It facilitates all transactions to the satisfaction of all patrons and lessens arduous labor, to the great enjoyment and profit of the merchant and his co-workers.

Adaptation is the keynote of the inventor and manufacturer in the multiplicity of spaces and compartments constructed for the numerous lines and varying sizes and numbers, for each of which careful provision is made as if it were the only article dealt in by the merchant.

It is the condensation and concentration of years of study and thought, and its worth cannot be estimated by the material cost of various size drawers grouped together, but has that indefinable something (noticeable in a painting or photograph by a master hand) which is never seen in the work of a person imperfectly acquainted with its subject.

It suggests, teaches and directs merchants and clerks in new and better business ways, as the schools and universities instruct their students.

It brings to the merchant an associate partner who, while active and true to his interests, will cause no displeasing acts or words, and no separation through misunderstandings, more becoming in his competitor's partner or employe; while in salesmanship it aids him and his clerks in nearly every transaction as no individual possibly could.

It is a method that will quickly make easy the sale of any line or article, doubling the value of each employe's services, increasing sales without additional capital.

It keeps the stock with an untarnished sample of each article so displayed that a customer who may even speak another language can easily select whatever he may wish, and the stock is so arranged and priced that the inexperienced clerk can find and sell any article without annoying others, every drawer being provided with a form of register that keeps a record of each article bought during the year, from whom, its cost and selling price, and is so systematically arranged that the entire stock can be looked over and a complete and accurate order placed in less than an hour's time, and enabling the taking of an annual stock at correct prices without the necessity of looking up invoices.

It is the result of the inventor's experience in mingling with hundreds of merchants and clerks when traveling over extensive territory, observing their numerous disadvantages, learning their various needs, and witnessing all forms of attempts to classify and display goods.

### New England Hardware Dealers' Association.

The regular monthly meeting of the New England Hardware Dealers' Association was held at the United States Hotel, Boston, Wednesday, October 10th, at 5 P. M. A very full attendance of members and friends was present, and after dinner had been disposed of the company listened to an interesting address by the Hon. Willard Howland, of Chelsea,

upon the subject of "The Industries of this Country." During the course of his remarks, Mr. Howland said:

"One of the pressing problems of our municipal life is to prevent the overcrowding of commercial and manufacturing centres. This problem can be solved only by the development of methods of rapid transit to enlarge the circle in which a man compelled to earn his livelihood at a given center may choose a home where his family may have the benefit of proper surroundings, which in the overcrowded centres cannot be obtained.

"Our aim should be as a people to create all that we can, and in the exchange of that which we create afford the largest measure of home consumption possible.

"The advance in the wages of labor, which in the last 40 years has nearly doubled, has placed what was before the luxury of the rich within the reach of every American mechanic; his style of living is better than that of the mechanic of any other nation. It should be our aim to improve that condition."

At the conclusion of Mr. Howland's address A. S. Morse proposed a vote of thanks, which was unanimously given.

At the business meeting, which was conducted by president George W. Burditt, a letter from Henry R. Towne, of the Yale & Towne Mfg. Co., was received, having reference to the recent communication of the Association in regard to manufacturers selling to builders and consumers direct. The letter was read by Secretary Farless, and laid upon the table without comment, President Burditt making the statement that the committee having the subject in charge were not as yet ready to report.

The following circular addressed to each of the members present was placed before every plate at the table:

BOSTON, MASS., September 26, 1900.

Gentlemen: The New England Hardware Dealers' Association was founded in 1893, and up to the present time has been useful in many ways in the advancement of the interests of the trade. At our meetings, which are held in Boston nine times a year, Trade Topics are fully discussed and any suggestions of improved methods of business are adopted. It is the desire of this association that local branches may be formed in all the cities and towns in New England with a representative in this association. Will you aid us by forming such a branch in your location? Respectfully yours,

GEORGE W. BURDITT, President.

JAMES A. FARLESS, Secretary.

During the course of the evening a general discussion in regard to retail Hardware advertising methods was entered into and participated in by a number of the members present. It was admitted in the course of the discussion by several of the members that not enough attention was given to this valuable branch of the Hardware business. Notwithstanding a large amount of money was paid out for the purpose, sufficient time was not given to it to make the proper use of the opportunities afforded. The experiences of some of the members regarding the use of local papers were given, and altogether it was a very desirable and entertaining matter to bring up before the meeting.

President Burditt in closing the meeting requested the members present to bring samples of their advertising matter before the next meeting in order that this fertile subject might be continued, while the interest taken at this time was regarded of such an important character.

Some very enjoyable musical selections were given during the evening by Robert L. Van Buskirk, who was accompanied by Miss Madge Parks.

The annual Ladies' Night will take place on the second Wednesday of December, and a Committee of Arrangements was appointed having this important matter in view, consisting of E. J. Neale, Lowell; A. H. Decatur and H. W. Colton, Boston. The committee appointed for the November meeting consists of C. M. Nichols, Dorchester; William E. Whitney, Somerville, and Charles H. Stevens, Arlington.

Cork and poplar are the lightest woods in the world and pomegranate one of the heaviest; it is more than one-third heavier than water.—*Ex.*

## CONSULAR COMMERCIAL COMMENTS.

### TRADE-MARKS IN GERMANY.

It appears necessary to recall the attention of American exporters to a very peculiar provision of the German law for the registration of trade-marks, which is not infrequently used to the great and unjust disadvantage of Americans and other foreigners. Under the German statute any person may register and secure right to any name or other device used as a trade-mark which has not previously been registered here by some other firm or person. In other words, the officials before whom the application is brought make no inquiry to ascertain whether the applicant has ever used the proposed trade-mark or has any right to it, but simply look over the record to ascertain whether it has been registered in Germany. If not, it is admitted to registration without further inquiry or delay.

The readiness with which such a practice can be abused is apparent. When, several years ago, American bicycles began to be imported into Germany, certain persons interested in blocking the trade got the trade-marks of two or three makers registered in their own names, and either obliged the legitimate American owners of the trade-marks to buy them off—in other words, to pay a species of blackmail—or to change the marks on all bicycles exported to Germany.

In a recent case, the trade-mark on a special brand of American preserved fruit was registered here by an outsider, so that the real owner had to buy from the usurper the right to use his own trade-mark in this country.

This abuse has become so notorious that a leading patent attorney of Berlin, writing in a recent number of the *Technische Rundschau*, says of the law that its effect is to legalize and facilitate the theft of a trade-mark.

The obvious suggestion to all American exporters is that before exporting or seeking to export to Germany any kind of merchandise covered by a well-known name, whether registered in the United States as a trade-mark or not, they should have such name or trade-mark duly registered in this country, where all such rights are carefully protected and prosecutions for infringements easy and effective.

FRANK H. MASON, *Consul-General*.

BERLIN, September 24, 1900.

### TRADE-MARKS IN DENMARK.

In continuation of the report dated July 4, 1900, on abuses of American trade-marks in Denmark, I submit the following as to the means necessary to secure a trade-mark in this country:

In order that an American citizen or firm may get a trade-mark registered in Denmark, it is necessary, as a preliminary step, that the same trade-mark be registered in the United States.

For effecting the registration of a trade-mark in Denmark, the following documents, etc., are required:

(1) A power of attorney signed by the petitioner (who must be the same party to whom the corresponding trade-mark in the United States belongs). This signature must be authenticated by a Danish Consul in the United States.

(2) An official extract from the United States trade-mark register showing that the mark in question has been duly registered in the United States. This extract has also to be authenticated by a Danish Consul.

(3) Two electro blocks of the mark, one of which must be mounted on a metal base. The mark must not exceed 15 centimeters (5.9 inches) in width or 10 centimeters (3.9 inches) in height, and the electros must be deeply cut.

(4) Six prints of the mark on strong white paper.

I may add that the requirements for the registration of a

trade-mark in other Scandinavian countries are the same as for Denmark.

Prompt action should be taken by American manufacturers to prevent the appropriation of their trade-marks by unscrupulous foreign firms. JNO. C. FREEMAN, *Consul*.

COPENHAGEN, September 15, 1900.

### STRIKE AND LOCKOUT IN SOLINGEN.

The lockout of the Manufacturers' Association of Solingen against the pocketknife fitters of this place went into effect on the 4th of September last. This situation, if continued for any length of time, may create entirely new conditions in the cutlery industry here and may result in the establishment of a comprehensive market value, a thing which has never existed in Solingen.

The manufacture of pocket knives is almost exclusively a home industry, and is divided into many branches, chief of which are grinding, fitting and finishing. Each of these branches has numerous masters, who, when necessary, employ independent journeymen and apprentices. During the dull seasons wages go down, and the masters often underbid each other in order to secure work at even a minimum profit. Skilled workmen receive the preference, and, as a result, despite the low wages, a better quality of workmanship is often furnished. In the busy seasons manufacturers fill their orders with difficulty, and the prices of labor go up rapidly in proportion to the demand. In some instances the manufacturer has had to sacrifice nearly all his profit to get his work done.

The uncertainty of these conditions was keenly felt by all concerned and resulted in the establishment of protective unions by both the manufacturers and the workmen. The original intention of this step was to bring about harmony of interests, and a commission of an equal number from both sides was appointed to secure this result. The scheme, however, did not work as well as was expected, both sides showing little desire to live up to agreements; and, as the workmen were by far the better organized, the rulings of the commission were disregarded and the promise to better conditions was never fulfilled.

This was the situation up to a few months ago, when, against the advice of the commission, a strike was arbitrarily declared against a Solingen firm. Through the indifference of the Manufacturers' Association the strike was won, and the firm was compelled to yield to all the demands of the workmen, and, besides, to pay a fine of \$2,500.

### MAKING BRICKS FROM GLASS-WORKS REFUSE IN ENGLAND.

Dr. Ormandy, of St. Helen's, formerly master of science at the Gamble Technical Institute, that city, has recently discovered a process by which good furnace bricks can be made from glass-works refuse. St. Helen's, which is a few miles from Liverpool and within this consular district, is not only the centre of the English chemical trade, but contains a number of large glass-works. The millions of tons of refuse which have accumulated around the glass-works heretofore have been treated as of no commercial value. The refuse consists mainly of spent sand, minute particles of glass, and about 3 per cent. of iron from the various processes, and it has hitherto been considered that the presence of the iron prevented the use of the material for the manufacture of bricks.

Patents have been taken out to protect the process, and a large firm has engaged Dr. Ormandy's services. After making various experiments, the firm is now putting up an extensive plant for the manufacture of the bricks. It is claimed that the bricks will stand a great amount of heat.

They are about the color of silica bricks and can be glazed. Considerable secrecy is observed as to the process.

JAMES BOYLE, *Consul.*

LIVERPOOL, September 21, 1900.

### Harrison Bros. & Co.'s Varnishes.

Since Harrison Bros. & Co., Inc., Philadelphia, New York and Chicago, began making varnishes on their present extensive scale they take pleasure in announcing that the demand for them has so steadily increased that at the present time their facilities for producing them are taxed to the utmost. The trade handling this line recognize the fact that the quality of these goods is of the same high standard as their white lead, paints and colors, for the excellence of which they have been known for a period of time that the oldest inhabitant would find it difficult to remember. They announce that no effort in the future will be spared to maintain this important feature of the production. The best material used, and the highest degree of varnish-making skill, by the most approved processes, combined with the most modern apparatus, produce a resulting product which, they claim, is of the highest grade possible. Strict attention has been given to the elimination of the various mischievous methods to which too many varnishes are subjected. The advantages of using the Harrison varnishes are clearly set forth in an interesting leaflet just published by them, entitled "Why You Should Use Harrison's Varnishes." This will be sent on request of the trade, together with a full descriptive price list.

### Letter Writing as an Art.

"Letter writing as applied to mercantile as well as educational and social pursuits may be an art. The limit of possibility in this direction has never been reached, nor will it be so long as we approach the individual through this medium in the endeavor to change his opinions or thoroughly imbue his mind with favorable impressions already made. Observation has led to the belief that too little attention is given to this, the most important branch (after the capital has been supplied) in most every business organization.

"A prospective customer should know of us first through this medium, and when he becomes a customer should never be allowed to forget that he has personal consideration in this manner as often as mutual interests can be served. Many houses never write their customers (with a few exceptions) unless it is in reply to a mail order to say they are unable to fill a part or the whole. The main order is taken by a road salesman, which, when sent in, is acknowledged by a postal card. The next reminder that they are customers is the receipt of an invoice for the goods, and if they pay their bill before the credit man gets an opportunity to say 'Please remit,' the whole transaction is completed without a single letter, much less having engendered a friendly feeling.

"A customer should receive a letter as often as circumstances and good taste will permit. The mental attitude of the writer should be as that of a promoter of a mutual interest, an enhancer of a value yet undetermined. He should be a man of discretion; should familiarize himself with the traits and character of the customer, and feel that he is before him, framing a reply to be given as soon as the letter is finished. At times a slight advantage may be taken of a country merchant because of distance, but if used, is neither just nor courageous, and sooner or later is bound to militate against the doer.

"A letter too brief is little better than no letter at all, while a long, rambling discourse is almost sure to create anything but the desired impression.

"The customer's mental calibre, so far as it is ascertainable, should be well taken into consideration, and the letter should avoid the appearance of form or the attempt to impress the recipient with loftiness in a literary production.

We should put ourselves in the customer's place and keep in our minds his relation to us, as well as our relation to him. More harm may be done by an ill-constructed letter than can be remedied by a tactful salesman in a year. The good physical condition of the correspondent is of most importance, without which a favorable mental condition is impossible. A well-known author was once asked what preparation he made in beginning to write a book. He replied: 'A good horse and saddle, to regulate my liver.'

"A high state of mentality at all times is out of the question, because the best balanced minds fluctuate and powers of expression vary from day to day, even from hour to hour; but strict observance of the laws of nature is conducive to a state of mind from which emanate thoughts of the clearer, higher order, and when put to work in any direction is bound to reflect credit and inspire the hearer or recipient of an epistle with confidence in and respect for the opinions. Flattery is permissible only in the hands of the most astute, and should be used in very rare cases, and then only that flattery which appeals to the intellect or higher self, instead of that which appeals to vanity and other weaknesses. The latter will not creep into our letters if we elevate our thoughts into the upper channels of the brain, ever endeavoring to establish for the house in the minds of the customers a reputation for fair dealing."—From an address by N. M. Tribou, of Chicago, before the Chicago Credit Men's Association.

### American Tool Chest Co.

At this season of the year the general demand for tool chests comes in every direction from the trade, and the American Tool Chest Co., 200 West Houston Street, New York, are fully prepared to meet this demand. They have just placed

"LIBERTY" BOY'S TOOL CHEST.

on the market for the Fall and holiday trade two new complete lines of boys' tool chests, sufficiently improved to supersede others that have long been manufactured by them, this being an important part of their business for holiday requirements. One line is marketed under the name of the "Standard," and is sufficiently complete to require seventeen sizes of chest, the material being chestnut wood with stained moldings, presenting a very handsome appearance considering the moderate cost. The company have increased the number of tools in the various boxes, and have made every effort to supply a better class of goods than has previously been the case in every instance. The prices governing this line are extremely moderate, running from \$8 a gross to \$40 a dozen boxes. The other line referred to, which is marketed under the name of the "Liberty," is made in similar styles, sizes and arrangements, but is intended to supply tools of a much higher grade of quality, and appeals to a more mechanical talent in regard to utility. This company manufacture tool chests, both empty and complete, provided, when necessary, with tools suitable for gentlemen, amateurs or professional mechanics, and reaching in cost as high as \$200 each. This is mentioned to show the extremes to which this line of goods can be indicated from the highest grade to the more economical styles, appealing as it does to all classes.

### System and Hustle.

"System and hustle" seem to be especially serviceable in the Credit Department, but they should have much significance to the traveling salesman and merchant as well. With system, one can hardly fail to cover ground thoroughly, and with plenty of hustle one keeps abreast of the times. Speaking of keeping abreast, it may be pardonable to narrate an incident of recent occurrence. A colored mammy on a train is wrestling with a pickaninny, who is slow to take the ample bosom dinner which she offers him. "Now, chile," she says, "you bettah hustle and take hold ob dat, or I'll gib it to de conductuh."

Just so the traveling man who does not hustle to "keep abreast," as it were, will find there are "conductuhs" around to take what he fails to get. As to the merchant, he will almost certainly be a good stockkeeper and collector if he has system. With hustle added, he will buy and sell more goods. The traveling man with these watchwords can equip himself for more business, and, being enthusiastic, can soon imbue most of his customers with his spirit. It will be easier to get orders from such customers, because they will be ready for him. While there may be merchants apparently incapable of "getting a move on," yet patience and a kindly interest on the part of the traveling man will often work wonders. The credit man who calls the traveler to his desk at an opportune moment and talks to him about system and hustle can make his own labors lighter and promote the mutual interests of the traveler, the house and himself. Let the words spoken to the traveler make an impression. When he notes your genuine interest in his success, as betokened by your seriousness, go on to point out how he may make some of his slow-going customers feel the same way toward him, by persistent, cheerful and kindly talk along the lines of the merchant's own welfare. No one can be harmed by this. Scarcely any one can fail to be benefited. It would be well before talking with your traveler to prepare a sample conversation between him and a typical easy-going customer. All travelers do not readily adapt themselves to unfamiliar subjects, and you will not be firing in the air if you give him tangible evidence that you are not merely "jolly-ing." With this sample talk in his pocket he feels a degree of assurance that might otherwise be lacking. He must not be left in ignorance, like the boy on the Pike's Peak cog road, who responded in disgust to the inquisitive woman who wanted to know "why the rock on the left is called the lion's mouth." "Aw, I dunno why nuthin. I'm paid to holler, and I holler."

JOHN T. PLUMMER.

In Utica, N. Y., a block of new apartment houses has just been furnished with complete installation of electric cooking utensils in each flat. The electrical kitchen furniture consists of three round platters or "stoves," an oven and a broiler. It is declared, apparently with reason, that meats broiled on the electric gridiron are much more palatable than those charred and scorched in the ordinary way over hot coals. The most remarkable feature of these electrical kitchens is that the stoves, etc., are simply placed on an ordinary kitchen table, and when the cooking is completed can be stowed away in a convenient closet, leaving the kitchen free of even a trace of cookery. Space is thus saved, and the kitchen can be as small as the conscience of the architect will permit because of this saving, and also because electrical utensils give off no heat. All of the heat is used in the cooking and not in warming and vitiating the air of the room. The flats in Utica are also provided with electric curling-tongs heaters, much approved by the feminine tenants.

The Paying Teller—I cannot cash this check, madam.  
She—Why not?

"There isn't enough money here to meet it."

"Then can't you meet it half way?"—Life.

### Bardsley's Oil Door Check and Spring.

Joseph Bardsley, 147-149 Baxter Street, New York, is placing upon the market this season through the Hardware trade the "Bardsley" Oil Door Check and Spring, which has for the present season been greatly improved in many respects, and stands to-day as nearly perfect as it is possible for an appliance of this kind to be. Among the points to which attention is called by the manufacturer, and which is worthy of appreciation, is the fact that they have a releasing device which is especially useful where an electric or spring door opener is used, where the door has to close against a draught, and when a door is hard to latch. By means of this device the checking power is suddenly removed when the door is within an inch or two of the closing point, allowing the full strength of the spring to be exerted and causing very little slam. This releasing feature is brought into play by a simple adjustment of the arms, and need not be employed unless desired. When the arms are adjusted in the normal position the door closes quickly to within a few inches of the jamb and then slows up and closes gently and silently.

In the construction of these door checks no packing friction is ever used. The full strength of the spring is consequently

BARDSELY'S OIL DOOR CHECK AND SPRING.

enabled to be used in closing the door, and not in overcoming the resistance which results from an unnecessary amount of tight packing, which is frequently used in similar devices. The springs now used among its mechanical features are made of polished clock steel of superior quality, insuring strong and noiseless action, and consequent durability. The spring is so constructed that it cannot be unwound, and thus injured or destroyed, as may happen when an attempt is made to put a right-hand spring on a left-hand door, and vice versa.

The Door Check is fitted to hold a surplus of oil sufficient to last many years, and more may be added when needed through a screw hole in the cap without removing the Check from the door.

### The Pay Goes On.

The Supreme Court of Louisiana held, in the recent case of *Madden vs. Jacobs et al.*, that where the plaintiff had been engaged for a year as clerk, the destruction by fire of the business house and stock of goods of the defendants, and the subsequent dissolution of the firm and its retirement from business, did not, in the absence of a reservation of the right of discharge for these reasons, absolve the defendants from the obligation contracted with him to retain his services at the salary stipulated through the remainder of the year.—Exchange.

The Island of Guam is 3,500 miles from Honolulu and 1,600 miles from Manila.

### Utilization of By-Products.

In no direction has the inventive faculty shown more progress than in the utilization of by-products. Much that was once treated as scrap or refuse, thrown aside as useless and often treated as a serious encumbrance, has now become valuable as raw material for the production of various articles of commerce for which there is large and growing demand, so that often the supply of waste material proves inadequate and attention is turned to the manufacture of scrap solely. Every one is familiar with the history of excelsior, or "wooden hair;" sawmills are ransacked for the sawdust; old bottles and broken glass reappear in sandpaper; refuse cork makes capital handles, and any old garment or shoe containing rubber has a value which makes it worth saving. Scarce a day passes without some new discovery for utilization of waste products of petroleum or coal tar, and the production of sugar from the once despised and rejected refuse of corn now forms a large and important industry in many parts of the country.

The opening of the twentieth century, with its advanced methods and keen competition, has made necessary the care-

THE LEE BREAD CRUMBER.

ful study of how to reduce waste to a minimum, and, if possible, utilize such as is unavoidable. In no profession is there better opportunity for the exercise of ingenuity than in the feeding of people, especially in large hotels, restaurants, ocean steamers, etc., catering to a large number daily. In such the most serious waste is unquestionably in the use of bread, and few if any really feasible means for its disposal suggest themselves to the manager of the kitchen, who would gladly welcome some method of saving in this item. Not only is loss caused by bread becoming stale, but more seriously perhaps by the large number of small broken pieces removed from the table, which, while absolutely clean, yet bear marks of previous handling sufficient to condemn them from further serving.

Stale bread cannot be avoided, and waste at the table is difficult, if not impossible, to prevent, but a device may now be had for utilizing this, one of the by-products of the kitchen, and returning it again in the form of a valuable accessory, for which there is a lively demand, and which offers unlimited scope for the exercise of the culinary art.

In all large kitchens there are used large quantities of cracker meal, which constitutes a considerable item of expense. Sometimes the use of bread crumbs necessitates the labor of carefully drying the bread, and then reducing it to the proper state of granulation under the rolling pin, or between the hands, neither of which methods gives satisfactory

results. Cracker meal being a rapid absorbent, takes up a large quantity of grease, producing indigestion and stomach disorders of various nature, so much so that the use of stale bread crumbs is more preferable, if crumbs of the proper lightness can be easily and cheaply produced. Better than all, however, are fresh bread crumbs produced from the small and broken pieces usually thrown away. Soft bread crumbs take a rich, appetizing brown in frying, do not absorb grease, are light, flaky and may be eaten without fear by the most confirmed dyspeptics or by invalids. In the innumerable ways in which crumbs or meal are used in cookery, fresh bread crumbs are superior, and in addition may be used in many ways not otherwise possible, besides offering new methods and articles of dainty food heretofore unknown. In frying croquettes, fish, oysters, clams, for making griddle cakes, corn bread, puddings, dressing, thickenings, etc., the use of fresh bread crumbs offers better and more palatable food, with the paramount advantage of a large saving of expense.

This saving is produced by the Lee Bread Crumber, an illustration of which appears herewith. It is manufactured in three sizes to suit all requirements, and is fully guaranteed by the makers to produce the results claimed. It is not necessary to dry the bread, as the Crumber will reduce fresh bread to light, airy crumbs at a rapid rate. Crumbs do not accumulate in nor clog the machine, and it is not necessary to clean it out after each using. Many of the largest hotels and caterers now using the Lee Crumber are unanimous in its praise, testifying that it has paid for itself many times over.

The Lee Crumber is manufactured by the Goodell Co., Antrim, N. H., which upon request will send catalogue fully describing it, together with testimonials and list of places where machines may be examined at work daily. The Lee Crumber takes front rank among the labor-saving machines of the day, offering to the proprietor the means of effecting a large saving, while enabling him to offer to his guests that for which a noted king once pledged half his kingdom—"a new pleasure."

### The Keuffel & Esser Co.'s New Catalogue.

The Keuffel & Esser Co., 127 Fulton and 42 Ann Streets, New York; 111 Madison Street, Chicago, Ill., and 708 Locust Street, St. Louis, Mo., have recently issued one of the most complete catalogues that they have ever prepared for general distribution to the Hardware trade, covering their line of drawing materials and mathematical and surveying instruments of every description. The catalogue is a volume of nearly 500 pages, exceeding their previous catalogue, which was the largest they had ever issued, by upward of 50 pages. The changes noticeable when compared with the previous catalogue will be found to consist almost entirely of additions to the original lines described. Pains have been taken to make the descriptive matter much more elaborate and complete, and many cuts that have been used in previous catalogues have been replaced by better ones, or additions have been made to those formerly used, so that the illustrations used throughout present a much more perfect appearance than we have ever previously noticed. The index has been carefully revised and made very complete, so that the contents may be readily found by a single reference, although the greater part of the contents of this catalogue is carried by the Hardware trade generally, in accordance with the local demand. Among the most important lines of their manufactures in which the entire trade is thoroughly interested are their steel and metallic measuring tapes, which have been favorably known for years as fully warranted American-made goods. Included in this line is the new Ivorine (white) folding pocket rule with springs. These are described at length on page 194 of the catalogue. Altogether it is a catalogue well worth the attention of the Hardwareman who desires to be thoroughly up to date in educational appliances of this character, and also in the high-grade tools for drafting purposes of which every mechanical plant at the present time finds necessary to establish a complete outfit.

## THE PAN AMERICAN EXPOSITION, 1901.

### STREETS OF MEXICO.

A WONDERFUL REPRODUCTION OF THE VARIOUS PHASES OF LIFE IN THE MEXICAN REPUBLIC AT THE PAN-AMERICAN EXPOSITION.

It is said of the Midway at the Pan-American Exposition in Buffalo next year that it will be the most extensive, as well as the most expensive, aggregation of amusement features ever brought together at any exposition. It will have more than a mile of frontage. Among the large concessions is that of the "Streets of Mexico," which occupies 95,000

known as the "Plaza of Flowers." In the centre of this is the band stand, where a company of expert musicians will play Mexican airs. The architecture all about the Plaza is of strictly Mexican style and very elaborate. On the right is a Mexican dance hall, and south of the dance hall a Mexican market and an old rural village, with its adobe huts and a representation of the cliff dwellers of Mexico. At the extreme southern end of the Plaza is a Mexican cathedral, most gorgeous in detail. At the extreme southeast corner is the

STREETS OF MEXICO, PAN-AMERICAN EXPOSITION

square feet upon the south side of the Midway near the main eastern entrance. This concession will present a graphic picture of Mexican life, both the old and the new. The vista, as one stands at the entrance to the Streets of Mexico, is extremely picturesque and invites a closer examination. Two tall towers, with a high arch between them, form the entrance. Entering the street, stores may be seen on either side, where Mexican wares of all kinds will be on sale. The large number of Mexicans who will be in charge of the concession will be attired in their native dress, and one may readily imagine himself suddenly transported to the heart of the thrifty republic. At the extreme right of the stores are the army headquarters for the convenience of the company of 100 mounted men, or, as they are known in Mexico, "rurales," who will attend the Exposition by order of President Diaz of Mexico. At the left is the Mexican restaurant, and east of the restaurant the theatre. Proceeding southward we come to a large open space, the southern part of which is

"Plaza de Toros," where Mexican equestrian and other sports characteristic of Mexico will take place. It should be remembered that the dances in the dance halls will be of the Mexican character, that the restaurants will serve Mexican food, and in the markets and stores will be sold Mexican products. The theatre will be conducted after the manner of Mexican play houses, and every feature will produce Mexican life. In the village will be shown Aztec Indian relics, and in the shops will be blanket makers, cane carvers, onyx and filigree jewelry workers, leather workers, opal polishers, pottery makers and others who are skilled in Mexican handicraft. There will also be a Mexican band playing peculiar native instruments. Surrounding the Plaza will be portales, or open arcades, where the visitors may sit at tables, partake of a luncheon and view the interesting scenes upon the Plaza. This concession has the approval of the Mexican Government, which has lent its assistance heartily to make it a true representation of the various phases of life in that country.

### FILIPINO RELICS.

A MOST INTERESTING COLLECTION ILLUSTRATIVE OF WAR AND PEACE IN AMERICAN POSSESSIONS TO BE SHOWN AT THE PAN-AMERICAN EXPOSITION.

A remarkable collection of Filipino relics will form one of the most unique and attractive features of the Pan-American Exposition at Buffalo. No great international fair has been held in the United States or on the American continent since the annexation of the Philippines to the United States, and no opportunity has heretofore been offered for a complete and comprehensive exhibit from these islands. The United States Government has undertaken to collect exhibits from the Philippine Islands, Hawaii, Guam, Cuba, Porto Rico, Tutuila and Manua. Naturally by far the most extensive of these exhibits will be that from the Philippines, which, on account of the great variety of native peoples inhabiting them and the richness and diversity of the fauna and flora, offer the best opportunities for an interesting display. The war in the Philippines and the fact that even yet American soldiers are being killed by the natives who do not accept the authority of the United States, still further increase the interest that will be taken in this exhibit. Expansionists and Anti-Imperialists alike will view the collection with keen curiosity. Colonel F. F. Hilder, of the Bureau of American Ethnology, Smithsonian Institution, has been engaged in the collection of many relics for this Philippine exhibit. He recently returned from a sojourn of five months in these new possessions of the United States. Many of the articles which he gathered are now in this country, and are being prepared for the Pan-American. These relics are rich in instructive qualities and show in a graphic manner the Filipino methods of living. For example, there are in the collection a number of models of Filipino houses, of vehicles and of the apparatus employed in the manufacture of the various products of the archipelago. One of the implements to be shown is a large wooden mortar, such as the natives have used for centuries for beating and husking rice, and which is known as a "luzon." From this implement the principal island in the Philippine group derives its name. There will also be in the collection a complete set of the tools used in each trade practiced in the Philippine Islands.

Especially interesting to the military men, members of the National Guard, etc., who attend the Exposition will be the collection of implements of war. In the fighting which has been in progress for nearly two years the Filipino warriors have used their own weapons as well as the modern arms secured from the armories and arsenals of other countries. Knives and swords of many curious fashions with expensive ornamentations will figure among these relics. There will also be war trophies which will possess intrinsic interest because of their association, as well as on account of their curious workmanship. Among these trophies will be two brass cannon, mounted on swivels, which were captured by the Filipinos from the Moros and afterward captured by the Americans. Another relic of the Spanish regime will be a garrote in use for many years for the execution of criminals by the Spanish authorities.

### Some Microscopic Hardware.

At an exhibition of arts and crafts held at Willenhall, the most remarkable example of handicraft was a complete set of the implements—comprising vice, anvil, files of various kinds, and other et cetera—used by the locksmiths of Willenhall in their daily occupation. The principal feature of the exhibit was that the whole of these articles stood on the surface of a three-penny-piece. They were surmounted by a padlock with its key, equally microscopic in size, but perfect in construction. The exhibit was the work of a local artisan. It would seem that the genius of Mark Scaliot, the sixteenth century Willenhall locksmith who made for Queen Elizabeth a padlock, with chain and key, the whole not weighing a grain of gold, is still hereditary in the Black Country "town of locks and keys."—*Exchange*.

### Parlor Match Manufacture.

"The cheapest manufactured article now in the market is the ordinary parlor match," said a wholesale grocer of this city. "The makers average about 2 1-2 cents apiece for packages containing a dozen boxes of from sixty to seventy-five matches each. That is less than one-fifth of a cent a box. Now, take the trouble some time to ascertain exactly what constitutes one of these packages, and I venture to say you will be astonished. To begin with, there are twelve pasteboard boxes, each consisting of two pieces—the slide and the cover. The slide is pasted in four places to keep its shape, and the cover in one, the latter being made of double surfaced paper, white on the back and printed upon the top, bottom and one side. The remaining side bears a strip of sanded glue for striking. Altogether, fourteen different operations are required to produce each box. At the lowest estimate the package contains 720 well made matches, and it has been calculated that each match passes through about thirty separate processes, beginning with the cutting of the rough timber and ending with the polishing of the heads. Then there is the outside wrapper, which is printed on one side and pasted at top and bottom; and the final task of packing should certainly not be omitted from the estimate. Of course, it would be impossible to do all this, or a fraction of, it for 2 1-2 cents, were it not for modern labor-saving apparatus. The parlor match comes nearer being an absolutely automatic product than anything I know of. The plant of an up-to-date factory consists of a succession of ponderous machines, all connected, and big cylinders of white pine which are fed into a hopper at one end come out perfect matches at the other, already boxed, packed and counted. In the course of the operation the boxes themselves are fashioned out of huge rolls of pasteboard and deposited on endless belts, which carry them to exactly the right spot for filling and slip on the covers when they receive their requisite quota. The employes are merely attendants; all the actual work of manufacturing is done by the machines. They have driven the foreign product almost entirely out of the market. When I first went into business matches were wholly handmade, and there were little factories all over the South. The price was 25 cents a box."—*New Orleans Times-Democrat*.

### Oil in Files.

All files, when they leave the manufactory, are covered with oil, to prevent them from rusting. While this is not objectionable for many uses to which the file is put, there are cases where the oil should be thoroughly removed, as when the file is to be used for finishing large cast iron surfaces of a glassy nature. The principal difficulty in such work is to make the file "bite" or keep sufficiently under the surface to prevent glazing. If the oil is not removed the action not only hardens, or burnishes, the surface of the work, but dulls the extreme points of the file teeth, thus working against the desired end in both directions. Oil may, however, be used to good advantage on new files which are put immediately to work upon narrow fibrous metals of harder nature. In such cases it is not uncommon among good workmen to fill the teeth with mixed oil and chalk.—*Ironmongers Chronicle*.

### How They Differ.

A woman writer says: "Man is a creature of cast-iron habits; woman adapts herself to circumstances. This is the foundation of the moral difference between them. A man does not attempt to drive a nail unless he has a hammer; a woman does not hesitate to utilize anything, from the heel of a boot to the back of a brush. A man considers a corkscrew absolutely necessary to open a bottle; a woman attempts to extract the cork with the scissors. If she does not readily succeed, she pushes the cork into the bottle."

## RECENT TRADE PUBLICATIONS.

A. TREADWAY & SONS HARDWARE CO., Dubuque, Iowa. Fall and Winter catalogue No. 28 for 1900. This is a large, full catalogue-size pamphlet of 68 pages, embracing in its contents the line of goods, the sale for which is usually large at this season of the year, such as axes, elbows, eaves, troughs, cut-offs and hangers, stove pipe and dampers, registers and ventilators, coal hods, stoveboards, shovels and pokers, mica, snow shovels, wood saws, etc., etc. The catalogue is very comprehensively gotten up, and so arranged that a close application to its contents will enable a dealer to purchase a stock appropriate to the season. Included in its contents are several pages devoted to recent styles of padlocks, target rifles, ice skates and children's sleds.

COVERT MFG. CO., West Troy, N. Y. Pamphlet catalogue and price list of 64 pages, embracing their entire line of specialties, all of which are popular with the trade, and consisting of Breast chains, cattle ties, breeching, halter, heel and post chains, combination adjustable rope and web halters, halter leads, horse ties, wagon jacks, hitching weights and hitching posts, etc. Included in the assortment is their line of Snaps so well known and appreciated by the trade, including "Yankee" chain and swivel and double snaps, Covert's chain, swivel double and spring snaps, and also the "Yankee" roller, martingale, breeching and trace snaps. Among the specialties noticed, the "Yankee" gate and scuttle hook and the Covert safety gate and scuttle hook are important specialties. In fact, the entire catalogue, if carefully ordered from, will make a very desirable addition to any Hardware stock in the country.

CANTON STEEL ROOFING CO., Canton, Ohio. Pamphlet catalogue of 26 pages of their new line of Sheet steel warm air registers and ventilators, giving all the various sizes of each, and including price list for everything connected with this important line of goods, including as it does registers with vertical wheel, register faces, floor borders, ventilators, registers without valves, and wall frames and borders. These goods are manufactured by this concern in black or white japan, electroplated nickel, brass, bronze and copper, and also in the finer grades of gold and silver. A line of white porcelain register faces and borders is also given. Included in the assortment is a line of convex registers of square shape for shallow flues and thin partitions. The catalogue is well illustrated, all the necessary dimensions being given of registers and borders and instructions how to set the same properly.

THE DEMING CO., Salem, Ohio. Illustrated catalogue No. 20 of hand and power pumps for all purposes, including cistern, well and windmill pumps, iron and brass cylinders, well supplies, hydraulic rams, spray pumps and nozzles, triplex power pumps for various duties, artesian well pumping engines, etc. This is a very complete catalogue, bound in cloth, of 270 pages, printed on excellent paper and illustrated clearly throughout. The cuts used are of a character to leave room for adequate description of the articles presented. This is done on each page, giving list prices immediately under the article shown, which is a great convenience. Among its features an index to the numerical figures by which the goods are known is given among the final pages. Articles of their own make are represented by the cipher word for convenience in telegraphing. They also present a telegraph cipher code, a general classification of pumps, a complete alphabetical index of everything shown, and many rules and tables useful to pump men and engineers. For the convenience of dealers and

users they have added in this volume a catalogue of triplex and deep well power pumps; also one relating to spray pumps and nozzles. Two pages are given to a general classification index which indicates how many different styles of pumps and similar goods are made by this concern, as each of these is given special prominence and the pages where found indicated clearly. This is a very important catalogue of the line of goods presented, and should be in the hands of the trade generally. We should advise those not having already received the same to apply for a copy, as it will be a valuable addition to a Hardware library.

F. E. MYERS & BRO., Ashland, Ohio, have recently published one of the most ambitious catalogues we have seen emanating from this well-known and extensive house. It is their catalogue No. 35, and is devoted to their line of double-acting force and lift hand, windmill and power pumps, hydraulic, barrel and bucket spray pumps, atomizers, cylinders, pipe, hose and fixtures. Included in its contents is a large variety of haying tools, embracing hay carriers, hay forks, steel track, pulleys, slings, etc. The catalogue also devotes a number of its pages to the store ladders, bicycle stands, door hangers and gate appliances that have long been manufactured by this company, and popular with the trade. The catalogue is a bulky one of 326 pages with embossed heavy muslin cover, presenting a very agreeable and handsome appearance, with bronze lettering and ornamentation on back and front. A great deal of attention has been devoted to a very important part of a catalogue, that of giving a catalogue number to every particular item, so that a price list reference is easily ascertained, being indexed numerically in accordance with the number of illustrations. The number index is a very handy page, because by consulting it the page where the article numbered can be found is at once indicated. Altogether it is a very complete catalogue, and reflects great credit upon the compiler, who had an amount of detail to give attention to worthy a catalogue twice the number of pages.

SMITH BROS. HARDWARE CO., Columbus, Ohio, wholesale dealers, have recently issued a separate and distinct catalogue applying to their stock under the head of a Sporting Goods catalogue. The contents indicate how largely this branch of their business has been extended and amplified. The pamphlet, which is of square quarto shape of 56 pages, is crammed full of desirable goods in this particular line, the sales for which are usually large at this season of the year, including the Remington breech-loading guns, the L. O. Smith hammerless guns, and a large variety of other guns, including Interchangeable, imitation Diana, and Winchester "repeating" and "take-down" shot guns. Their assortment is very complete in these goods, all the leading styles that have an extended sale being represented in the catalogue, including those made by Iver Johnson, Stevens, and the Marlin Co. A number of pages are devoted to revolvers, ammunition of every description, including empty and loaded shells, the Hazard Powder Co.'s products, Keystone breech-loading implements, and a full line of accoutrements, including holsters, ammunition cases, shell belts, gun covers, canvas coats and leggins. Fish hooks and luminous baits are well represented on a number of pages, evidently forming a large part of their sales of this description. Included in the contents are fish lines in large variety, put up in all the various styles, together will all the necessary paraphernalia in connection therewith, rods, sinkers, swivels, guides and reels. The final pages of the catalogue show a line of U. S. club skates, covering the usual and salable styles.

## NEW GOODS AND SPECIALTIES.

### Electrician's Insulated Plyer.

The Smith & Hemenway Co., 296 Broadway, New York, from among their numerous specialties, are at the present time placing upon the market the Insulated Plyer No. 118, for linemen, electricians and parties having occasion to use a plyer of this description. Among the advantages claimed for the Insulated Plyer may be mentioned: The handles are covered with rubber, thereby insulating them thoroughly and

ELECTRICIANS INSULATED PLYER.

protecting any one using the same from any electrical shock. The round-edge feature, as shown in the illustration, which we present herewith, the manufacturers state, has met with universal praise from electricians who have already become familiar with the advantages of this new and desirable tool. They are convenient and portable in size, and can be carried in the pocket without injury to the clothes. This feature commends them to a larger circle of users than would otherwise be the case.

### Brauer's Patent Ankle Support.

Brauer Bros., 2004 Locust Street, St. Louis, Mo., are manufacturers of a specialty that should find a ready sale in connection with the distribution of skates. It is a patent ankle support, the operation of which is readily shown in the illustration given in connection with this article. It is intended to be worn by skaters having weak ankles for the purpose of supporting the ankle and at the same time permitting sufficient flexibility to the wearer's foot. The brace, as an entirety, is designed to be made of five-ounce russet oak tan leather, and is light in weight, quite easily applied, and of moderate cost. In the cut as shown herewith, indicates the body portion of the brace, which is made of leather and is provided at each end with eyelets to co-operate with

BRAUER'S PATENT ANKLE SUPPORT.

the brace, which may be attached to the wearer's foot. The sides of the brace are perforated so as to accommodate the protruding ankle-bones of the foot, in order to prevent that uncomfortable binding which an appliance of this kind might cause. These perforations are desirable in that the brace fits the foot more neatly and snugly, and is thus prevented from undue movement, which might chafe the wearer's foot. They are made in sizes suitable for ladies and gentlemen and youths.

### Claus Adjustable Handle Bar.

The Milwaukee Automatic Machine Co., Milwaukee, Wis., are manufacturers of the Claus Double Clinch Adjustable Handle Bar shown in the accompanying illustration. This particular handle bar is claimed to possess a number of points of merit to which the manufacturers desire to call attention, and on which its popularity has been gained. It is an adjustable handle bar that can be adjusted without a

CLAUS ADJUSTABLE HANDLE BAR.

wrench, and forms, notwithstanding, a neat, compact, unbreakable, durable adjustment. It can be adjusted while on the road, has no nut in the centre, which is usually considered an obstruction, and in its adjustment the shape or width of the handle bar is not affected. A very quick conversion changes it from a drop to an up-turn. Owing to its tapered or wedge-like construction, it is claimed to be extremely sensitive and readily operated, even by a child, forming a firm and reliable grip. By loosening lock-nut, the bar may be dropped so that the bicycle will take up less space, and can be placed in the limited space back of a door. The metal parts are heavily nicked on copper, and it is placed on the market at a price that is intended to make it profitable for the dealer to handle.

### Winslow Double-Runner Skates.

The Samuel Winslow Skate Mfg. Co., Worcester, Mass., have just issued their new 1900 catalogue. Included in its contents, we notice a new specialty in their line, which is called the Double-Runner Skate, and is especially adapted for the use of children. A great many children, on account of weak ankles, are deprived of the pleasure of skating, for the simple reason that the skate with a single blade is not adapted to the small child. On this new double-runner skate the runners are placed quite a distance apart, and a child can

WINSLOW DOUBLE-RUNNER SKATES.

stand on them with perfect ease; in fact, they feel as safe when using them as though they were standing on the floor, and on account of the distance between the runners, there is no strain of any moment on the ankles. It should be remembered that this skate is designed for children, and is not supposed to be used by a professional skater. At this season of the year the skate is meeting with a great demand from the trade all over the country, and heavy sales are naturally expected on them during the holidays, which makes it advisable that dealers designing to handle the same should

enter their orders early, or there may be some difficulty in obtaining the necessary supply. The Winslow people are makers of all kinds of ice and roller skates, and will be pleased to have the trade generally request their new catalogue.

#### Drake Acetylene Gas Burners.

The Drake Acetylene Apparatus Co., 36 Hathaway Street, Cleveland, Ohio, as will be noticed in their advertisement on page 36, are the manufacturers of acetylene gas apparatus

FIG. 1.

in which the improved gas burner is used which we illustrate herewith. Fig. 1 illustrates their style No. 1, and can be used with one side of the burner turned off in order to use the other for a hall or night light in a safe and inexpensive manner, or for any other purpose where a small light is required for temporary use. The little needle valve used in its construction at the same time removes any obstruction from the rear of the gas orifice. While this burner is not designed to regulate to all sizes of flames, it is made in half, three-quarter and one foot sizes when the needle valve is withdrawn. The burner itself is composed of seven interchangeable parts, all of which are illustrated in the cut here given, Fig. 2. Should any portion of the burner shown in these several parts fail in any way, it would be a very easy matter to procure extra parts to replace them. It is claimed that the tips are very easily replaced by removing the old ones, setting in the new and placing them in the vise hori-

FIG. 2.

zontally, forcing them in by turning up the vise. The lava tip used in both styles is bored out in the front and rear, leaving a very thin wall where the extremely minute hole is bored. This renders it less likely to become clogged, and makes it more easily cleaned if it gets in that condition.

#### Covert's "Yankee" Roller Snap.

The Covert Mfg. Co., West Troy, N. Y., who are well known leaders among manufacturers in the snap line, having for twenty-seven years made their trade-mark a sufficient guarantee of the superior quality of the goods that bear it,

are never satisfied with their well doing, but steadily apply their inventive ability to manufacturing something new. Their latest achievement is the "Yankee" Roller Snap, which we illustrate herewith. It is made in all styles and sizes, and they claim it to be the best snap they have ever manufactured. It is a veritable safety snap, and like all goods manufactured by this company, is made from the best material in every respect. They have just distributed 50,000 copies of their new catalogue, it having been their intention

COVERT'S "YANKEE" ROLLER SNAP.

to mail it to every general and saddlery Hardware dealer, as well as saddle and harness maker in the United States. It is very complete, and illustrates and describes the many valuable articles manufactured by this company, and should the reader not be in possession of the same, he should write for one.

#### Williamson's Stag-Handle Corkscrews.

Williamson W. N. Co., Newark, N. J., taking into consideration that the holidays are coming on apace, and that a demand for something of this description should be among the possibilities, are offering a line of handsome stag-handle corkscrews, which includes six different patterns and promises with those who handle this description of goods, to be exceedingly popular with the holiday trade. We present an illustration herewith of one of the most desirable styles. The handles mounted on these screws are of first quality, genuine stag horns selected for their special adaptation to an article of this description. They are highly polished, and are shown in two varieties, the straight stags, measuring 4 to 4½ inches in length, and stag tines, which measure all the way from 6 to 8 inches long. The corkscrews themselves, of course, are of the well-known "Williamson" high-grade goods, and fin-

WILLIAMSON'S STAG-HANDLE CORKSCREWS.

ished in a superior manner, especially for this festive season. It would be worth the Hardware dealer's attention to have an assortment of these goods among his holiday offerings, as they are not only suitable and handsome ornaments for the buffet, but promise to be good sellers at a large profit for too many fields of social distinction to enumerate. The illustration herewith shows their 2042 pattern, but for description of the other styles and particulars connected therewith, it would be well to write for their illustrated leaflet, which has just been published.

**Noxall Riveter and Buckle Punch.**

The H. M. Sheer Co., Quincy, Ill., are distributing through the Hardware and supply trade the Noxall Combined Riveter, Rivet Magazine and Buckle Punch, which we illustrate herewith. It is a complete outfit designed for repairing harness, belting, etc., or anything where a well-clinched rivet will serve the purpose. It rivets on loops and keepers, punches buckle holes in harness and holes in belting for lacing, etc. It is light and compact, weighing but twenty ounces, and if necessary can be carried in the pocket. Being portable, it

NOXALL RIVETER AND BUCKLE PUNCH.

can be used in any position for mending harness, even while on the horse. One movement of the lever will drive the rivet, clinch it and countersink both heads. The manufacturers state that it is of the very best material and workmanship throughout. The plunger screw and punch are of finely tempered steel, and all the wearing parts are chilled and hardened to make them less susceptible to wear. It is handsomely finished in black baked japan, making the device ornamental as well as useful. The rivet magazine holds from 50 to 60 assorted rivets, and is fitted with a nickel-plated screw cap. The punch is the regular steel tubular, the same as used on the best lever harness punches, and is prevented from dulling the edge by inserting a block of softer material. It is intended to be marketed at a moderate price, and is worthy the consideration of any Hardware dealer who may handle a regular punch.

**Bulldog Wire Rope Clamp.**

The Bronson-Walton Co., Cleveland, Ohio, who are represented in New York by John H. Graham & Co., 113 Chambers Street, as their direct selling agents, have put on the market what is known as the Bulldog Wire Rope Clamp. This consists of a clamp, the upper surface of which has spiral corrugations to fit between the strands of the rope, and by this means preventing it from slipping. A screw-

BULLDOG WIRE ROPE CLAMP.

bolt bent in the form of a letter U is used to assist in the operation of pulling the two ropes tight against each other, and against the corrugated plate. The bolt is manufactured from the best wrought iron, and the plate of iron is so malleable that if the strain were sufficient for it to bend double it would do so without fracture. Both are made heavily enough to firmly clasp the rope without a possibility of breaking. These clamps are made in ten sizes, running from 1-4 to 1 1/2 inches, rising by eighths, except that there is also a 5-16-inch size. The manufacturers guarantee these clamps to stand as much strain as the wire rope to which they are attached.

**The "Busy Bee" Washer.**

The Lake Erie Mfg. Co., Erie, Pa., are the manufacturers of the Busy Bee Washer, which is placed upon the market at the present time as a washing machine that is moderate in price, simple in construction and easy in operation. An illustration of this is given herewith, by which it may be observed it can be attached to any ordinary wash tub, being easy to put in or take out in an instant. The small iron brackets to hold it in place may remain permanently in the tub, as they do not prevent its use for other purposes. Every

THE "BUSY BEE" WASHER.

effort is made to use the best material in its construction. The wooden parts are well seasoned, and oiled to prevent checking; all the iron parts are galvanized so that they cannot rust. The springs used in connection with its construction are double-tinned for the same purpose. The manufacturers are willing to guarantee it in every essential particular, and desire a Hardware dealer in every town to act as the agent for its sale. They will gladly enter into correspondence having this end in view with any dealer desiring the same.

**The "D. T." Drive Hook.**

The Wire Goods Co., Worcester, Mass., have just issued a supplement to their larger catalogue, in which they illustrate their line of wire coat and hat hooks, of which they make an extensive assortment, including over 100 different styles, covering wardrobe, ceiling, harness, fire-pail and a number of special lines of the class of goods with the manufacture of which they have been identified for a number of years. We give herewith an illustration of their popular drive hook, which is marketed under the name of the "D. T." Its extreme popularity is attributed to the fact of the simple man-

THE "D. T." DRIVE HOOK.

ner in which it can be used for household purposes. Three blows of the hammer and the hook is in place to stay. After adjustment it never twists, and, in fact, it is a somewhat difficult matter to remove it after it is once properly in place. The ease with which it is driven in place and the consequent saving of time and labor prepossess the architects materially, and they take pleasure in specifying it.

**PATENTS** Preliminary Consultation Free.  
**HENRY J. MILLER,**  
55 Equitable Building, BOSTON.

## REVIEW OF THE MARKETS.

**Hardware:** Business is reported as continuing in extremely satisfactory condition. The election has, of course, some influence on the general activity, but less attention is being given to it than has previously been customary, the canvass in each succeeding election being materially shortened. Considerable impetus will be given to general trade when the anticipated result is definitely ascertained.

**Wire Nails:** The Wire Nail market has been susceptible to no especial change, and in the present activity in this staple line, scarcely any change is indicated. The following quotations still represent the market, f. o. b. Pittsburgh, terms 60 days or 2 per cent. off in 10 days:

|                                    |        |
|------------------------------------|--------|
| To jobbers in carload lots .....   | \$2.20 |
| " less than carload lots .....     | 2.25   |
| To retailers in carload lots ..... | 2.30   |
| " less than carload lots .....     | 2.40   |

New York prices remain as heretofore:

|                                          |                |
|------------------------------------------|----------------|
| To retailers, carload lots on dock ..... | \$2.48         |
| " less than carload lots on dock .....   | 2.55           |
| Small lots from store .....              | \$2.60 to 2.65 |

**Cut Nails:** The demand for Cut Nails is quite moderate, by comparison with other leading staples, and while a steady trade is noted, it is not of large volume. Prices continue as previously quoted, f. o. b. Pittsburgh, terms 60 days 2 per cent. off in 10 days:

|                                              |        |
|----------------------------------------------|--------|
| Carload lots .....                           | \$1.95 |
| To jobbers in less than carload lots .....   | 2.00   |
| To retailers in less than carload lots ..... | 2.10   |

New York prices remain the same, the following quotations representing the market:

|                                                      |                |
|------------------------------------------------------|----------------|
| To jobbers in carload lots on dock .....             | \$2.13         |
| " less than carload lots on dock .....               | 2.18           |
| To retailers in less than carload lots on dock ..... | 2.31           |
| Small lots from store .....                          | \$2.30 to 2.35 |

**Barb Wire:** The demand is slackening materially in the sale of Barb Wire, the business done being extremely light. Prices remain as previously quoted for domestic trade, as follows, f. o. b. Pittsburgh, net cash 60 days, or 2 per cent. discount for cash in 10 days:

|                                                       |        |
|-------------------------------------------------------|--------|
| To jobbers in carload lots, Painted .....             | \$2.50 |
| " Galvanized .....                                    | 2.80   |
| To jobbers in less than carload lots, Painted .....   | 2.55   |
| " Galvanized .....                                    | 2.85   |
| To retailers in carload lots, Painted .....           | 2.60   |
| " Galvanized .....                                    | 2.90   |
| To retailers in less than carload lots, Painted ..... | 2.70   |
| " Galvanized .....                                    | 3.00   |

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden 10 cents per 100 pounds higher than the prices above named.

**Plain Wire:** There is still a very fair trade being done in Plain Wire, activity in other lines in which this figures as raw material assisting materially in keeping up a satisfactory demand, which, it is expected, will improve after election. Current quotations remain as previously established, f. o. b. Pittsburgh, terms 60 days, or 1 per cent. discount for cash in 10 days:

|                                    | Base sizes. |        |
|------------------------------------|-------------|--------|
|                                    | Plain.      | Galv.  |
| To jobbers in carload lots .....   | \$2.15      | \$2.55 |
| " less than carload lots .....     | 2.20        | 2.60   |
| To retailers in carload lots ..... | 2.25        | 2.65   |
| " less than carload lots .....     | 2.35        | 2.75   |

Above prices are for the base numbers, 6 to 9. The other numbers of Plain Wire and Galvanized Wire take the several advances noted in the following table:

### PLAIN FENCE WIRE ADVANCES (CATCH WEIGHTS.)

| No.              | Base   | Galvanized.   |
|------------------|--------|---------------|
| 6 to 9 .....     | \$0.05 | \$0.40 extra. |
| 10 .....         | "      | .40           |
| 11 .....         | "      | .40           |
| 12 and 12½ ..... | "      | .40           |
| 13 .....         | "      | .40           |
| 14 .....         | "      | .40           |
| 15 .....         | "      | .75           |
| 16 .....         | "      | .75           |
| 17 .....         | "      | 1.00          |
| 18 .....         | "      | 1.00          |

**Wire Picture Cord:** It has for a long time been deemed desirable by the manufacturers of this line of goods that a new price list should be agreed upon that would avoid the irregularities so prominent in the one formerly used by the trade. A majority of the manufacturers have agreed upon the Price List which we give herewith, and which is regarded as being in harmony with the wishes of the trade:

### PRICE LIST OF WIRE PICTURE CORD.

Adopted October 2, 1900.

#### TINNED BRAIDED OR TWISTED.

| Numbers |      |      |       |       |       |       |       |       |       | Per Box of |        |

| 20      | 21    | 22    | 23    | 24    | 25     | 26     | 27     | 28     | 29    | Yd.        | Coils. |
| \$9.00  | 13.50 | 22.50 | 30.00 | 45.00 | 60.00  | 67.50  | 75.00  | 85.00  | 12-25 | "          | "      |
| 4.50    | 7.50  | 10.50 | 16.00 | 21.00 | 26.50  | 31.00  | 36.00  | 45.00  | 12-10 | "          | "      |
| 20.00   | 30.00 | 45.00 | 65.00 | 85.00 | 105.00 | 125.00 | 150.00 | 185.00 | 144-3 | "          | "      |
| 3.75    | 6.25  | 8.75  | 13.00 | 17.50 | 22.00  | 25.00  | 30.00  | 37.50  | 12-25 | Ft.        | "      |

All wire supplied on spools or reels. Quotations from above list are given as 80 and 10 to 80 and 10 and 10 per cent.

**Cordage:** The market on Cordage cannot be considered as exceedingly strong on Manila, so many influences seem to have an effect, causing the weak conditions prevailing at present. The following quotations represent the market at the present time:

|                                      | Pounds. | Cents. |
|--------------------------------------|---------|--------|
| Manila, 7-16 inch and larger .....   | 9½      |        |
| " ¾ inch .....                       | 10      |        |
| " ½ inch and 5-16 inch .....         | 10½     |        |
| Sisal, 7-16 inch and larger .....    | 6½      |        |
| " ¾ inch .....                       | 7       |        |
| " ½ inch and 5-16 inch .....         | 7½      |        |
| " Lath Yarn. Medium and Coarse ..... | 6½      |        |

**Linseed Oil:** The market on Linseed Oil is in an extremely buoyant condition, prices having advanced materially since our previous quotations. The Dean Linseed Oil Co., under date of October 20th, quote as follows:

|                                                                                |                      |
|--------------------------------------------------------------------------------|----------------------|
| In lots of less than 5 barrels .....                                           | 76 cents per gallon. |
| In lots of 5 barrels or more .....                                             | 75 cents per gallon. |
| The five barrel price only applies to deliveries of that quantity at one time. |                      |
| Bolled Linseed Oil, 2 cents per gallon higher than Raw.                        |                      |
| Calcutta Oil, 85 cents per gallon.                                             |                      |

### THE PHILADELPHIA TRADE.

Until now the weather has not been such as to hasten the sale of Fall goods, and skates, sleds, snow shovels, sleigh bells and Winter goods have been very slow of sale. Despite all this, however, and also in the face of a falling market and a presidential campaign, the volume of business is quite satisfactory and surprisingly good. Orders are coming in freely, and seem to point to the fact dealers everywhere are short of goods. It is very evident dealers are buying only from hand to mouth, and yet even this compulsory business results in a very fair volume. This is most encouraging and seems to point towards continued prosperity.

We are now only two weeks away from the presidential election, when the shadow of doubt that has been hanging over us will be removed, and results determined.

In the past few days the weather has taken a colder turn, and we may now begin to look for some trade in seasonable goods, and so have every reason to believe the month will be quite satisfactory.

The changes in prices which have occurred have been more

in the direction of equalization of prices and the finding of a new basis, and, while some declines have been announced, the volume of stocks on hand is probably not sufficiently large to cause much serious loss to the dealer.

Collections are satisfactory in most sections, and the settlement of the coal strike will probably put business in that section on an excellent footing, as not only has the strike been settled and employment given to many thousands of men and boys, but this employment has come at increased wages, thereby increasing the purchasing power of the community.

BIDDLE HARDWARE CO.

#### THE PITTSBURGH TRADE.

The hunting season opened on the 15th inst., and judging from the demand for guns and shells, every bird will have a man or boy after it. We are having fine Fall weather now, and as game is reported to be more abundant than usual, the shells will not all be wasted. Our game laws as now upon the statute books prevent the sale of birds or deer, either in season or out of season, so that everybody who wants a game dinner must shoot it himself. Whether this provision can be enforced remains to be seen, but we have an impression that all the quail on toast that will be served at our hotel tables will not be shot by the proprietors. General business is fair, not quite the push about it we would like to see, but in the midst of a Presidential campaign we must not expect too much. At the present prices of iron, steel and near products, and with the purchasing power of the West and South due to good crops and good prices, there must be a heavy demand as soon as the election is past and people settle down to regular business. The Pittsburgh & Western Railroad and the Pittsburgh Junction Railroad are now passing into the hands of the Baltimore & Ohio Railroad. This is a move that has been on the books for some time, and is being very quietly put through. The Baltimore & Ohio thus secures a very valuable Northwest outlet, which was almost indispensable to its growth.

LOGAN-GREGG HARDWARE CO.

#### THE CLEVELAND TRADE.

Business is good, notwithstanding some declines continue. With the present price of ore, coke and labor, pig iron is not high, and with an addition of only \$4 above pig iron for steel, makes the price of billets below the cost of production. Finished material, based on the present price of stock, is cheap, so we can safely predict that until the ore, now in the hands of the furnaces, is used, no large amount of profits can be expected from their output. The price of ore will probably be reduced for 1901, but very little of the new ore will be used for the first half of the year. The average price of iron and steel goods for the first half of the year are not likely to be lower than the present price; they are more likely to advance.

The people in this country are in condition to pay for what they want, and the expansion of wants is likely to surprise the most optimistic. The expenses of so large a class are limited only by their income, and the increase of income of so many of this class is sure to increase the demand. The capacity to expend lavishly is an American trait, and never in human history have conditions been more favorable for its indulgence. These are the reasons for expecting a good business in 1901. Wages are not likely to be reduced, as the most persistent of all the Trusts, and the most powerful, will use their influence to prevent that. THE LOCKWOOD-TAYLOR HARDWARE CO.

#### THE BALTIMORE TRADE.

The Fall trade has, so far, been most satisfactory, but owing to the approaching election and the fact that the majority of large orders have been placed, there is a very perceptible falling off at present. For two weeks we worked entire force until about 11 p. m., and now, though we imagine trade is dull, find little time to discuss politics, notwithstanding the atmosphere is heavily charged with same. We were sorry to have been informed last week that the Laughlin Nail Works had adopted the selling prices of the

Shovel Association on the goods they manufacture in this line, and it is perhaps another illustration of too much association influence. This tendency of monopoly and consolidation so prevalent among manufacturers does not seem to abate, and after Mr. McKinley's re-election what the so-called trusts will do to us might make a fellow's hair curl. Political agitation is beginning to wax very warm, and the result of election is awaited with interest.

H. W. WEBB & SONS.

#### THE NASHVILLE TRADE.

Notwithstanding the many adverse conditions under which we are laboring, business for the past thirty days has shown a very marked improvement. Just on the eve of a national election, we do not hope for a normal condition, but retail stocks are light and "election fever" is high, but when the crisis is past we really anticipate a rush, let either side win. With 10-cent cotton and other farm products in the same proportion, no indication of a further decline in iron, and the people with money to spend, no one man or party can keep the wheels of commerce from rolling. Collections from the agricultural districts are fully as good as for the same time a year ago, and fewer merchants are asking for "just a little more time." The weather is perfect, and Fall seeding is going on uninterruptedly, naturally increasing the trade on plows and repairs as well as for plowing harness. The demand for smooth wire and nails is exceptionally heavy. We take it for granted that all members of the National Hardware Association will be present at the Richmond meeting, which will doubtless be both pleasant and profitable, provided nothing happens to keep our rotund secretary-treasurer away. Without him it would be like the play "Hamlet" with Hamlet left out.

H. G. LIPSCOMB & Co.

#### THE CHICAGO TRADE.

Trade with us continues very brisk. The usual business disturbances, caused by politics incident to a national election, we are glad to say, have not yet manifested themselves, as in the past, and we feel will be of little consequence this time.

While the markets on a few lines have shown somewhat of a weakness during the past 30 or 60 days, due partly to a lack of orders and the disbanding of some associations, we look for no further weakening at this time.

On the contrary, several lines which have been badly cut up for months now appear to be stiffening, and no doubt will be quickly followed by others, before or shortly after the coming election.

All copper goods, while appearing high at prices that have been ruling during the year, remain firm, and galvanized iron, nails and barbed wire are now very stiff, which is every indication of advances about to be made on other items at no distant date.

Present values on all Hardware to us seem very low, and that class of trade which can read "the signs of the times" appears to be taking full advantage of same.

All "old stocks" in the hands of jobbers, as far as we can learn, have about been disposed of, and as orders are now being placed with manufacturers, it will unquestionably cause a healthy and legitimate strengthening of prices all along the line.

WELLS & NELLEGAR CO.

#### THE OMAHA TRADE.

Business is holding up to a remarkably high level in the way of volume and of tonnage. In fact, during the past sixty days we have handled a larger tonnage than ever before, and the demand seems to be remarkably well distributed, though noticeably heavier in the staple lines, like wire, nails, etc. Profits, while below normal, are perhaps all that we could expect in the present condition of the market, and though we should be glad to see them larger, yet we feel some satisfaction in the fact that there is still a little left. Tin plate has been extremely difficult to procure on account of the mills being closed down, and some little inconvenience

has been experienced, but by swapping stocks we have managed to piece out and keep our customers from suffering. Collections are up to the average and politics appear to affect business very little indeed, as everybody is too much occupied taking care of their own affairs to talk politics, though we expect the majority will be found on the right side when the time arrives to record their opinions.

RECTOR & WILHELMY Co.

#### THE SAGINAW TRADE.

The weather has been very fine this Fall up to the present time, last night bringing the first frost. Business has not its usual snappy appearance, owing to politics, as people are going on the plan of hand to mouth until after election. I have heard of some large timber land sales deferred till after election.

If there is no change in the administration we look for a pretty good business. If there should be a change we look for a big slump.

MORLEY BROTHERS.

#### THE SAN FRANCISCO TRADE.

The much desired rain is falling to-day, one week before the date of this issue of *Hardware*, and if a prediction of a member of the jobbing trade is verified, the purse-strings of the agriculturist and miner will now open and bestir business with a push.

The local markets continue in good shape. Aside from the sharp decline in wheat the last fortnight, which was purely sympathetic with Eastern markets, most staples are firm. The export business of the port thus far this year shows a material increase over the same period last year, and the transports continue to take out large quantities of merchandise, notably, iron and steel and bicycles and machinery of all kinds, to the Orient. This trade has been a great blessing to San Francisco and California, and has kept business active, whereas it might otherwise have been dull. The California farmer is profiting largely by the military operations in China and the Philippines, as witness the rise in hay, oats, horses and other products of the ranch. There has not been a dull season in this city for nearly four years, and if the election results in a continuation of the present financial conditions, there is no reason why trade should not be good for another similar period.

And that these happy trade conditions are to remain undisturbed appears to be a question that is already settled, in so far as Major McKinley and the San Francisco trade is concerned. "McKinley is elected," the trade says; "and in the way of politics we are now only devoting ourselves to the election of men that will work with him in Congress, hence we are organized under the title of The Business Men's Julius Kahn Club."

This is a strong and influential club of representative business men, irrespective of party affiliations, and among its most active members, who ardently desire that for faithful service performed, Congressman Kahn, like President McKinley, shall be returned to Washington for a second term, are William R. Wheeler, of Holbrook, Merrill & Stetson; Andrew Carrigan (Dunham, Carrigan & Hayden Co.); H. D. Loveland, Superintendent Merchants' Mutual Adjusting Association; A. C. Rulofson (Baker & Hamilton); Charles F. Tay (Secretary George H. Tay & Co.); A. A. Watkins (W. W. Montague & Co.); I. F. Littlefield (W. P. Fuller & Co.); Wakefield Baker (Baker & Hamilton); Irving M. Scott (Union Iron Works); George H. Ismon, Pacific Coast manager sales department American Steel & Wire Co.; F. H. Ellis, President Palace Hardware Co., and Frank F. Osborn, President Osborn Hardware & Tool Co.

The case of the Carnegie Steel Co., Limited, against Ezra T., Charles S., and Willard H. Stimson, commenced in the Superior Court in this city, has been transferred to the Superior Court of Los Angeles County, on the ground that none of the parties interested are residents of this county, while two of the Stimsons reside in Los Angeles.

The suit was commenced April 17, and is for the recovery of \$11,956.45, alleged balance due for structural material used in the erection of the Douglas Building in Los Angeles.

The original agreement entered into between the Carnegie Company and the Stimsons provided that all material should be furnished on or before July 21, 1898. This was not done, but the Carnegie Company claims the failure was due to alterations in the specifications, for which they were not responsible.

TRADES PRESS ASSOCIATION.

#### THE GRAPHITE INDUSTRY.

We are on velvet. That is to say, that the third quarter of the year ends with sales equal in amount to the total of the whole year of 1899; therefore, the balance of this year is bound to show an all increase.

This we consider a pretty good showing, because last year was one to be proud of.

The increase cannot be attributed entirely to generally larger orders, but partially to the increased facilities for manufacturing, due to the large and costly addition to our plant, planned last year, but only recently completed. It does show, however, that we planned wisely, for otherwise we would still be subjected to the annoyance of delays and promises which made our lives miserable before. We are very proud of our new factories, not only at our main works in Jersey City, but at our new graphite mines at Hague, N. Y.

Customers can now feel assured that when they see the advertisements of the Dixon products it means prompter deliveries should they need the goods.

Prices are steady, based upon the stability of the raw material market. We shall make reductions in one or two lines of greases and cycle chain graphites in quantity lots, due notice of which will be given to the trade.

From our point of view, the business horizon seems particularly clear and bright for Fall and Winter trade, without regard to the political situation, which is evidently taking care of itself.

JOSEPH DIXON CRUCIBLE Co.

#### Mica.

Eugene Munsell & Co., 218 Water Street, New York, and 117 Lake Street, Chicago, Ill., who are the oldest dealers in mica in New York, having been established in 1840, and whose advertisement will be found on page 42, carry a complete stock of all sizes of mica in two qualities to suit the need of every stove or Hardware dealer, and are one of the few large miners, importers and wholesale dealers who understand the necessity for carrying an extensive stock, in all sizes, of an article so important at this season of the year. These qualities are marketed under the following names: "North Carolina" mica, which is a selected, clear and lustrous mica of the highest grade, being guaranteed by the firm to be equal to anything on the market; and the other grade is called "Wyoming" mica, which, though not perfectly clear and as perfect as the "North Carolina" mica, is in all other respects equal to it, being well known to the trade and having an established reputation. They call particular attention to the fact that they put up assorted packages especially for the convenience of dealers who do not desire a large stock, but like to have a variety of sizes even in a small supply covering each. These assorted packages they are prepared to furnish in either of the above qualities. They are willing to deliver mica anywhere in the United States free of transportation charges, which is an important fact with dealers generally.

If the Chinese themselves are to be believed, the Chinese Empire has been in existence for more than 100,000 years. Other students say that it was founded 2,500 years before Christ, and by some Fohi, supposed to be the Noah of the Bible, is considered the founder.

### New York Credit Men's Association Dinner.

The New York Credit Men's Association gave a dinner on the 18th inst. at the Drug Club, and after the good things were disposed of there was a business meeting.

It was not all business; there was an exchange of ideas on business topics, with a spirit of good fellowship that made the evening one of both pleasure and profit to the hundred or more credit men who were present.

The combination of business and pleasure was carried even to the dinner card, for opposite the menu were printed some bankruptcy statistics under the caption, "How the Bankruptcy Act Works."

The figures showed that since the passage of the act there have been 31,965 voluntary and 2,403 involuntary assignments. Underneath the figures appeared the words: "Doesn't it jar you?"

Vice-President Charles E. Meeks, with the National Lead Co., presided at the meeting, and after the cigars had been lighted introduced W. A. Bogardus, chairman of the Legislative Committee.

Mr. Bogardus spoke briefly of needed State legislation. He said that it was wrong to discount a man's statement when he consented to make a statement as to his business, and said that such statements should be absolutely correct and taken at par.

The honest purchaser who furnishes an honest statement, he said, suffers on account of the dishonesty of other men, and he urged the passage of strict laws to punish those who furnish false business statements.

He said that he did not think any law could be passed to prevent a man selling his stock off in bulk, for if he was solvent he had a right to sell it any way he wanted to, and if he was insolvent his case was already covered by national legislation.

C. E. Meeks presented a report from the Committee on Investigation and Prosecution, giving a brief history of two or three cases which had been taken into court on criminal charges.

The chairman then introduced Judge William J. Gaynor, of the Supreme Bench, as the first speaker of the evening. Judge Gaynor was given the closest attention, and was frequently interrupted by applause.

He spoke first of the English laws of debtor and creditor, recalling that it has only been in recent years that the reality of a debtor could be taken for his debts, although the creditor formerly had the power to seize the debtor's body.

He said that he was not expressing an opinion, but that many profound thinkers believed that the State was not under any obligations at all to pass laws to protect creditors, and that if a man contracted a bad debt it was his own lookout, and not the business of the State.

He said that during the last quarter of a century the greatest demoralizer of credits had been the changing of the business of the world from a double standard to a single gold standard of money.

He pointed out that a few years ago there was only one gold standard country in the world, and that now the world's business is upon the single gold standard.

He said that he would not attempt to say which was the proper standard, but that the change had been brought about with hardships to many, and that to change it back again would unsettle things again, and therefore he expected that it would remain as it was.

He also spoke of the combinations popularly called "trusts." He did not attempt to say whether they were good or bad, but he said that both parties were responsible for them, because the law permitting one corporation to own the stock of another corporation had been passed without a protest from either party.

Judge Gaynor spoke of the rehabilitation of the nation's credit, and said that to-day the credit of no other country in the world was better than that of the United States.

"Judge" W. B. Green followed Judge Gaynor with a lot of funny stories, and after he had finished Theodore Aub brought the meeting back to business matters again with a paper on the national banking law.

Mr. Aub said that, as a whole, it was as good as could be expected in a compromise measure, but that the interpretation which held that if a debtor is paying a creditor for installments and fails, after making a part payment, the creditor must pay into the estate what he has received before he can prove his claim for the balance, was very far wrong.

He advocated the passage of the Ray bill, which, he said, would be introduced at the next session of Congress, and which proposes several amendments to the present bankruptcy law.

Professor C. W. Hastings, Dean of the New York University College of Accountants, also addressed the meeting, and made strictly a "shop talk."

Altogether, it was one of the most enjoyable meetings held by the association, and the interest taken in the proceedings was evident from the large number of representatives of important banks, companies and solid firms already enrolled on its list of membership.

### Reduction in Prices of Manufactured Articles.

A remarkable fall in the prices of manufactures in nearly all of the great classes is shown by the official figures of the Treasury Bureau of Statistics prepared for the current number of the Monthly Summary and by recent issues of *Dun's* and *Bradstreet's*. Comparing prices at the beginning of the present month with those at the beginning of the present year, a fall of from 10 per cent. to 40 per cent. is shown. Tin plate shows a reduction of 24 per cent. on October 1, 1900, as compared with January 1, 1900; refined petroleum, 21 per cent.; common window glass, 12 per cent.; wire nails, 30 per cent.; barbed wire, 26 per cent.; Bessemer pig iron, 46 per cent.; steel rails, 26 per cent.; yellow pine lumber, 14 per cent.; sisal rope, 33 per cent.; manila rope, 32 per cent.; leather, 10 per cent.; shoes of various grades, from 7 per cent. to 10 per cent.; woolen dress goods of various grades, from 5 per cent. to 12 per cent. The prices of leading articles of manufacture and farm production are regularly gathered by the Bureau of Statistics for publication in its monthly Summary of Commerce and Finance, and it is from this and from the publications of *Bradstreet's*, *Dun's Review*, *The Iron Age* and the Cincinnati *Price Current* that the figures given herewith are obtained.

While nearly all of the figures relating to manufactured articles show a reduction on October 1, 1900, as compared with January 1, 1900, nearly all figures on prices of farm products show an advance during the same time. Corn shows an advance from 39 1-2 cents per bushel on January 1 to 48 1-2 cents on October 1; wheat, from 73.8 cents per bushel on January 1 to 79.7 cents on October 1; barley, from 45 cents per bushel on January 1 to 59 cents on October 1; hogs, from \$4.50 per 100 pounds on January 1 to \$5.30 on October 1; cotton, from 7 11-16 cents per pound on January 1 to 10.8 cents on October 1; cottonseed, from \$12 per ton on January 1 to \$17.35 per ton October 1.

### A Novelty in Advertising.

A novelty in outdoor advertising may be observed on the trolley road which runs between Washington, D. C., and Mount Vernon. In several places along the road the ordinary bill posters' signs may be seen, but many of them are equipped with a reflector containing incandescent lights placed at the top of the sign. An overhead line taps the trolley feeder and supplies current to the lamps, which at night throw their beams down upon the sign and illuminate it for the benefit of the trolley passengers. This is a unique idea, and, consistently carried out, should prove to be effective.—*Exchange*.

### Evening School of Electricity.

The Evening School of Electricity, under the direction of the Harlem Branch of the Young Men's Christian Association, at 5 West 125th Street, New York, opens for its third season during the first week in October.

The school will be in charge of S. A. Small, assistant instructor in electricity at Columbia College, and a man who is thoroughly practical from every standpoint, having seen active service in every branch of electrical work.

The sessions will be held on Tuesday and Friday evenings, and the course will consist of forty-eight lectures. Mr. Small will commence by thoroughly grounding the class in the fundamental rules and principles of electrical engineering, and during the course will cover fully the various branches of telegraphy, telephony, police and fire alarm telegraphy, arc lighting, alternating current apparatus, the distribution of electric power, the electric street railway, the electric automobile, the "X" rays and wireless telegraphy.

The lectures will be illustrated by diagrams thrown upon the screen by means of a powerful stereopticon, and in addition to this a large amount of apparatus will be used in illustrating the work.

### New Uses for Mineral Wool.

Mineral wool for the past twenty years has been almost exclusively used for insulating heat and cold and sound. According to the *Engineering and Mining Journal*, a patent has been secured covering certain methods of treating and using mineral wool, which are described substantially as follows: The invention relates to the conversion of mineral wool into elastic bricks, sheets, sectional pipe coverings, and similar moldings. It is thus made possible to apply mineral wool in a state of compression and consistency, as well as in shapes suitable for the intended application. If, for instance, a wall space is to be lined three feet in the clear between timbers or joists and three inches deep, the wool may be applied in the shape of elastic bricks, 9 by 4 by 3 inch size, of which twelve would be required for a course one foot high, or thirty-six for a square yard. In laying the bricks they are pressed together tightly; the courses stay in place and may be carried to the ceiling without being boarded up. They may also be cemented by wetting their contracting surface with a suitable agglutinating solution. For covering boilers the wool can be molded into sheets that are sufficiently pliable to be bent to the required curvature, and for covering pipes it can be molded into semi-circular sections about one foot long, that are easily fastened upon the pipes with a piece of string or wire. For all of these applications it is essential that the moldings should be somewhat elastic, as well as sufficiently tough to withstand rough usage, the latter property being especially desirable for the cheaper products, such as the bricks, so that they can be shipped in bulk. The brick molds may be made of either wood or sheet metal. Their depth should be about one-sixth more than that of the moldings that are to be turned out, and they should be perforated with small holes on all sides for the purpose of allowing the air to escape more freely while the wool is being compressed in them. When the contents of the mold are thoroughly moistened with agglutinating fluids they are subjected to a slight pressure, and afterward taken to the drying room, when in some three or four hours they are ready for shipment. Mr. A. D. Elbers is the patentee of this new method of utilizing mineral wool.

### Graphite and its Names.

MacCulloch's Dictionary of Commerce gives the following names for graphite: English, blacklead, plumbago, graphite, wad; Dutch, potlost; French, mine de plomb noir, plomb de mine, potelot; German, pottloth, reissbley; Italian, miniera di piombo, piombagine, carezolo; Latin, plumbago; Spanish, piedra mineral de plombo.

## JAP-A-LAC

is the hardest, smoothest, most elastic, brilliant and durable finish on the market for

**Floors and Interior Woodwork.**

It is also used on Furniture, Wire Screens, Radiators, Iron Fences, Carriages, etc.

Architects should specify it.  
Painters should use it.  
Builders Should insist on it.

Our magazine advertising is creating a demand for

**JAP-A-LAC.**

Dealers should write for our money-making proposition.

**The Glidden Varnish Co.,**  
Cleveland, Ohio.

### History of Pencils.

The lead pencil, the most common of all writing implements, is somewhat over 200 years old. The term "lead pencil," however, is a misnomer, as, in a mineralogical sense, there is not a particle of lead in its composition. The lead pencil originated with the discovery of the graphite mines in England, in 1664, during the reign of Queen Elizabeth. As graphite so greatly resembles galena, the German name for which was bleiglanz, it was given the name of blei, or lead.

In the early days of lead pencil making the graphite was sawed into thin sheets and cut into strips smaller and smaller, until they were of a size to be covered with light wooden slips, and thus serve as pencils.

The first pencils created much excitement. The graphite mines of England were considered of inestimable value, and were protected by law. But there was great waste—first, in digging, for many of the pieces were too small for cutting, and again in the manner of cutting the graphite, which was so crude that half the material was lost. So a binding substance had to be invented.

Glue, gum, isinglass and other substances were tried, but the graphite was only rendered hard and brittle and of uneven hardness. Its marks were faint and indistinct, and in those days if the point broke it was quite an undertaking to sharpen it again. First, the wood had to be cut away and the graphite heated over a light to soften it, after which it was drawn to a point with the fingers.

In 1795 Conte, a Frenchman, came on the idea of using pulverized graphite and binding clay. This discovery resulted in pencils of varying hardness, according to the amount of binding clay added, and each pencil was of exactly the same hardness throughout its length.—*American Stationer*.

### Oils from the Whale.

"Whale oil," said a dealer in oils, "is to some extent used as a lubricating oil, but not to a very large extent. When used for lubricating purposes it is more often compounded with mineral oils, which are cheaper. Whale oil is used for tempering steel; it is still used in a limited way by some people as an illuminating oil. Whale oil is used for making whale oil soap, used for killing worms on trees.

"Sperm oil is a fine lubricating oil, used on fine machinery, large and small; the fine sewing machine oil is likely to be sperm oil. It is used for illuminating purposes in safety lamps in mines, and it is used to some extent for lamps in warehouses, because of its small liability to explode, sperm standing a higher degree of heat than mineral oils. It is used as a signal oil on shipboard, for lamps and lanterns, and for sidelights, and so on; and on steamers for a lubricating oil. For all these purposes mineral oils and lubricating compounds have more or less supplanted it because

## THREE-BAR LEATHER

shoe-soles and top-lifts (for heels) are the best.

Write us; we'll give you points.

Baxter Schenkelberger & Co,

350 Congress street, Boston

of their greater cheapness, but sperm oil is nevertheless in demand for them. There are some other uses for whale oil and for sperm oil, which are still sold to larger and smaller users by the barrel or the can or gallon. Whale oil brings somewhere about 50 cents a gallon and sperm oil 60 cents or thereabouts, and the desirable qualities, for some uses, of these oils, once so commonly used, make a market for the comparatively small, and diminishing quantities of them now brought to sale, even though their prices are higher than those of the oils that have so commonly supplanted them.

"There is an oil produced from some part of the head of the whale that is much more costly than either whale oil or sperm oil. It sells, in fact, for as much as \$10 a gallon. This is watch oil, and it may be bought of dealers in watch supplies. It is used for oiling watches, and also for oiling the arbors, or journals, of the wheels of tower clocks. It is not only a fine lubricant, but it withstands cold remarkably well, not freezing except at an extremely low temperature, for which reason it is very desirable for such use in cold and exposed situations."—*New York Sun*.

### The Roundlap Cotton Bale.

The first attempt to make a round cotton bale was about fifty years ago, says Frank Hart, in the *Journal of the Franklin Institute*. A machine for rolling up cotton in the shape of a cylinder was patented in 1848, but nothing came of it. For many years mechanical minds labored to devise an efficient machine, and what is now known as the "American Cotton Company's Roundlap Press" is the sum of their combined efforts. It is covered by more than fifty patents. The press has two horizontal rolls, and a hydraulic cylinder, connected with a large air chamber, regulates the pressure automatically. To insure uninterrupted operation the press is built in duplicate. It takes up and bales, without stopping for the removal of finished bales. On the way from the gins to the press the lint passes through a lint flue with dirt pockets, by means of which all sand and dirt are removed. It then passes over a condenser having a velocity of about fifty revolutions per minute. The cotton barely touches the condenser drum, but is thrown off, the air and dirt passing through the wire cloth above, while the cotton in a fluffy mass some five feet thick, passes on over and falls into the bat-former, which delivers it to the compression rolls in a uniform bat ten or twelve inches thick. The bat moves at the same speed as the press, and thus a continuous lap of cotton is made, that unrolls as easily as it is rolled up. As it passes beneath the cotton roller the air is excluded, and the compressed cotton is wound around a core under a pres-

sure, which, light at first, is gradually increased automatically until the bale attains its full size. In this way, by a steady pressure of less than fifteen tons, gradually applied to all the cotton in detail, a bale is produced with a density of thirty-five pounds per cubic foot. By means of this moderate pressure, gradually applied as the bat moves forward under the roll, one end of every strand of cotton is in effect fixed while the pressure of the expelled air straightens out the fibre, and it is caught and held in that position. The air pressed out, the bale is indestructible by fire, is self-containing, and does not require iron ties. It is then covered with burlap, weighed, marked and tagged, and ready for shipment. From carefully prepared estimates, all of which are believed to be conservative, the saving that would accrue from the marketing of a 10,000,000 bale crop in roundlap bales is not less than \$44,750,000. This means that \$4.50 of the proceeds of every square bale of cotton is wasted. The roundlap bale saves all this waste.

### Store Character.

Many merchants do not realize what an important thing store character is. Stores have character just the same as individuals, and it is something upon which the personality of the owner has great effect. A merchant may almost be judged by his store. Every one knows what it is to go into a store and feel at once that peculiar sensation we call being "at home," and every one also knows what it is to go into a store and feel as if they were intruding. Everything about the place seems to partake of this general character. It need hardly be said that the store in which the buyer feels most at home will get most of his trade. Now, this store is not a dull, dingy or untidy place. Its floors are not covered with the accumulated dirt of months, or perhaps years, less the little that has been removed daily from the top with a broom. It is not a store where goods are kept in an untidy fashion and without any systematic attempt at order and display. It is not a store where the clerks are indifferent to their duties and unwilling to take the trouble to display goods, or where they continually endeavor to persuade the customer that he or she don't know what they want, and it is, above all, not a store where the proprietor or manager himself is not always on hand during business hours to give any attention that may be required to customers. A pleasant chat, if only while waiting for change, with the proprietor will often win the allegiance of a customer. We could name a score of stores that have a reputation for pleasant dealing with customers which is worth more than any other asset they possess, and which brings them annually numerous sales which might otherwise find their way elsewhere. We regret to say, too, that as many more could be named which have just the opposite sort of a reputation. The strange part of it is that this store character, once forced, seems never to change. Clerks come and go, and even proprietors, but the store seems always to create the same old impression upon those who have occasion to deal in it.—*Winnipeg Commercial*.

"Both o' Josh Jones' dead wives was grass widders and now he's courtin' another."

"Gosh! He must have th' hay fever bad."—*Ex.*

## FRYING-PAN CLOCKS

Are unique and ornamental as well as useful. They come in two sizes, 10 in. dial, with raised figures, and 6 in. dial, with painted figures.

Also Tile, Program and 60-Day Clocks.

### Wealth Discovered by Mules.

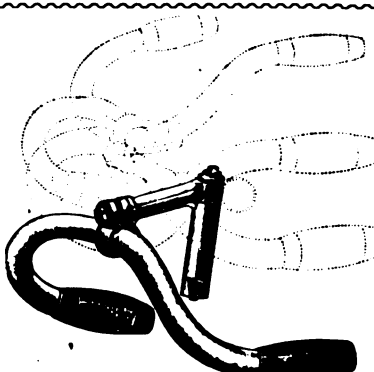

The animal with the gazelle-like eyes, the sardonic smile and the wicked pair of heels—the mule—is responsible for the tripoli excitement in Jackson County, Ind. The story of how the mule once did good is an interesting one. A. H. Harbaugh, a farmer living near Freetown, seven miles north of here, recently hitched a team of mules under a tree by the banks of Salt Creek. The mules were attacked by flies, and in their frantic efforts to drive them off they pawed up the ground. When the farmer returned he found a peculiar bluish dust enveloping the animals, and on the ground was a heap of sand as fine as flour. He became interested in the find and so sent a bottle of the sand to State Geologist Blatchley, who soon sent back word that it was tripoli, worth between \$4 and \$6 a ton. Mr. Harbaugh examined his own land and found that great deposits were on his farm. His neighbors, becoming interested, have done the same, and a number of them have been fortunate enough to find several small beds. The deposit on Harbaugh's farm is more than thirty-six inches thick.

Tripoli is not easily found, for at present there are but three extensive beds in the United States. The largest bed is in Newton County, Mo., and another extensive bed is in West Virginia.

Tripoli is used mainly for the purpose of polishing. It is rather hard, but it has not sufficient grit to cut metal or glass surfaces. It is claimed the Venetians were the first to use tripoli. It is often called "rotten stone," but its technical name comes from Tripoli, in which country it was first obtained. Tripoli is principally a silica, and it is formed from the shells of microscopic organisms, accumulated in oceans, and at wide intervals drifted, forming a deposit. Another use in recent years has been found for tripoli. It was for some time used as an absorbent in making high explosives,

but in the last few years guncotton and other materials have supplanted it. Besides this, tripoli is used in making soap, and it is claimed that delicate flesh is not injured by contact with it.—*Chicago Record*.

The business of the Chicago Hardware Mfg. Co., North Chicago, Ill., has increased to such an extent that it has been decided to add another building to their plant. This will be built of brick, three stories in height, and will cover a ground space of 40 x 75 feet. This has been needed by the company for a complete finishing department, and will enable them to give more space for work in other departments. The foundry will also be enlarged at an early date.

## THE "BARDSLEY" OIL DOOR CHECK AND SPRING.

This device—as now made—has the following features which are peculiar to itself:

No packing friction.

A releasing device—especially useful on apartment house doors and doors that close against a draught.

Spring of polished clock steel of superior quality—ensuring soft and noiseless action and great durability.

The mechanism is arranged so that the spring cannot be used wrong side up and thus bent out of shape or broken.

This Door Check as now made is recommended as being without a peer and the price is lower than any similar device in the market.

### JOSEPH BARDSLEY,

147 to 151 Baxter Street,  
NEW YORK.

### WHY IS THE

PAT. 1898.

### O. K. WASHER THE BEST WASHING MACHINE?

#### BECAUSE

- 1.—It is the only Rotary washer that has Revolving Steel Ball Gearing, reducing the friction and thus making machine so light running and almost noiseless.
- 2.—The tub is made of Louisiana Red Cypress Lumber.
- 3.—The wheel turns right or left, pin wheel or dasher reverses automatically, turning the clothes back and forth through the hot soap-suds, and cleaning them without rubbing them to pieces.
- 4.—This washer is made by experienced mechanics, and will out-last any other washer on the market.
- 5.—The lid on tub closes tight, no escape of steam.
- 6.—Has a solid wringer box with iron brackets.

### Oldest Bell in the United States.

In the office of C. T. Brown, of the Buckeye Mining Company, with offices at Socorro, is found what is alleged to be the oldest bell in the United States. This historic bell was made in 1545. In 1680 the church was destroyed by the Indians. In 1734 the bell was dug out of the ruins of an old church at Gran Quivera, an old Pueblo and Spanish city, said by several Spanish historians to have exceeded 20,000 in population. From Gran Quivera the bell was brought back to Socorro and hung in the old San Miguel church.

In 1781 this church at Socorro was destroyed by the Indians and the people driven south to Isleta near El Paso. In 1808 a colony of seventy families came from Belen, on the

Rio Grande, and resettled Socorro and repaired the old church, which stands to this day. The old bell was again resurrected and placed in the church. The bell weighs 461 pounds. The metal used in it came from a mine in Grant County called the Santa Rita de Copie. The women added all their jewelry of silver and gold to it. Chippings from the old bell have been assayed and it is found that it is worth over \$400 in gold and silver.

The bell was the first to ring on the American continent, and that on the banks of the Rio Grande. Seventy years before the Mayflower sailed into Boston harbor this old bell, with its clear tone, was calling together a brave little band of worshipers with their weapons of defense in one hand and the cross in the other.—*The New Mexican*.

### New Hardware Stores.

Arcadia, Wis.—Zeller Bros.  
Barberton, O.—W. W. Daniel of Cleveland is putting in a stock of Hardware for Miller Bros., who will open their store soon.

Barnesville, O.—The McKeever Hardware Co. has been incorporated by J. D. McKeever, C. H. McKeever, S. R. McKeever, Pearl McKeever and J. E. McKeever, a minor, by Clarkson H. McKeever, his guardian. The capital stock is \$25,000.

Berlin Center, O.—Seaton R. Jones.  
Currie, Minn.—W. R. Gardner.  
Cygnet, Ohio.—George Grant.  
Dennison, O.—John Kane.  
Edwardsville, Pa.—Barney Korn.  
Epping, N. H.—J. L. Thompson.  
Hamilton, O.—The Shafer Hardware Co. has been incorporated by George R. Shafer, Clara Murphy, Nelson Williams, M. Shafer and O. M. Rothenbush. They will deal in general Hardware. The capital stock is \$5,000.

Hinesburgh, Vt.—E. E. Patrick.  
Jelloway, Ohio.—Jay Pinkley and Frank Deling have purchased a Hardware store in Brink Haven.  
Lamoni, Iowa.—A. H. Graves.  
Laurens, S. C.—R. P. Milam.  
Martinsville, Mo.—C. F. Clevinger.  
Milton, Vt.—A. B. Ashley.  
Newton, Mass.—The Barber Bros. Hardware Co., which was recently incorporated, will be under the management of G. Albert Aston. J. W. Barber is the treasurer.

Princeton, N. J.—The William C. Vandewater Co. have organized to conduct a Hardware store at the corner of Stockton and Mercer Streets, and have filed articles of incorporation with the county clerk. Emma M. Vandewater has 478 shares and Harry H. Farr and James L. Briner, each one. The capital stock is \$12,000.

Riverside, Cal.—Lewis & Robinson.  
Rockville Centre, N. Y.—J. Van Vliet.  
Tallula, Ill.—E. A. Cary of this place and J. G. Croker of Gardner have formed a partnership here and will open up, in addition to Mr. Cary's already established farm implement business, a general Hardware store. Each stock will occupy separate buildings.

Tonica, Ill.—The J. C. Lambert Co. has been incorporated; capital, \$6,000; dealing in Hardware and novelties; incorporators, J. C. Lambert, K. E. Hartenbower, W. E. Kreider.

Wilmington, Del.—Lewis S. Fell, 7 West Fourth Street.

### Changes and Improvements.

Ashley, Pa.—Flory & Gemmel, the well known Hardware merchants on Main

Street, have added another addition to their store. Their building is now over 150 feet long.

Ballard, Wash.—W. M. Curtis is building an addition to his store on Second Avenue. The new building will be used as a stock room.

Beardstown, Ill.—William Frey, the Main Street Hardware man, finding that his business demands more room, has annexed the store just west of his own, so long occupied by William Schendel, the gunsmith.

Beaver, Pa.—Wilson Brothers, the successors of J. B. Wilson & Son. Hardware dealers of Third Street, will take charge of the business as soon as the invoicing of the large stock is completed.

Cohoes, N. Y.—The Hardware business of Robert W. Smith has been purchased by Elias V. Cady, who will carry it on in connection with his plumbing business.

Colchester South, Ont.—James Brown, who has been engaged in the Hardware business here for some time, and sold out lately, has purchased the Hardware business of George Sherrin of Thamesville, and will remove there soon.

Ensley, Ala.—The Ensley Stove & Hardware Co. have moved into their new store in the Weakley building, east side of Avenue E, their business having grown to such proportions as necessitated a move into more commodious quarters. They now cover twice the amount of floor space formerly used.

Hermann, Mo.—A. W. Dietzel, C. C. Thudium and Victor A. Silber have bought the Hardware business of Horace I. Klinge, and under the firm name of the Leader Hardware Co. will continue the business at the old stand with a largely increased stock of goods.

Inman, Kan.—J. D. Kaufman of Little River has sold out his Hardware store to Clutter Bros.

Lewisburg, Tenn.—Woods & Nowlin have sold their Hardware business at this place to E. S. Clayton of Huntsville, Ala. Mr. Clayton will take charge of the business at an early date.

Maple Park, Ill.—T. G. Seeley has purchased a half interest in a Hardware business at Sterling.

Michigan City, Ind.—J. E. DeWolfe, the Hardware man, has purchased of W. H. Davis & Co. the latter's Hardware business at 415 Franklin Street, and is now practically in possession of the same.

Nottingham, O.—John C. Cone has sold his stock of Hardware to Hultz & Mutton of 3541 Euclid Avenue, who are moving the goods to their place of business.

Salt Lake, Utah.—Plans are being completed for the new warehouse for the Salt Lake Hardware Co., on which work will

begin in December. The warehouse is to be erected on Second South Street, between Third and Fourth West Streets. It will be 80x200 feet, six stories high, and of brick, stone, iron and cement, so that it will be entirely fireproof. The cost is estimated at \$30,000.

Walla Walla, Wash.—Oscar and Thomas Drumbheller have purchased the store and business of the William O'Donnell Hardware Co.

Wapella, Ill.—The firm of Leightall & Wagoner, Hardware dealers, is dissolved by mutual consent, Mr. Wagoner retiring from the firm.

Waterloo, Ont.—George V. Moore of Galt has sold his Hardware store to Arthur McBean of Detroit, but formerly of Guelph and Woodstock.

### Business Embarrassments.

Caledonia, N. Y.—O. M. Humphrey, who has carried on the Hardware business here for several years past, has gone into bankruptcy.

Sabina, Ohio.—The Hardware firm of Dun & Holmes have made an assignment. Assets, \$7,000; liabilities unknown.

St. Louis, Mo.—A chattel deed of trust has been filed in the Recorder of Deeds' office by G. A. Rubelmann, president of the G. A. Rubelmann Hardware Co., of 905 North Sixth Street. Liabilities, \$85,000.

Westville, Conn.—James S. Peck, dealer in Hardware, farming implements and other goods, has filed a petition in bankruptcy in the United States Court, through his attorney, E. L. Isbell. Liabilities, \$4,719.30; and assets, \$891.60.

### Fires in Hardware Stores.

Athens, Ont.—W. Earle.

Blue Mound, Kan.—Butcher's Hardware store.

Chino, Cal.—C. A. Streble. Loss, \$2,000; insured for \$600.

Harrold, S. D.—Harrold Hardware Co. Loss, \$1,500.

Prescott, Ont.—R. W. Ross & Co.

Portland, Ore.—Dayton Hardware Co.

Steelton, Pa.—Keller & Mumma. Loss, \$10,000.

Sunbury, Pa.—W. H. Heim. Loss, \$5,000.

### Burglaries in Hardware Stores.

Beaver Crossing, Neb.—Gake & Son; revolvers.

Dubuque, Ia.—Smith's Hardware store; guns.

Mahaffey, Pa.—Wrigley Hardware Co.; cutlery.

Pottstown, Pa.—M. W. Baily; \$150.

West Roxbury, Mass.—S. D. Balkam; cutlery.

(TRADE MARK)

## Arc Lamp

450 CANDLE POWER

Burns 12 to 15 Hours with One Filling.

THIS is an air pressure lamp with overhead generator, which produces a light equal in brilliancy to any commercial

arc. We do not claim more than our lamp will do, but leave it to those who see it to judge of its candle power and light-distributing qualities. We do not claim 100 candle power and give you 40. Every lamp is guaranteed to do all we claim for it. It is made entirely of brass, of the heaviest gauge of any gasoline lamp made, and there is no reason why a lamp should not last for fifty years.

**ABSOLUTELY PORTABLE.**

Finished in Oxidized Copper. Presents a very handsome appearance.

It has been passed by Board of Underwriters without penalty. It is absolutely non-explosive. No smell; no smoke. You cannot only own your own gas plant, but electric plant as well, as our claims are not in excess of what we produce.

**MARTIN & MOREHEAD, 53 W. Washington Street, CHICAGO.**

## HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

### New Companies, Etc.

**Battle Creek, Mich.**—LaGrippe Wrench Co. is a new concern just organized, with \$50,000 capital. C. F. Beach is chairman; Arthur B. Williams, secretary; Erasmus D. Beach, treasurer; Julia E. Clark and J. Lyman, managers.

**Bradford, Pa.**—A new company has been recently started in this city, called The Bradford Bed Lock Co. It makes a patent bed lock, fitted to the end of bed slots. It is of simple construction, strengthening the bed, and prevents it from spreading, always holding the slats in their places.

**Canton, O.**—An organization of the Canton Knife Co., recently incorporated, has taken place.

**Cleveland, O.**—The Champion Rivet Co. has been incorporated, with a capital stock of \$100,000, with Wilson B. Chisholm, Edward S. Page, David J. Champion, A. C. Dustin and Ben P. Poll as incorporators.

**Detroit, Mich.**—Articles of association have been filed of the Sun Vapor Stove Mfg. Co., with \$20,000 capital. The shares are to be 2000 in number, and the stock has already been paid in.

**Dover, Del.**—A charter has been granted to the Penn-Bradshaw Co., a Scranton (Pa.) concern with a capital stock of \$50,000, to promote the sale of a patent device known as the Bradshaw automatic window opener.

**Dover, Ohio.**—The Reeves Mfg. Co. has been incorporated, for manufacturing iron and steel. Capital, \$100,000. Incorporators: S. J. Reeves, A. Feaser, E. W. Edwards, J. F. Rees, W. A. Edwards, A. J. Krautz.

**Franklin, Pa.**—The Grant Tool Co. has been incorporated. Capital, \$600,000. Incorporators: J. J. Grant of Cleveland, O.; C. Miller, W. J. Bleakley, W. H. Forbes, all of Franklin.

**Hammond, La.**—A corporation for the manufacture of bored well buckets has recently been organized in this city. The principal incorporators are: T. G. Davidson, G. W. Senttall and G. E. Dunn. They will begin the manufacture of the buckets as soon as the machinery can be placed.

**Hillsdale, Mich.**—The Michigan Rubber Co. has just been organized and incorporated in this city. The capital stock is \$12,000, all paid in. The business of the company will be to manufacture rubber novelties and goods, and also manufacture a patent washing machine. The new buildings are nearly completed, and the new company will begin operations in a few days.

**Jersey City, N. J.**—The Star Lock Mfg. Co. has been incorporated. Principal of-

fice, 76 Montgomery Street, Jersey City, N. J.; objects, manufacture builders' Hardware; capital, \$125,000. Incorporators: Orvelius H. Gilbert, Lorenzo P. Sturtevant, John W. Knause.

**Kittery, Me.**—The E. W. Bailey Co. has been organized to deal in window findings, with a capital stock of \$20,000, of which all is paid in. Edward P. Hatch is president and Edward W. Bailey treasurer.

**La Crosse, Wis.**—A plant will be started by Jan. 1 for the manufacture of packers' packages, tin lard pails, etc. The new concern has a capital of \$50,000. The stockholders are S. Y. Hyde, Clark Thompson and George W. Weber of St. Paul, and A. A. Morse, A. Hirshheimer and H. J. Hirshheimer of La Crosse.

**Lancaster, N. Y.**—Among the companies filing articles of incorporation is the Lancaster Forge and Blower Co., to manufacture and sell forges, blowers and blacksmith tools; capital, \$10,000. Directors, John A. Rudolf, Louis D. Voltz and Sigmund Bock of Buffalo.

**Lancaster, N. Y.**—Henry Schumacher of this village, until recently superintendent of the Lancaster Machine and Knife Works, is forming a company to manufacture machine knives and edged tools at Alden. Most of the capital has been subscribed, and the construction of the plant will begin soon.

**Peoria, Ill.**—The Peoria Implement Mfg. Co. has been incorporated; capital, \$2000; manufacturing agricultural implements. Incorporators: Charles C. Greene, William S. Kellogg, Hugh H. Martin.

**Pittsburgh, Pa.**—The work of installing a large nut and bolt works in the buildings formerly occupied by the Ihmsen glass factory, on the South Side, has been begun. The nut and bolt works will become a part of the Oliver Iron and Steel Co.'s plant on the South Side, and will be directly connected with it.

**Sharon, Mass.**—George R. and William R. Mann have sold their mill property and about thirty acres of land and water privilege to The New Century Roll Screen Co., a corporation capitalized for \$50,000. The company are to commence at once to equip and operate their plant for the manufacture of their roll wire window screens.

**South Bend, Ind.**—The Anderson Chilled Plow Co. has been incorporated; capital stock, \$10,000. Directors: Charles E. Anderson, J. H. Reamer and S. H. Reamer.

**Warren, Mass.**—Work has begun in the old Crossman shop. Edged tools are to be made, and the power is to be derived from the new McDonald water privilege.

### Changes and Improvements.

**Alexandria, Ind.**—Louis H. Gibson is making the plans for the new Kelly ax works, to replace the plant burned a month or so ago. The new factory will be one-third larger than the old, with proportionately increased capacity. The build-

ings will cover an area 540x560 feet, and will be of brick, with the exception of the forge shop, which will be of steel.

**Beaver Falls, Pa.**—The contract has been let by the H. M. Myers Shovel Co. of this place for an additional rolling mill at their plant. This will increase the output of shovels to 450 dozen per day, and give employment to a large number of additional hands.

**Canandaigua, N. Y.**—The Lisk Mfg. Co., in which the McLaughlin Bros. of Batavia and Canandaigua are heavily interested, have on foot a project to establish in Canandaigua a factory for the manufacture of copper, galvanized and granite ware. It is proposed to organize a company with \$100,000 capital, one-third of which is already pledged. The new concern will employ 100 people at the outset.

**Detroit, Mich.**—Architects Donaldson & Meier have made plans for a two-story brick fire-proof building for the storage of patterns, to be erected for the Art Stove Co. in connection with their present plant at the northwest corner of Russell Street and Milwaukee Avenue. It will be 23x33 feet in size, built with hollow walls.

**Ensley, Ala.**—The plant of the Austin-Bryan Plow Co. will be enlarged in a short time and a handle and stock department added to the present manufacturing plant.

**Friendship, N. Y.**—The Corbin Stove Works are building a large addition to their plant.

**Glens Falls, N. Y.**—S. T. Guilford, saw manufacturer, Elm Street, has sold his business to William S. Sprague.

**Middletown, N. Y.**—The Hogan Boiler Works has been purchased by parties formerly connected with the Eagle File Works for \$6000. The new owner will convert it into a file making factory, and the old employees of the Eagle File Co. will be employed.

**New York, N. Y.**—Justice Lawrence of the Supreme Court has granted an order dissolving the Brainerd-Tanner-Gallien Co., dealers in Hardware at 90 Chambers Street, and appointed Henry B. Ketchum permanent receiver, with a bond of \$30,000.

**Phoenix, N. Y.**—The Phoenix Hardware Mfg. Co. have purchased the patterns and business of the Syracuse Curry Comb Mfg. Co., and will thus add to their line another good industry.

### Recent Fires.

**London, England.**—The Vickers-Maxim cartridge factory, at Dartford, has been destroyed by fire. A great stock of shells ready for shipment were totally damaged. The loss is estimated at £30,000. There were no casualties.

**Salem, Ore.**—Perry & Co.'s stove foundry in this city has been destroyed by fire. The building and contents were valued at about \$3000, and were insured for \$1600.

## BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

### New Companies, Agencies, Etc.

Buffalo, N. Y.—The Niagara Pedal Co. has been incorporated, with \$10,000 capital. Directors: Willard Parker and M. H. Wright, Buffalo; and H. A. Smith, Chicago.

Chico, Cal.—D. P. Penick, Broadway, between First and Second Streets

East Orange, N. J.—The National Frame and Metal Co. has been incorporated, with \$60,000 capital, to manufacture frames and other parts of bicycles. Corporators: Charles A. Fox, John S. Kaufman and O. T. Seymour.

Hempstead, L. I.—August Porrier, Main and Franklin Streets.

Millville, Conn.—Nathaniel Reed.

Palo Alto, Cal.—F. A. Dinsmore.

Sacramento, Cal.—The Capital Cycle and Novelty Works, assembling and repairing.

Sebastopol, Cal.—Draper Brothers.

### Changes and Improvements.

Bath, N. Y.—J. Curtis has removed from the Ives block to the Purdy block.

Binghamton, Vt.—The Dimick-Sheldon Mfg. Co. of Newark, N. J., will move here at an early date, and in conjunction with the local W. A. Turner plant, begin the making of sporting goods. The company is capitalized at \$30,000.

Belmont, Mass.—Joseph Quigley has closed for the season.

Bristol, Conn.—A. Munson succeeds Munson & Nearing.

Bellows Falls, Vt.—Lawrence Cannon has sold out his stock of bicycles from the store on Atkinson Street and has gone out of business. His plans for the future are not yet matured.

Blunt, S. D.—Howard Brothers succeed Howard & White Brothers.

Bradshaw, Neb.—J. A. Buckmaster has sold out.

Buffalo, N. Y.—The Finn & Sullivan Co. succeeds Finn & Sullivan.

Campello, Mass.—E. B. Pratt, Main and Chestnut Streets, has closed.

Champaign, Ill.—Nicolet & Co. have removed from 26 North Neil Street to 18 Taylor Street.

Clinton, Ind.—O. O. Craft succeeds Craft & Swinehart.

Colorado, Tex.—Charles H. Townsend has sold out.

Danielson, Conn.—O. Potter has closed for the season.

East Douglas, Mass.—Walter Fairfield has removed to North Street.

Elmira, N. Y.—The Frank E. Bundy Lamp Co. have filed a certificate of dissolution with the Secretary of State. John B. Stanchfield, the Democratic nominee for Governor, was president of the corpora-

tion and a holder of forty-five shares of stock. The other stockholders were Harriet W. Bundy, forty-five shares, and J. W. Bowman, ten shares.

Erie, Pa.—The Pennsylvania Rubber Co. has a new sales manager, Charles F. W. Kelly, who for several years was manager of the B. F. Goodrich Co.'s Detroit branch.

Falls Village, Conn.—David Darling has closed up his bicycle business and returned to his home in White Hollow.

Flint, Mich.—The deal whereby Flint secures the Imperial Wheel Co. of Jackson has been closed.

Grand Rapids, Mich.—The Cycloid Co. have sold out.

Greenwich, Conn.—A. M. Poindexter has entered into partnership with C. J. Ferris.

Hackensack, N. J.—J. Smith has purchased A. W. Fishbough's bicycle business.

Lemoore, Cal.—Clark Henry succeeds Eric Johnson.

Northampton, Mass.—Tidd, Bridges & Co. have gone out of business.

Pittsfield, Mass.—J. Alexander has removed to the Gates Building, Fenn Street.

Plattsburg, N. Y.—Honsinger & Jerry have sold out.

Pomona, Cal.—J. C. Johnson has sold out.

Port Jervis, N. Y.—C. Van Norris of the firm of Norris & Rutan, has bought out the entire interest of P. C. Rutan, and will hereafter conduct the business, and keep in stock a full line of all kinds of sporting goods, etc.

Southington, Conn.—E. W. Hazard succeeds G. W. Smith.

Springfield, Mass.—The Millard & Wilbur Co. (not incorporated) are selling out.

Syracuse, N. Y.—The Bretz Cycle Mfg. Co. have leased from E. C. Stearns & Co. 45,000 square feet of space and power at the Stearns plant on Oneida Street for the manufacture of bicycles. J. S. Bretz, proprietor of the firm, has already a large amount of machinery in place, and will commence operations within a short time.

Toledo, O.—L. H. Bill, long with H. A. Lozier & Co., has engaged with the E. R. Thomas Motor Co., Buffalo.

Upper Alton, Ill.—C. N. Streeper succeeds I. N. Streeper & Son.

Vineland, N. J.—A. L. Aumack has purchased the Ross store, at Sixth and Landis Streets.

Wallingford, Conn.—R. E. Badger & Co. have closed for the season.

Wichita, Kan.—Mausselman Bros., whose stock of bicycles and sporting goods was partly destroyed by fire, have opened again. The stock was fully insured for \$5000.

Worcester, Mass.—Albert Perkins, long superintendent of the Lamb Mfg. Co., has engaged with the Reed & Curtis Machine

Screw Co., and will represent them on the road.

### Recent Embarrassments.

New Britain, Conn.—Doherty & Lavoie have been closed by the sheriff.

New York, N. Y.—Luther H. Porter of East Orange and James M. Gilmour of New York, partners under the firm name of Porter & Gilmour, dealers in and manufacturers of bicycles and sundries at 16 Warren Street, have filed a petition showing the firm's liabilities of \$3,346.63; no assets.

### Recent Fires.

Browns Valley, Minn.—Wm. Redetzke, Elizabeth City, N. C.—Peter Spire; loss small

Florence, S. C.—J. D. Trevathan.

Hartford, Conn.—F. I. Peer's bicycle shop has been damaged by fire.

Ionia, Mich.—Fire in the bicycle store of A. P. Crell & Co. has caused \$1200 damage; fully insured.

Steelton, Pa.—Keller & Mumma, loss \$300.

Wichita, Kan.—Mausselman Bros., North Main Street; insured.

### Recent Burglaries.

East Orange, N. J.—Frederick L. Knapp, 340 Main Street, two bicycles stolen.

### Miscellaneous.

Elmira, N. Y.—The Frank E. Bundy Lamp and Sundry Co. are anxious that it be not confounded with the Frank E. Bundy Lamp Co., whose dissolution has been announced. Each was a separate corporation, and the winding up of the one in no way affects the Lamp and Sundry Co., which will continue as heretofore.

New York, N. Y.—At the adjourned meeting of the directors of the American Bicycle Co. held in the company's offices in the Park Row building, officers were elected for the ensuing year. No change was made in the old board in the executive committee, George F. Crane taking the place left vacant by the death of R. Philip Gormully. Officers are: R. Lindsay Coleman, president; George Pope, vice-president; J. E. Bromley, second vice-president; T. F. Merseles, third vice-president; A. L. Garford, treasurer; C. W. Dickerson, secretary; R. L. Coleman, H. A. Lozier, A. A. Pope and George F. Crane, executive committee.

Pottstown, Pa.—The annual meeting of the stockholders of the Light Cycle Co. has been held at their office, Union and Queen Streets. The election of officers was as follows: President and superintendent, W. I. Grubb; vice-president, J. S. Wagner; secretary and treasurer, E. S. Fretz. The result of the election of directors was as follows: W. I. Grubb, E. S. Fretz, M. A. Mory, H. B. Christian and J. S. Wagner

## Columbian 1000-Shot Air Rifle.

Patented  
Oct.  
24, 1893.

CHAMPION  
MODEL.

This Air Rifle possesses advantages over all the Air Rifles now on the market. The materials used in its construction are the best. The appearance and workmanship is far ahead of any other Air Rifle made. It has an adjustable sight it shoots stronger and more accurate, less liable than any other to get out of order, all parts are interchangeable. We think we have the right to claim this as the "Champion" of all Air Rifles. List, per doz., Framed, \$30.00; Full Nickel, \$42.00.

J. A. Dubuar Mfg. Co.

Northville, Mich.

It is a beauty. It makes a boy feel proud when he becomes the owner of one. It is made in both single-shot and repeaters. If you are a retailer, write us and we will give you the name of jobbers near by you who handle them. If you are a jobber, write us for prices. Anyway, place your order somewhere at once, and get ready for the Fall Trade.

Everybody hates

**"A QUITTER."**

The Jobbers and Dealers know who are the "Quitters" in the bicycle tire business and they know that the makers of

# GOODYEAR TIRES

are finish fighters.

Be on the winning side and handle our tires. There is profit in them.

**THE GOODYEAR TIRE & RUBBER CO., Akron, O.**

## PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

 MADE OF THE FINEST Cold Rolled Steel and Brass. . . .

**NEW YORK STAMPING CO.,**

North Eleventh and Berry Streets,

Brooklyn, New York, U. S. A.

Catalogue on Application.

## Cronk's Patent Fencing Plier and Staple Puller. . .

THIS newly invented fencing tool is needed by all people that build or have occasion to remove or repair wire fence, as it is made with two staple pullers, two hammers and two button cutters. They are the same weight as the 1½ Maydole Hammer and they are made of forged tool steel. No good farmer will be without one. They are warranted to cut No. 8 hard or No. 6 soft wire. Like the celebrated Cronk Plier they are fully warranted in all respects. No. 12, 11 in. long, \$12.00. Dis. \_\_\_\_\_

**CRONK HANGER CO., - - - - ELMIRA, N. Y.**

Why try to stick things with something that doesn't stick? Buy **MAJOR'S CEMENT**; you know it sticks. Nothing breaks away from it. Stick to **MAJOR'S CEMENT**. Buy once, you will buy forever. There is nothing as good; don't believe the substituter.

**MAJOR'S RUBBER and MAJOR'S LEATHER.**  
Two separate cements—the best. Insist on having them.  
ESTABLISHED 1876.  
15 and 25 cents per bottle at all druggists.  
**MAJOR CEMENT CO., NEW YORK CITY.**

## If it is a Food Chopper Without a Lid, Don't Buy It.

A distinguishing and exclusive feature of the STAR FOOD CHOPPER is a plate hinged at the top of the hopper which, when pressed on the food to be cut, forces it upon the feed screw, thus preventing the possibility of injuring or soiling the fingers, which is liable to occur in using the other choppers.

The STAR is unquestionably the best machine of its kind ever offered to the public. It will cut without crushing raw or cooked meat, sea food, fruit, vegetables, etc., into coarse or fine pieces, according to the cutter used, of which three accompany each chopper.

It has eliminated all the objectionable features of other choppers, and has added several improvements that are distinctly its own. It is always in order, and the knives require no sharpening.

No other chopper has the many merits of the STAR. None is more simple in construction or easier to understand or clean. From start to finish in the small points as well as in the large, the STAR FOOD CHOPPER is the best.

**CHAS. D. BROWN, Agent,**

**160-162 Duane Street, New York City.**

We make a specialty of making to order only, a superior quality of Cast Steel Wire Springs, either for extension or compression.

These Springs are all oil tempered and are made of an extra quality of wire drawn specially for our own use, of the same grade of stock as we use for the Springs that we put in our Spring Scales.

## "SIMPLICITY" STUDENT LAMP.

A One Hundred Candle-Power Light for Six Hours' Service One Cent. The illuminant is gasoline, stored in compartments in the lighting fixtures, and on passing through a heating chamber reaches the orifice in the form of gas, which burns with a smokeless flame under a mantle heated to incandescence. The light is not affected by temperature, and will burn equally well in summer or winter. The lamp uses 74° stove gasoline, and is started by heating the burner with a small alcohol torch, supplied with each light. There is no odor like the old gasoline stove.

These lamps have been approved by the Board of Underwriters of Chicago.

Covered by eight patents in the United States and Canada. Ask for catalogue of complete line of lamps and our

# CHATILLON SPRING SCALES.

OUR attention having been called to the fact that inferior makes of Spring Scales are being sold to butchers as "Chatillon" Scales, we deem it due to the trade and to ourselves, in order to protect the merits of our Spring Scales, so well and favorably known for more than sixty years, to inform you that every Spring Scale manufactured by us

has our name as makers plainly on the dial, thus:

and any scale without this name on the dial is NOT A GENUINE CHATILLON SCALE.

## FOSTER BROS.' BUTCHER KNIVES, CLEAVERS, STEELS, ETC.

### BRILLIANT SELF- MAKING GAS LAMP.

Bright as Sunlight and Nearly as Cheap as Daylight.

Everybody can have good light; PURE, STEADY INCANDESCENT.  
BRIGHTER than ELECTRICITY or GAS, CHEAPER and SAFER  
than KEROSENE.

The one reliable lamp that is always right and ready for use, never out  
of order, and will be just as good in 10 years from now.

Portable and convenient. ABSOLUTELY SAFE. Anybody can run  
them. One quart filling gasoline burns 18 hours requiring no attention. No  
wick, smell or smoke.

More Brilliants used than all the others combined. Accepted and  
approved by the Insurance Companies.

Money saved by their use will soon pay first cost.

We are the sole owners and manufacturers of the Brilliant and have made

### AGENCY JOSEPH RODGERS & SONS, LTD.

## THE BEST IS EVER AND ALWAYS CHEAPEST.

The merchant can recommend with confidence.  
The consumer will report superiority.  
Excellence will insure enlarged demand.  
Satisfaction will leave no ground for complaint.

Why, then, sell inferior Cutlery when  
THE VERY BEST  
can be had at a small advance over poorer  
QUALITY?

### FOR CENTURIES THE WORLD RENOWNED HOUSE OF JOSEPH RODGERS & SONS, LTD., SHEFFIELD, ENGLAND,

Has had neither equals nor superiors in the manufacture of

CARVING KNIVES and FORKS,  
TABLE CUTLERY,  
SCISSORS,

RAZORS,  
HUNTING and BOWIE KNIVES  
POCKET CUTLERY, &c.

Its Corporate Mark 

Is among the oldest, and now over 200 YEARS old. It is known the world over as a guarantee  
that all articles so stamped are absolutely superior to all others.

We are the sole agents in the United States for JOSEPH RODGERS & SONS and carry a full line  
of their manufactures in stock.

If you cannot procure goods of their make from your jobber we shall be pleased to supply full  
information on application.

### Give You Your Money's Worth.

Coldwell Lawn Mower Co.,  
Newburgh, N. Y. [Lawn  
Mowers]: We think HARD-  
WARE is enterprising, push-  
ing, up-to-date, so to speak,  
and has a certain amount of  
get-up-and-get spirit about  
it, combined with a certain  
flavor of "I give you your  
money's worth when you  
advertise with us," that we  
like it—not for fun or senti-  
ment, but for real business,  
and so long as you continue  
thusly you can count on our  
continuance.

## WINSLOW'S ANKLE BRACE 1900.

Patented December 17, 1895.

The only perfect Ankle Support made.

Can be attached to any skate.

We desire to call your attention to Winslow's Ankle Brace. It can be attached to any skate. It is made of steel, handsomely nickel plated, with a rib running through the center which strengthens the brace and makes it light, strong and durable. They are trimmed with the best quality Russet Grain Leather.

There have been many attempts at making an Ankle Brace, but this is the only good one ever offered to the public.

Four years have proved it to be a splendid article. Each pair in a box.

PRICE  
75c.  
PER PAIR.

### Winslow's Double Runner Skate.

This skate is especially adapted for children learning to skate, is strapped and ready for use. The runners are so wide apart that a child can stand on them with perfect ease. They are adjustable and can be made from a 6 inch to a 9 inch skate by simply adjusting the thumb screw.

PRICE, 50 cts. PER PAIR.

THE ABOVE SPECIALTIES ARE MANUFACTURED BY

**The Samuel Winslow Skate Manufacturing Company, Worcester, Mass.**

## A BUILDING'S CROWNING GLORY IS ITS ROOF

## P & B RUBEROID ROOFING

Is a "crowning glory" to any building. And it isn't a  
fleeting glory either! It is always *there!* Unlike its tar-  
and-paper or asphaltum imitators, it won't rot out or dry-  
out. Its backbone is the best, strongest felt, specially pre-  
pared to resist weather, water, heat, steam, acids, gases,  
alkalies, etc., and *we can prove* that it will outlast any roof-  
ing made. Extremes of temperature will not affect it. It  
is clean and easily applied, tasteless and odorless. We'd  
like to send you samples.

EVERY

THE STANDARD PAINT COMPANY,  
85-87 John St., NEW YORK.

# HARDWARE

John H. Graham & Co. desire to notify the trade that some irresponsible person having secured some letter-heads of theirs, has used them in ordering goods to be "delivered to bearer" on their account. They caution the trade against this fraud.

The House Committee of the Hardware Club of New York re-opened the Club rooms to the members on Wednesday, November 7th. The repairs to the kitchen and serving room have been far enough advanced to permit of the restaurant being open from 8 A. M. to 4 P. M.

Leonard J. Lomasney has been appointed by the Peerless Rubber Mfg. Co., 16 Warren Street, New York, their general sales agent. Mr. Lomasney is admirably equipped for his advanced position by a business experience acquired during the several years he has been connected with the sales department of this important company.

J. D. Barber, who for thirteen years has been selling cutlery and house-furnishing goods to the trade in New York and Pennsylvania, is now associated with the Bristol Brass and Clock Co., of Bristol, Conn., and will represent them in the silver and lamp departments. Mr. Barber's home address is now 144 Liberty Street, Penn Yan, N. Y.

Allan J. Gray, for the past eight years acting as cashier for the Allerton-Clarke Co., 97 Chambers Street, New York, has recently passed an extremely successful examination and been admitted to the New York Bar. He is now within the boundaries of a field of usefulness in which his well-known industry and love of work cannot but promote his future fortunes and bring some of the rewards due to successful endeavor in this dignified profession.

Sledge & Barkley, Lawrenceville, Va., have largely increased their facilities for doing business by adding to their main building additional storing space of 2,275 square feet, which space they intend to use for storing wagons, nails, tin and corrugated roofing, plows and plow castings, barb wire, wheelbarrows, as well as all such heavy articles as is usually carried in their line. They are extremely desirous of having manufacturers of these additional lines quote them prices, as they are soon to be in the market for the proper filling of this additional space.

The American Tool Chest Co., 200 West Houston Street, New York, have recently issued their catalogue No. 19, which they shall be pleased to mail to those of our readers who are interested in the line of holiday goods for which the company are headquarters. The goods represented in the catalogue are all of first-class material; the well-finished tools are equal if not superior to anything similar on the market, and consequently well adapted for a larger range of holiday requirements than the cheaper lines to which reference was made in the columns of our previous issue.

The Torrent Pump Co., Cleveland, Ohio, has been incorporated under the name of the Torrent Pump and Fence Co., with a capital of \$30,000. The large and successful business they have been doing for some time past has tasked the present capacity of their works to the utmost, and made the prompt shipments needed by the trade a difficult matter. With the new buildings that are contemplated, and the thoroughly complete equipment with the latest perfected forms of machinery, they will undoubtedly be in a position in the early future to satisfy the demands of the trade with greater facility.

The regular monthly meeting of the New England Hardware Dealers' Association will be held at the United States Hotel, Boston, on Wednesday, November 14th, promptly at 5 p. m. At a business meeting which follows immediately after the dinner, the speaker of the evening will be Robert Luce, of Somerville, who will discourse on the subject of "Taxation Problems." A discussion on the subject of Newspaper Advertising will be taken up, and members who have recently advertised in newspapers or magazines are requested to mail a copy of the same to the secretary, or bring a copy to the meeting.

In the advertising columns of our two previous issues, an announcement was made that a River Plate firm in the Argentine Republic, South America, having first-class connections established on the other side, and backed up by a number of years' experience in that particular market, were desirous of obtaining agencies for American goods. They are prepared to give the highest references, and the principals in the business are well-known merchants, and no doubt some satisfactory arrangement might be made by manufacturers desirous of establishing a trade for their wares in that part of South America. Any communication addressed care of *Hardware* for "River Plate" will be gladly forwarded.

The McLaughlin-Martin-Parkhurst Co. has recently been incorporated at Canandaigua, N. Y., with a capital stock of \$100,000. It is their intention to engage in the manufacture of a superior line of tin, galvanized and copper ware; also as dealers in metals and Hardware supplies. The line of goods designated to be manufactured by this company will possess features that render them sufficiently unique in the way of high-grade goods as to meet with but little competition by other manufacturers. They are now erecting a manufacturing plant, and have every reason to believe that by the first of the coming year they will be able to have it in successful operation.

The Inter-State Retail Hardware Dealers' Association have recently issued a handy pamphlet containing the Constitution and By-laws of the Association, together with considerable additional matter that would be apt to influence an outside dealer to urge his State Association to join. It is very evident that by this more complete union of the retail dealers through the several associations much good may be accomplished and reforms instituted. It is replete with the proper arguments to appeal to those merchants who are not already identified with State organizations. It is very evident that a great deal of attention will be given by this Association to the competition of catalogue houses, a subject deserving all the attention that every Hardware dealer can give to it.

The Canton Steel Roofing Co., of Canton, Ohio, refer with great pleasure to the large business they are doing with their patented sheet steel registers. This article being new on the market this season, it is extremely gratifying to find that it has already become popular with the trade who have handled it, and increased sales have naturally been the result. It is certainly a great improvement in this line over cast iron goods, which require a greater degree of weight in the make-up at the expense of a possible lack of artistic expression in the result. The Canton Steel Roofing Co., as their name would imply, do not confine their entire business to the manufacture of sheet steel registers. They make all styles of sheet metal goods for buildings, such as embossed steel ceilings, cornices, skylights, steel roofing, steel sidings, conductor pipe, eaves trough, crestings, etc., in all of which lines they are known as leaders in the business.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade

The office of the Hardware Publishing Company has been removed to Broadway Chambers, Nos. 273-277 Broadway, New York.

## Editorial Trade Review.

At last the agony is over, and the country, relieved for another four years of the strain of a Presidential canvass, draws a long breath and returns to work satisfied with the decision rendered by an intelligent people. General satisfaction over the result is noticeable on every hand, and with present conditions likely to continue, and capital favorably impressed with the myriad of opportunities offering for profitable development, "enterprises of great pith and moment" will be pushed to completion on every hand, to the honor and glory of our beloved country.

Already the quickening impulse of an increased demand is making itself felt in an influx of orders that have been

held in abeyance awaiting results in the political field. In consequence of this lessened weakness in the general market, several lines of goods, quotations on which have been in a hesitating stage for some time, are strengthened considerably and improved prices are the natural result.

When the trade begins to exclaim, upon the relatively low prices obtainable, that "goods offered are too low," and that "at present prices of raw material they cannot be manufactured to sell at the quotations named," it would seem as though the market was in shape for profitable purchases that would not discount the buyers' views when inventory time arrives to show the results of the year's prosperous ventures.

It is commented upon favorably by the trade that while opposition to Trust conditions results in the establishing of a new source of supply on certain lines of goods, promising an opportunity for dealers to turn down the Trust and patronize the new company, it should at once be availed of by the new concern to dispose of their interest to the "combine" influence that called it into existence, and provided a strength and support that made it commercially valuable. Dealers naturally incline to favor a new source of supply, when cupidity seems to be the guiding star of the combined manufacturers, to whom revenue only, and not commercial sentiment, underlies every set of prices agreed upon. But when an added strength is given by their patronage of a newer output, only to find this state of affairs enlarges the importance of putting the plant on the market for a Trust purchase, the trade is discouraged and hand-to-mouth orders at once prevail.

Promising programmes are already entertained for an unusually progressive development of facilities, and an increased effort for an intelligent output, by many leading manufacturers to whom the world only forms a legitimate field for cultivation within the limits of their ambition. The export trade will not be permitted to suffer from any inattention, as long as there are commercial advantages for profitable expansion opening up on every hand. The continuance of the prevailing governmental policies in such recent acquisitions of territories as Porto Rico, Hawaii and the Philippines will prove a magnetic influence for adventurous trading, which, illustrated by recent statistics, is even now being fostered and encouraged in a manner that must be productive of greater importance during the four years commencing with 1901.

It will soon be in order to take into consideration the wants for a Spring trade, which will readily loom up on the horizon of future business. Hardware stocks in jobbers' hands so far have been kept in satisfactory condition to enable such orders to be placed intelligently as to quantities required at an earlier date than has been the custom of recent years. The decision to run no risk this Fall by ordering in excess of present wants has had the beneficial result of averaging up the general stocks, and unless we have a Winter of greater severity than is indicated at present, inventories will show up in any but plethoric quantities, and a large volume of goods will be needed by the confident requirements of dealers who believe in the harbingers of success already recorded by the voters of the nation as promising still greater achievements in the industrial field.

One particular feature is commented upon as referring to the difference in political conditions compared with four years ago; then a depressed business throughout the trade of the country was manifest on every hand; the

four years previous had been full of quicksands, and many concerns came to the end of a stretch of rope that had been pulled on pretty hard. Confidence in the future prosperity of business had been relegated to the wilds of uncertain conjecture, and no man could successfully prognosticate the conditions of the coming season. But the election changed the nature of things to an extent that has continued ever since, and to-day we can look our possible fate full in the face and smile at the prospect, backed up as it is by all ranks of labor, working at increased pay; wages that have filled the vaults of savings banks with deposits aggregating an increase of 33 1-3 per cent.; while the farmers of the West, instead of being such inveterate borrowers that corporations were organized to lend them money on first mortgages of their farms, are now in such a state of health in money matters that they are doubtless prepared to purchase the securities of the foreign countries, who tread on each other's heels to buy their agricultural products at record prices.

### Increased Export Trade with Porto Rico.

The manufacturing and farming interests seem to be about equally benefited by the increased export trade with Porto Rico which has followed the Porto Rican tariff act. That act went into effect May 1, 1900, and the Treasury Bureau of Statistics has just completed the figures covering the five months of our commerce since that act became operative. These figures show that the exports to the island from May 1, 1900, to October 1, 1900, were \$2,754,205, against \$768,802 in the same months of 1897, the last year in which Porto Rico was under the Spanish flag, or nearly four times as much in the five months of 1900 as in the corresponding five months of 1897. All the great classes of manufactures show a marked increase in 1900 as compared with 1897, and so do all the great classes of agricultural products. Agricultural implements increased from \$1,217 in the five months of 1897 to \$3,856 in the same months of 1900; sewing machines increased from \$1,508 to \$3,132; cars and carriages from \$3,344 to \$12,200; builders' Hardware from \$4,335 to \$22,086; furniture from \$3,392 to \$23,220; lumber from \$35,417 to \$65,547; petroleum from \$12,930 to \$65,956, and cotton cloth from \$1,423 to \$406,194. Agricultural products show an equally striking increase. Corn increased from \$357 in the five months of 1897 to \$6,712 in the same months in 1900; butter from \$3,151 to \$5,420; cheese from \$1,062 to \$26,463; bacon from \$6,949 to \$28,431; pork from \$75,829 to \$94,567; lard from \$81,802 to \$201,404, and flour from \$294,278 to \$402,912. There are many other items, both in manufactures and in agricultural products, which show an increase, while the products of the mine also show a marked growth, especially in the case of coal, which increased from \$14,680 to \$26,565.

This remarkable growth in our exports to Porto Rico is especially interesting and somewhat surprising in view of the statements made during the discussions of the Porto Rican act, which indicated that owing to the destruction of crops and property in Porto Rico by the hurricane of August, 1899, the people of that island would have little to sell and practically nothing with which to buy. Yet the imports into the United States from the island have more than doubled in the five months since the act went into effect, as compared with the same months of 1897, and the exports of the island, as already shown, have nearly quadrupled.

A comparison of the growth of exports to Porto Rico in the five months' operations of the new law with the growth in the general exports during the same comparative periods, is especially interesting. The total exports from the United States during the five months from May 1 to October 1, 1900, show an increase of 33 per cent. over the same months of

1897, while the exports to Porto Rico in the five months from May 1 to October 1, 1900, show an increase of 258 per cent. over the corresponding months of 1897.

### The Exported Products of American Workshops.

The American workman is contributing more than a million dollars a day to the export trade of the United States. The products of American workshops exported during the nine months ending with September, 1900, amount in value to \$338,678,243, or considerably more than an average of one million dollars a day for each day, including Sundays and holidays. Counting only working days, the contribution of American workshops and workmen to the export trade of the United States averages a million and a half dollars daily. This grand total of \$338,000,000 of exports of manufactures in the nine months ending with September, 1900, is three times as great as in the corresponding months of 1890, and nearly two and one-half times as great as in the same months of 1895. In 1890 the exports of manufactures in the nine months ending with September, amounted to \$113,899,554; in 1895, they amounted in the corresponding months to \$145,793,884, and in the same months of 1900 they were \$338,678,243. This shows a gain of \$32,000,000 in the five years from 1890 to 1895, and of \$192,000,000 in the five years from 1895 to 1900. Thus the increase in exports of manufactures in the five-year period 1895-1900 is six times as great as during the period 1890-1895.

Every industry contributes to this vast aggregation of American manufactures which bring into the United States from other parts of the world more than a million dollars daily. The various manufactures of iron and steel exported in the nine months ending with September last, brought to the United States \$97,313,060; the refined mineral oil exported during the same period brought \$52,046,134; copper and manufactures thereof, \$46,299,392; wood and manufactures of, \$40,355,547; leather and manufactures of, including boots and shoes, \$19,870,691; manufactures of cotton, \$16,614,906; agricultural implements, \$14,396,787; chemicals, drugs and dyes, \$10,214,414; carriages, cars and other vehicles, \$8,214,681; paraffin and paraffin wax, \$6,024,737; paper and manufactures of, \$5,155,915, and manufactures of tobacco, \$4,348,306; while hundreds of other articles contribute in sums ranging from a million dollars downward.

The following table shows the exportations of principal manufactures in nine months ending with September, 1900, compared with the corresponding nine months of 1895 and 1890:

| Articles.                            | Nine months ending Sept. 30. |                   |                   |

A man in Philadelphia makes a living by selling foreign hotel, express and railroad labels to people that paste them on their baggage to create the impression that they have been abroad.—*Ex.*

## LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law,  
No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 277 Broadway, New York City.

QUESTION.—Some time ago I made a note which fell due about a year ago last month, and before it fell due I gave the same man another note and a mortgage on my house to secure its payment. I have been making payments to this man in installments. I intended the payments to be applied to the note secured by the mortgage, but my creditor has brought suit on both my notes, and he has applied all the payments I have made to the reduction of the first note instead of the one secured by the mortgage. Kindly inform me if I have a right to direct to which debt the money shall be applied, or whether my creditor has the right to apply the money as he chooses.

REPLY.—The debtor has the right to direct the payment of whichever debt he chooses, provided he make this direction before or at the time the payment is made. If, however, he does not make any direction as to the payment of any particular debt the creditor may then apply the payment toward the satisfaction of whichever debt he chooses, which would naturally apply upon an unsecured rather than a secured debt. In the absence of the debtor or creditor making the application of the payment at the time it is made, the court will generally apply the money to the payment or satisfaction of the secured debt or the debt which presses most heavily upon the debtor. If the mortgage was payable in installments, and if you failed to pay, your creditor would have the right to foreclose the mortgage. We think this fact is a sufficient indication of your intention to apply the money to the payment of the secured debt, and we are of the opinion that the court would so direct, in spite of the fact that the unsecured debt was the older of the two.

QUESTION.—I hold a lease of a store by the year. I wish to sell the business, as I have received a very good offer. Can I sell the business and allow the purchaser to occupy the store without the consent of the landlord? If so, can the purchaser hold the premises without a lease for the rest of the year?

REPLY.—You do not need the consent of the landlord in order to allow you to sell your business. Your lease runs between you and your landlord. Your landlord has nothing to do with your prospective purchaser. If there is no provision in your lease whereby you agree not to assign your lease or sub-let without the consent of your landlord you may assign, but the landlord would still have the right to look to you for payment. No other lease than the one which you now hold would be necessary, but to avoid any possible trouble which cannot be foreseen from the facts stated we would advise you to obtain the landlord's consent if possible.

QUESTION.—I have recently sold a small plot of land owned by me in New York. Kindly inform me whether or not a deed must have a revenue stamp upon it, and, if so, what amount. Also, does a bond and mortgage require a stamp, and, if so, what amount?

REPLY.—The war revenue law of 1898 provides that upon every deed of conveyance transferring any interest in real property there must be a revenue stamp. When the consideration or value exceeds \$100 and does not exceed \$500 fifty cents revenue is required, and for each additional \$500 or fractional part thereof fifty cents. Revenue stamps are also required on bonds and mortgages. On mortgages on real estate exceeding \$1000 and not exceeding \$1500 the revenue stamp must be twenty-five cents, and on each additional \$500 or fractional part thereof in excess of \$1500 twenty-five cents. On bonds of this character the revenue is fifty cents.

QUESTION: Kindly inform me how many witnesses are required to make a will valid in New York State. I should

also like to be informed as to whether or not a will affecting real estate in New York and made in Missouri, is governed by the law of New York or Missouri.

REPLY: In New York at least two witnesses are necessary to entitle the will to probate; but we would advise your having three witnesses, as some of the States require three, and it is not unlikely that the testator might own real property in one or more of these States at the time of his death. A will affecting real property in the State of New York must be governed by the laws of the State of New York, irrespective of the State in which the will is made, or where the testator lived at the time.

QUESTION: Some two months ago I sent a man a sample case of goods for inspection and he was also to show the goods and get orders, if possible. We had no arrangement about what was to be done with the goods finally; but the distinct understanding was that they were to be used only as samples, and were not to be considered as part of my customer's stock. I have since learned that the man to whom I sent the samples is on the verge of failure and possibly bankruptcy. Kindly inform me what I should do. The samples are quite valuable, and especially so to me.

REPLY: Your wisest course is to replevin the goods in question. It is quite clear from your statement of facts that you did not sell these goods, and that the title to the goods still remains in you, the goods having been placed in the hands of this man temporarily for a particular purpose. Before you commence an action in replevin upon a claim of this character, you must demand the immediate possession of the goods. If the man had come into possession of the goods wrongfully, this would not be necessary. We would advise you to consult a lawyer at once, and request him to commence suit immediately. Quick action should be taken in matters of this kind, as delay might involve you in litigation and put you to a great deal of trouble and expense to get these goods.

## Manufacturers' Influence on Our Foreign Commerce.

The manufacturers of the United States are rapidly increasing their share in the foreign commerce of the country. Nearly one-half of the importations are now for their use, and more than one-third of the exportations are their products. Their importations during the nine months ending with September, 1900, amounted to \$281,000,000, a daily average of over a million dollars, while their exports of finished manufactures in the same time amounted to \$338,000,000, a daily average of more than a million and a quarter dollars. Never before in the history of the country have the manufacturers imported so much material for use in manufacturing or exported so much of finished manufactures. In the corresponding nine months of last year the importations of manufacturers' materials amounted to \$242,000,000, or \$40,000,000 less than in the nine months just ended, and the exports of manufactures amounted to \$277,000,000, or \$60,000,000 less than in the corresponding months of this year. In the nine months of 1896, ending with September, the importations of manufacturers' materials amounted to \$183,000,000, as against \$281,000,000 in the corresponding months of 1900, and the exports of manufactures amounted to \$184,000,000, as against \$338,000,000 in the corresponding months of 1900. Thus the manufacturers during the four years have increased their importation of materials for use in manufacturing more than 50 per cent., and increased their exportation of finished manufactures more than 80 per cent. Manufacturers' materials a decade ago formed but 33 per cent. of the total importations; now they form over 45 per cent. of the total imports; while finished manufactures, which a decade ago formed but 19 per cent. of the exports, now form over 33 per cent. of the exports.

## WESTERN HARDWARE REFLECTIONS

"Our barrel is always full. Better nail the opportunity," advertises a Hardware dealer. Upon investigation I find the opportunity to be the privilege of any customer to fill his pocket with sundry nails from a barrel in the storeroom. Sometimes there are prizes, and they consist of packages of carpet tacks.

When this paper appears in print, another National election will have been decided, and our merchants and manufacturers settled down to the reality of the situation. While the general business tone has been good up to the time of Election Day, and less hesitation characterized the relations between buyer and seller than has been the wont at such periods, it can't be denied that the falling off in the demand during October was primarily due to the timidity instilled by the pessimists that quadrennially disturb the business public. Upon the result of the election will, therefore, depend a stupendous volume of delayed business, and the orders to be developed in natural channels.

The visitor is at once impressed with the solidity of Pittsburgh's Hardware interests, be they assembled in the merchant's quarters or at the warerooms of the manufacturer. The wholesale interest is immense, and the prestige of the Iron City does not suffer on this score. When the Pittsburgh Hardware dealer claims his city to be the best in the country, his pride is pardonable, for if not the best, it is certainly as good as the best in all the superlative implies. Maybe, one may buy just a little cheaper here than at the other competitive centres, but fact it is, one will find every line complete, everything fresh, new and up to date. The Pittsburgh shipper has a little the better freight rates, and this is certainly a figurable item. And yet, if only trading upon the reputation of the Iron City, offering no further advantages, his opportunities of piling up sales seem always a little more advanced.

My visit to Michigan and other Lake Shore territory proved business to be in a healthy condition, and industrial activity greater than for many years. The great stove manufactories at Detroit had one of the busiest seasons in their history, and, in fact, every iron-working establishment with regular outlets was running to at least normal capacity, and so it was in the lumber market and practically every industry having sought a home in the region of the Great Lakes. True, in traversing the Ohio River valley from Youngstown to Wheeling, the situation was materially changed, some of the plants having shut down for repairs and other causes, thus depriving thousands of steady employment. Then, Ohio River navigators have been in sore straits for two or three months, owing to the protracted ebb, the stage being lower than for a score of years. This not only stopped coal shipments, but paralyzed all other river traffic. But this was a natural cause. Trusts or combines had nothing to do with it. Nor had any other condition. Incalculable temporary loss must have accrued, but there is retrieving. This important auxiliary being practically out of use for ninety days, railroad traffic became naturally congested, and what follows in the wake of such conditions need not be detailed to the business world. This embargo once lifted the Ohio River valley will be ablaze with activity. Even now, under the stress of circumstances, the volume of general business is normal, every day adding increased capacity. The high prices for victuals or country produce in this section are explained by the above conditions. To

charge administration policies with influencing said prices is, therefore, blatant nonsense.

Only a year ago the country traversed by the Wheeling & Lake Erie Railroad, particularly the stretch between New Cumberland and Mingo, with Scio as the radial point, was boiling with oil boom fever, the very skies reflecting the shimmer of a new El Dorado, and now? The forest of derricks rattle as if they were the skeletons of former greatness. The boom is vanished. The glitter is gone, nothing remaining but the memorials and wrecks of the wealth hunters. But, in this very plebeian neighborhood a new industrial life has been developed, with the gain on the side of the fortunate and venturesome. And yet, after all this gusher novelty has worn down to disgust and melancholia, every one hopes for a return boom, especially the supply men who, on such occasions, turn their goods furiously fast at spot cash prices with added profits rather than discounts.

Wheeling, with its trans-river feeders, such as Bellaire, Bridgeport, Martin's Ferry, etc., comprises a section of wonderful industrial development only further enhanced by the unceasing exploitation of the coal deposits in the neighboring mountains, thus bringing the cost of production to the lowest notch. Shipping facilities being regular within a few years, this wealth of manufacturing plants will be strung out for a hundred miles and more, probably forming a nucleus southward in the rich mineral and lumber section of Alabama. Lake harbors will be no inducement when manufacturers can locate in the stretch of territory named, with the cost of production and freightage figured down to an equitable basis. The next decade will produce a great industrial habitation in the river and valley territory demarcated by Youngstown to the north and Birmingham to the south, basing anticipations upon a very low price of fuel. Realization of all this is likely, but accurate forecasts are impossible, for it is already evident that the elements controlling the fuel markets of the Great Lakes are already at work in putting Virginia and Alabama fuel producers competitively *hors de combat*, thus making the question of location immaterial to manufacturers.

Jaws and hearts drop at sight of the coal-decked river. Here's the only stagnation. Too bad the mundane deities are short just now of a "combination" leading to rains and river-rises. But the Pittsburgh iron masters care not, for a low river means an assemblage of industrial forces here. Kentuckians and other river habitants may resort to the El Kohol fuel while the Ohio Neptune is engaged in decreeing sloppy weather and fit coal prices anticipatory of a bad turn in election affairs.

The term "Trust" is only found in the vocabulary of the bombast. Being a monster, it fits the mouth of Mr. Nonentity admirably. A year or two of test and trial has convinced the sane world that Trusts were not of the conception of the anti-Christ moloch or some such biblio-mythological moiety or personage. These great combinations of finance, traffic, industry, trade and commerce have proved a boon to the multitude rather than the chosen few. Isn't there activity galore? Isn't there material evidence of prosperous times? Did America see such a volume of commerce and trade under the old regime of individual strife? Isn't there room for every great live man of business worth and talent? Were opportunities so great, magnified and multiplied and variegated in times of single ownership of industrial plants? Men

of business and professional pursuit, don't get politics and business mixed. Parental issues both, the amalgamation of extraneous elements in course of history has greatly depreciated the value of interdependent and correlative action and fruition, so that at this time a business future cannot be sacrificed to political preferments. A sound commercial condition must stand regardless of artificial conditions and human trickery; no capitalist, unless a fool, could afford to shut down his plants or hinder the progress of industrial life, sound and permanent, or development. Don't let politics dictate your vote. Look about for moral reasons. The majority rules and the Presidential vote will be the test of popular sanity and will force.

J. B. RINDFLEISCH.

### How Circular Saws are Made.

These saws are now made of cast steel specially manufactured for the purpose. An ingot heated to the requisite temperature is reduced to the proper thickness in powerful rolls. The plate is then centred and a circle scribed upon it, after which it is passed to the shearer, who reduces it to a circular form. The centre hole is then bored. It is then handed to the toother, who punches out the teeth around the edge, after which they are rough-filed or ground on an emery wheel, to take off the burr left by punching. The rough saw is now again heated in a large furnace until it is of a bright red color. It is then plunged into a bath of sperm oil, which makes it hard and brittle. The oil is then partly cleaned off, and the rest burned off in a furnace to give the saw the required temper. When cold the saw is hammered on a steel-faced anvil until it is straight. It is next ground between vertical grindstones revolving in opposite directions, and then polished with emery on a large disc. Once more the hammer men take it, and strike it with smooth-faced hammers on an anvil as before until it is absolutely straight and true, and has acquired the proper tension which allows for expansion while the saw is revolving at work. The teeth are now set, alternately right and left, to allow for clearances when sawing timber. They are then sharpened by being filed on the front and tops of the teeth, which operation completes the manufacture.—*American Manufacturer.*

### Business as She Was.

Whether the world is six thousand years old or six millions of years old, it's only a hundred years ago when the field of business enterprise was not only restricted, but the transaction of business within that field was slow and difficult. The merchant usually kept his own books, or, as he would have said, his own accounts. He didn't even dream of a typewriter—either the machine or the girl—but wrote all his letters with a quill, and when they were written let the ink dry or sprinkled it with sand and carefully poured the sand back into the wooden pepper box. There were then no envelopes, no postage stamps, no letter boxes in the street, no collection or delivery of the mail. When the letter was written (and we will own the penmanship and composition would put to the blush the efforts of the present generation), the paper was carefully folded, sealed with wax or a wafer, addressed and carried to the postoffice, where the postage was prepaid at rates which would now seem extortionate. The time required to send letters from New York to Boston was about a week, and there was no way of getting around that, as there was no such thing as a telegraph line, and if any man had been born ahead of his time enough to even suggest the telephone he would have been put into a strait-jacket or taken out and burned as being in league with old Nick. As for the luxury of a decent lead pencil—even that was unknown, although there were things called, by courtesy, lead pencils. The article most in vogue was the leaden "plummet," which some of our old citizens can still recall.—*Graphite.*

### J. D. Warren Mfg. Co.'s "Traveling Salesman."

J. D. Warren Mfg. Co., Masonic Temple, Chicago, Ill., have designed a most excellent method by which information may be obtained regarding the standard designs of Hardware Shelving which they manufacture. As the readers of *Hardware* have had brought to their attention a number of times, this progressive concern are expert designers and manufacturers of Hardware Shelving and special drawers, cabinets and cases intended to meet the particular requirements for displaying or carrying in stock anything handled in the Hardware line. They are enabled to exploit these in a manner interesting and instructive by sending a neatly made box containing a number of leaflets showing this shelving in great variety, and in all the various combinations. These leaflets are printed in colors in a manner that is quite unique, and serve the merchant in selecting an outfit for his establishment far better for the purpose than the ordinary form of catalogue could possibly convey. It enables him to arrange an entire outfit of store shelving, selecting the cabinets, cases and other fittings that he may think suits the style of store, and display of goods to the best advantage. The amount of work that has been necessary to accomplish a result so symmetrical is something that very few can appreciate except those who have had it in hand. It must have required a large amount of time to lay it out properly, and made necessary the skill of some one thoroughly acquainted with the Hardware trade, who would have the necessary patience and energy to cover all the special points, and reach the most satisfactory conclusions. By the aid of these leaflets the company are enabled to show 200 to 300 patterns of designs of drawers, shelving and cabinets. The outfit consists of 60 or more of these leaflets, which are 4½x8 inches in size, and being carefully boxed, can be kept on file, so to speak, for an indefinite period. On the back of each sheet is printed a description of the shelving or cabinets shown, which is certainly of great assistance in making a proper use of the information conveyed. The Warren Co. refer to this outfit as being their "traveling salesman," and in its construction and application it merits that distinctive appellation. Those contemplating making changes in their store facilities would do well to ask for a set of these if they have not already received the same, as they would no doubt be stimulated to make more extensive improvements by their aid than originally contemplated.

### American Trade with China.

American trade with China shows a more rapid growth than that of any of the European countries. The official reports of the Chinese Government for 1899, the details of which have just reached the Treasury Bureau of Statistics, show that the imports into China from the United States in that year amounted to 22,288,745 Haikwan taels (Haikwan tael equals 72 cents), against 17,163,312 taels in 1898, 12,440,302 in 1897, 11,929,853 in 1896, and 5,093,182 taels in 1895. Thus in the four years from 1895 to 1899 the imports into China from the United States have more than quadrupled. During the same period the imports into China from Great Britain increased from 33,960,060 Haikwan taels in 1895, to 40,161,115 in 1899, and from the Continent of Europe (Russia excepted), they increased from 7,552,099 Haikwan taels in 1895, to 10,172,398 in 1899. Thus, while the imports from Great Britain show an increase of 18 per cent. from 1895 to 1899, and those from Europe show an increase of 35 per cent., those from the United States show an increase of 337 per cent. Taking the imports from all parts of the world, the figures for 1895 show a total of 171,696,715 Haikwan taels, and in 1899 264,748,456, or an increase in the entire importation of 54 per cent., against an increase of 337 per cent. in the imports from the United States.

### The Dayton Triple-Gear Ball-Bearing Wringer.

The Dayton Roll and Wringer Co., Dayton, Ohio, find an abundant field for inventive ability in the wringers that they are placing before the Hardware trade at the present time. They have made a number of important improvements, and these have been made to supply certain wants that make the present product about as nearly perfect as it is possible to

vacuum pump draws the saps and juices from the wood, leaving a finely divided cellular structure.

Next, the fireproofing solution is pumped into the chamber, the absorption and saturation being assisted by the partial vacuum. A pressure of from 80 to 200 pounds a square inch is next applied and maintained until the absorption is complete. After draining off the excess solution the wood is withdrawn and thoroughly kiln or air dried, with the result that the interior cellular wood structure is left filled with minute crystals of fireproofing salts.

In a series of tests conducted by fire underwriters small slivers of various varieties of wood were taken from the interior and exterior of treated samples. When held in an alcohol flame the slivers would char and glow as long as the flame was applied, but in all cases, upon the removal of the flame, the glow immediately died out. Combustion was not supported or maintained without the alcohol flame. Samples of one inch sheeting which had been boiled for two hours in water showed a depreciation in fireproof qualities and in some cases would support combustion. A blast torch applied to the surface of a treated sample produced no effect beyond charring where the flame was applied. The charred surface protected the interior portions, and it was with difficulty that the sample was burned to any considerable depth. The same test was applied to samples which had been repeatedly washed and scrubbed on the surface, with little or no difference in the result.

TRIPLE-GEAR BALL-BEARING WRINGER.

make an article of such general utility as the clothes wringer. It will be noticed in the illustration which accompanies this article, which represents their "Triple-gear, Ball-bearing Wringer," the nature of these several improvements. One particular merit is that the cog-wheels are always in mesh, regardless of the distance the rolls may be forced apart by heavy clothes. This arrangement in some patterns of wringers is accompanied by loss of speed, which has been overcome by this company by gearing up the cogs and introducing ball bearings to overcome the additional friction. Another desirable feature is the fact that they have added to their special wringer the Dayton Hand Rest and Clothes Spreader. This is a simple device, which, however, greatly lessens the labor of wringing by affording a place for the operator to rest the hand while holding up the clothes to put them between the rolls, and its outer edge being convex, it naturally spreads the clothes as they pass over it, thus bringing into use the entire length of the roll, and smoothing out the lumps. This

HAND REST AND CLOTHES SPREADER.

is claimed by the manufacturers to be one of the most practical improvements recently introduced in wringers, and it is their intention to use them on all of their high-grade goods.

### Fireproofing Wood.

The practice of fireproofing wood is growing, not only in naval construction but for the better class of buildings, which makes a description of the process of interest. According to a recent article in a New York daily, the process of fireproofing very much resembles embalming. The wood is first relieved of its saps and juices, which are really its blood, and a preservative fluid is injected to take their place. The planks to be fireproofed are put into a sort of boiler or digester. This is closed and steam at a low pressure is run into the digester and the wood parboiled for from one to fifty hours. This is to soften and loosen the dry saps or juices in the fibre. After the steaming process a powerful

### White Enameled Letters.

Many Hardware dealers in extending the assortment of goods desirable for regular sales, have found that White Enameled Letters, being so universally used for window

WHITE ENAMELED LETTERS.

signs, can be handled profitably without a large outlay for stock. The A. V. Taylor Co., who are manufacturing enamelers at 1062 Central Avenue, Cincinnati, Ohio, manufacture these goods largely, and also the Indestructible Steel Signs that are demanded for use as street name plates, for railroad depots, coal carts, transfer wagons, laundry agencies, telephone and telegraph stations, municipal buildings and public institutions, etc.

### New Welding Compound.

A new welding and tempering compound has recently been patented by Melvin C. Dean, Niles, Ohio, who claims an inexpensive compound is provided which will expedite and facilitate tempering and welding, and will also restore burnt steel so that it may be utilized for manufacturing purposes. Furthermore, iron may be welded without being affected by the sulphur in coal or coke, so that an even, smooth weld will be obtained.

The compound is composed of pulverized borax, black oxide of manganese and carbonate of iron, all thoroughly mixed together. The best proportions are found to be at the rate of one pound of borax to four ounces of oxide, and one ounce of carbonate.

The welds are prepared and the compound is applied, after which the second heat is made, and in this heat the compound is absorbed by the steel. For tempering, a dark cherry-red heat is obtained and the compound is applied, which penetrates and is absorbed by the steel, which is then forged. By actual experiment the inventor has demonstrated that springs may be welded as readily as ordinary iron, and that the compound acts as a protector against the sulphur in the coal or coke.—*Exchange*.

### A Good Opening for American Goods in Spain.

From many sources of information we gather the facts that show what an extraordinary change has been effected in Spain's trade conditions in the past two years.

Perhaps the most reliable evidence we have had on this subject is furnished by the thorough and impartial reports from the British Consuls stationed at the different districts in Spain.

The following paragraphs, extracted from the Report of the British Consul at Bilbao, Spain, for the year 1899, will give a general idea of the trend of affairs in that country:

"Since the termination of the late war with the United States, a brisk revival in business has taken place all over Spain. Bilbao, where capital is very abundant, has taken the initiative and is financially interested to a large extent in the most important companies that have been formed lately. As many as sixty-one large companies were registered in 1899 with a capital of 128,000,000 pesetas, of which twenty-three were ship owning, seven banks, eight sugar factories, six electric works, seven mining and metallurgical companies, and ten of different sorts.

\* \* \* \* \*

"During the year 1899 there was an increase in the production of iron ore of about thirty per cent. over that of the previous year. Not only the Bilbao-Santander district shows an increase, but also the rest of Spain, where last year's production represented double the quantity of three years ago.

\* \* \* \* \*

"A new company has been formed for the purpose of erecting dry docks and repairing ships at Sestao, with a capital of 12,000,000 pesetas. The shares, which have only been distributed among ship owners of this locality, are not negotiable for some years to come. (This is to avoid speculation in them.) On the other hand, the question that has been long pending between the proprietors of the ship-building yards 'El Astillero' and the Spanish Government has been settled, and so the facilities for ship-building and repairing will soon be very great, from the fact that three fine docks will be available, as well as several important shops devoted to repairing ships.

\* \* \* \* \*

"The following represents the total shipping at this port in 1899:

| Sail. |        | Steam. |           | Total. |           |
|-------|--------|--------|-----------|--------|-----------|
| No.   | Tons.  | No.    | Tons.     | No.    | Tons.     |
| 510   | 18,075 | 3,868  | 3,043,812 | 4,378  | 3,061,887 |

"The British flag still holds first place at this port with 1,636 vessels of 1,503,538 tons register, but no doubt it will be distanced soon by the Spanish, if the great tendency of the Bilbao people for ship owning continues. During last year as many as sixty-one steam vessels registering 130,295 net tons were acquired by Bilbao business men from British firms. The ships registered at this port measure from 250,000 to 300,000 tons."

Hitherto very little of our manufactures has been sent to Spain, principally for the following reasons:

First, because Spain has never shown such industrial and commercial activity as at the present time.

Second, because until within a few months there has never been direct and regular shipping facilities between New York and Spanish ports.

Third, because European manufacturers send their traveling agents to canvass the Spanish territory or appoint permanent representatives in Spain, who offer local dealers every facility and thus control all their trade.

Now that conditions are so favorable in that market, and that we can reach it advantageously through the regular and direct service recently established by the Spanish Trans-Atlantic Line, the fine and modern steamers of which ply monthly (we understand it will soon be fortnightly) between New York (Pier 10, East River) and Cadiz and Barcelona, we would earnestly recommend American manufacturers to make a serious effort to get a foothold in Spain.

From all indications, it is evident that a very important trade is to be developed between the two countries, which will receive a great impulse as soon as the Commercial Treaty now being considered is completed and ratified. And the first to be on the field with proper connections and efficiently represented will surely reap the fruits of their foresight and enterprise.

In this connection we wish to call the attention of our subscribers to the following paragraphs from the same report of the British Consul at Bilbao before mentioned, the suggestions therein contained being equally applicable to American merchants and manufacturers:

"British commercial travelers are few and far between, whereas German travelers are to be met with in almost every town. The result is that German goods have to a great extent displaced British. British goods are still considered to be superior to German or Spanish, and in many cases would be selected in spite of the greater cost if British merchants would send out their catalogues in the Spanish language and in metrical weights, as is done by German and French houses, who not only do this, but undertake the payment of duties and the delivery of their goods to the purchaser here, or even in the interior of Spain. For this portion of the transaction the assistance of the Custom House and forwarding agent is required, should the firm not possess a local representative.

"It cannot be too often impressed on the British merchants that one traveler, acquainted with the Spanish language, visiting this country, is worth more than tons of beautifully got up price lists and catalogues.

"Those firms who cannot afford to employ travelers would do well to advertise in the Spanish press and send the bulk of their circulars to a local agent here to be distributed to the various firms, etc."

An opportunity offers itself to some enterprising manufacturers to extend their trade to Spain in just such an efficient manner as suggested by the English Consul at Bilbao, without much of the expense and none of the risk and perplexities that such methods as he outlines imply.

A Spanish gentleman, having many and influential relations in both countries, who was brought up among us and trained in American business methods, and who has had considerable experience in commercial pursuits both here and in Spain, is now here making arrangements to take over a select line of American goods which he purposes introducing in that country.

We refer to Antonio Cuyás, who came over as the delegate for the Chamber of Commerce at Madrid to the International Commercial Congress held last year in Philadelphia. He is spoken of in the highest terms by a number of well reputed New York business houses who have known this gentleman for many years and vouch for his honor and integrity.

His plan for the building up of a large trade in Spain in American goods, which has the endorsement of the Madrid Chamber of Commerce and of the Philadelphia Commercial Museum, is in our opinion not only a very practical one, and one that offers many advantages to American manufacturers, but the one that seems to be most adequate to meet the exact requirements of trade conditions in Spain.

One excellent feature of this plan is that manufacturers are not asked to open accounts in a far-away country, as Mr. Cuyás undertakes to pay cash f. o. b. New York for all orders obtained from Spanish dealers. To this effect he has made arrangements with Silva, Bussenius & Co. (a firm established here to continue the commission business of the old firm of J. Aparicio & Co.), by virtue of which they are to act as his agents in this country, forward all orders from him to the respective manufacturers with shipping instructions, and pay the amount of the invoices on presentation to them of shipping documents.

Mr. Cuyás intends returning to Spain about December 1st; meanwhile he can be addressed or seen at the office of his agents, 116 Broad Street, this city.

## Freezing a Customer When He Comes to Town.

Many good accounts are lost to a salesman by the treatment accorded to his customers visiting the house. Too much pains cannot be taken to give a visiting merchant a pleasant reception and warm hospitality when he comes to the city. When a man leaves his business in the hands of some of his clerks and makes a sacrifice of his time and money, too, to go all the way to the city to buy shoes, he feels that he has "something coming" when he arrives. He expects to receive the same hearty welcome he extends to the drummer when that individual visits him. Well, should the drummer be out of town there ought to be some one who will meet this visitor and give him the glad hand, help get his hotel accommodations, fix him up comfortably and entertain him as he deserves. The average country merchant feels just a little timid and overcome by the rush and roar of the city and oftentimes becomes confused and wishes he had never seen the "darned old city." Right then the good offices of the entertainer are welcome. A few little kindly acts will make that man your friend for life.

But just let him fall into the hands of one of these chilly, iceberg fellows who have a temperature of zero always about them, and the stuff's off. Why, here's a little experience one of my customers had when he visited the house:

He came over a thousand miles to buy a spring bill, and by some unlucky combination of circumstances I missed connections and failed to meet him. He came on, however, to the city, and hunted around until he found my house. Arrived there pretty tired and somewhat disgusted with me for failing to meet him, he walked in and met a shock of cool air that would congeal a hot tamale at a breath. The party who met him at the door was one of those high and mighty individuals who had made a little money on the road and owned a few thousands of stock in the company. Did he walk up to my customer and give him a warm hand-clasp and a hearty greeting? Oh, no! he went at it this way: Extending the tips of his clammy fingers, he said: "Ah—your name? Ah, yes; buying some, ah—shoes? What can I show you?" My customer informed him he was just in and was looking around a little and would, perhaps, place a few orders before he left town. Then this frigid zone said: "Well, call around when you are ready to buy, and we'll treat you right. Good-day, by-by."

What do you think of that? Wouldn't it freeze you almost, just to hear me tell it?

What did my customer do? Well, sir, when he recovered from his shock of surprise and indignation, he marched out of the house and down the street, cussing me, my house, the icy individual and everything in general.

He was met by one of those large-hearted, genial shoe drummers, who had been after his business for years. You know the rest: He took that customer of mine into his sample room and sold him a spring bill of over five thousand and immediate shipment of fifteen hundred. I might have had that all to my credit if I had been lucky enough to get in on time, or if some one of average intelligence had greeted my customer on his arrival. Of course, I lost him for a time, but after a few years' patient labor got him back again. When he comes in after shoes now, I accompany him, or else assure myself that he will fall into the right hands at the store.

This salesman recounts the story of many others. Nearly all of them have the same grievance and have lost by the same means some good accounts. Every wholesale house should make one of their strongest features the entertainment and welcoming of visitors. The cost will be trifling, the results great.—*Shoe and Leather Gazette.*

"Mamma!" exclaimed the little fish, "that worm I just sneaked off the hook seemed to be quite sour."

"Well, my dear," replied the mamma fish, "the weather's quite warm and 'the worm will turn,' you know."—*Ex.*

## Krupp Iron and Steel Works.

The annual report of the Chamber of Commerce for the district of Essen contains statements concerning the cast-steel works of Frederick Krupp. These comprise the following: Cast-steel works, at Essen; Krupp steel works, formerly F. Asthower & Co., at Annen, in Westphalia; the Gruson works, at Buckau, near Magdeburg; four blast furnaces at Duisburg, Neuwied, Engers, and Rheinhausen (this latter consists of three furnaces with a capacity for each of 230 tons per twenty-four hours); a foundry at Sayn; four coal mines (Hanover, Saelzer, Neuack and Hannibal), with interest in other coal mines; more than 500 iron mines near Bilbao, in northern Spain; shooting grounds at Meppen, with a length of 10 5-8 miles and a possibility of extension for 15 miles; three ocean steamers, several stone quarries, clay and sand pits, etc. In addition, the firm of Frederick Krupp operates the Ship and Machine Stock Company Germania, at Berlin and Kiel, under contract.

The most important articles of manufacture of the cast-steel works at Essen are cannons (up to the end of 1899, 38,478 had been sold), projectiles, percussion caps, ammunition, etc.; gun barrels, armor plates and armor sheets for all protected parts of men-of-war, as also for fortifications; railroad material, material for shipbuilders, parts of machinery of all kinds, steel and iron plates, rollers, steel for tools and other purposes. The steel works in 1899 operated about 1700 furnaces, forge fires, etc., about 4000 tool and work machines, 132 steam hammers of from 200 pounds to 5000 metric tons force, more than 30 hydraulic presses (among them 2 of 5000 tons each, 1 of 2000 tons, and 1 of 1200 tons pressure), 316 stationary steam boilers, 497 steam engines with an aggregate of 41,213 horse-power, 558 cranes of from 400 to 150,000 tons lifting power. During the last year, the iron mines yielded an aggregate of 1877 tons of ore per day. The coal production from the mines belonging to the Krupp Company (excepting the Hannibal) amounted, on an average, to about 3738 tons for each working day.

The consumption of coal and coke in 1899 was as follows: In the cast-steel works at Essen, 952,365 tons; in the other works and on the steamers of the company, 622,118 tons; in all, in round numbers, 5000 tons per day. The consumption of water at the cast-steel works in 1899 was 15,018,156 cubic meters, which equals about the consumption of the city of Frankfort, with 229,279 inhabitants. The consumption of gas in the steel works at Essen was 18,836,050 cubic meters in 1899.

The electrical power plant of the works at Essen has three machine houses with six distributing stations, and supplies 877 arc lights, 6724 incandescent lamps, and 179 electric motors.

For the traffic of the works, railroad tracks of standard gauge of about 36 miles are laid, which connect with the tracks of the main railroad station at Essen. Sixteen locomotives and 707 cars are operated on the grounds. In addition, there are narrow-gauge tracks of 28 miles, with 26 locomotives and 1209 cars.

The telegraph system of the steel works has 31 stations, with 58 Morse telegraphic instruments and 50 miles circuit. The telephone system has 328 stations, with 335 telephones and a circuit of 200 miles.

On April 1, 1900, the total number of persons employed in the different works was 46,679, viz., 27,462 at Essen, 3475 at the Gruson works of Buckau, 3,450 at the Germania works at Berlin and Kiel, 6164 in the coal mines, and 6128 at the blast furnaces and on the testing grounds at Meppen, etc.

"Karl, I'm actually ashamed to go out with my old hat. It's so out of style!"

"Has the cook the afternoon out to-day?"

"No."

"Then why don't you borrow hers?"—*Unsere Gesellschaft.*

### The American Button Pliers.

The Cronk Hanger Co., Elmira, N. Y., among the numerous popular specialties manufactured by them, are engaged in manufacturing the American Button Pliers, which, while manufactured upon the lines so long known to the trade under the name of the "Button" pattern, are very largely used as a fencing plier, being marketed at a moderate price, which popularizes this particular plier with the entire Hardware trade. They are made from a very good quality of steel, and are thoroughly tested in every respect equally the same as the better grades of goods made by this well-known company. So thoroughly is this the case that they are as fully warranted as a tool of this description should require. They are claimed by the manufacturers to stand as well as any plier on the market, although they are made considerably lighter than many, and in consequence esteemed more highly by the consumer than the old style of goods. The desire of the

AMERICAN BUTTON PLYER.

Cronk Hanger Co. is to market these goods in competition, as far as price is concerned, with the German pliers with which the market has had some experience, and in regard to the quality of which the trade is quite familiar. There is little doubt but what this plier will have a large sale when comparison of quality is considered, as it is certainly a first-class tool of light weight, and of unusual durability, standing any test in competition with any plier on the market.

### A New Paint Factory.

Ground has been broken in Newark, N. J., for an eight-story building plant of the Sherwin-Williams Co., the well known paint and varnish makers. The site for the new buildings is about half way between Jersey City and Newark, easily accessible to the various trolley lines and convenient to New York. It faces the Passaic River, with a frontage of 225 feet. On the opposite shore are the trunk lines of the Pennsylvania, Erie and several other railways, running hundreds of trains a day each way, giving splendid shipping facilities. This move of the Sherwin-Williams Co. has been made necessary by the constantly growing trade in the East. This business is at present handled from the offices and warehouses in Boston and New York City. The manufacturing for these two distributing points has been done at the large Cleveland plant. Inside of six months the Newark factory will take care of this trade, insuring better delivery and widening the field of the company to a great extent. The Sherwin-Williams Co. has factories at present in Cleveland, Chicago and Montreal, having large offices and warehouses at the same points. They also have offices and warehouse at New York, Boston, Toronto, Kansas City and San Francisco. The growth of this company has been greater this year than ever before in their history, and they look forward to even greater gains for next year.

### Ambler Asbestos Air-Cell Coverings.

Ambler Asbestos Air-Cell Covering Co., Ambler, Pa., F. J. Gast, Agent, Havemeyer Building, 26 Cortlandt Street, New York, report having had a most successful year in the introduction of their Asbestos Air-Cell Coverings for hot-air pipes. They were largely introduced last Winter, and thousands of careful householders who covered the furnace pipes in their cellars at that time experienced a gratification that so much comfort could be obtained at such slight expense, and the present season being one in which the excessive price

of coal makes economy desirable, has increased the business in a very extensive manner. It is possible by the aid of this specialty to so economize the heat obtainable from the usual appliances that rooms scarcely comfortable in cold weather can be made to enjoy Summer temperature. At the same time, the cellar, instead of being the warmest part of the house, as is too often the case, is kept remarkably cool, while at the same time the heaters require a lessened consumption of coal. It is usually conceded that more money is thrown away by the wasted heat of the cellar of the average American household than in any other portion of the domestic economy except the kitchen. While the loss in the kitchen is difficult to control, that produced in the cellar by the use of the Ambler Air-Cell Covering on the furnace piping furnishes a much more desirable condition. One advantage about the use of this covering is that when it is deemed advisable to remove from one house to another it can be taken

ASBESTOS AIR-CELL COVERING.

off and taken with one to the new house. It is a great preventive of fires from taking place because of overheated furnace pipes, and in this particular alone it is worth all it costs. One of the most important features of a covering of this kind is that you get so much more heat in the living rooms, where it was previously considered impossible to obtain it. Prices may be had upon application to the agent, F. J. Gast, at the address above given.

In the Sound Money demonstration in Providence on November 3d, the Nicholson File Co. had a very prominent and novel representation in line. A heavy low-gear headed their procession, on which was shown from a high standard four immense files, varying in size from four feet in length, the size of the top one, to ten feet in length, the size of the lowest one. Upon these were placed the figures "1896," "1897," "1898," and "1899," respectively, while a sign underneath stated that they represented the growth of their business under McKinley's term, and that the business would grow 50 per cent. in the next four years if he were re-elected. A wagon followed on which was placed a huge tin dinner-pail some ten feet in height and four feet in diameter, surmounted by an eagle with outspread wings. Underneath this was the legend, "A Republican Dinner-Pail. We want to carry it four years more." This was one of the most novel attractions in the entire parade. Following the wagons marched a body of 650 men, headed by two lines of 30 men each, on each side of the street, bearing a banner 100 feet long and about 3 feet wide. On one side of this was printed, "We have had McKinley's prosperity for four years and like it. We want it for four years more," followed by a jingle which read:

"Our work is sure, our pay is good—  
We want to take no chances;  
So what's the use of risking all  
With Bryan's foolish fancies?"

The jingle on the companion banner ran:

"We want a country safe and strong,  
We want good work for all day long;  
We want sound money for our pay,  
So give us McKinley—take Bryan away."

The banners were lighted by a line of torch-bearers on the side, making a very striking and unique display.

More teams of the company followed the men.

Last year there were imported into the United States over 1,000,000,000 grains of quinine, costing over \$1,500,000.

### A Complete Fishing Tackle Plant.

It comes almost in the nature of a surprise to the Hardware trade that every possible part of the fishing tackle store can be furnished complete from one factory. In the history of the Hardware business this has never been known to be within the range of possibility until the present time. It has always been found necessary to go through a number of establishments devoted to the different branches of the business in order to obtain what might be considered a complete line of fishing tackle. At the present time the factory of the Enterprise Mfg. Co., of Akron, Ohio, supplies this wonder in the way of achievement, and as will be noticed by any one in the Hardware trade desirous of adding this line, or of increasing it in their present stock, the most complete assortment possible of fishing tackle and other appliances pertaining thereto will be found in their wonderful catalogue. This business has grown from what might be considered a small beginning to the most extensive known to this particular branch of the trade. We give an illustration herewith of their present factory to justify this statement. Their original premises are indicated in the extreme corner of this illustration, showing the dimensions of their plant at the

furnished lines, etc., that would be considered necessary to stock the smallest or the largest establishment for the sale of fishing tackle in any part of the world. One great advantage is that the Enterprise Mfg. Co. are exclusive manufacturers of so many special lines that they are in a position to give the trade quotations and terms that would prove exceedingly interesting. The retail dealer who desires to be up to date in this particular line should ask for "Enterprise" goods, for those who are handling them admit that the popularity they have achieved is owing entirely to the care and attention paid to their manufacture, and the merit underlying the articles coming from this extensive establishment.

### New Steel Making Process.

H. B. Depoy, Indianapolis, Ind., has invented a process, after thirty-two years of study and experiments, that will revolutionize the manufacture of steel, if the opinions of an exchange writer are to be accepted. With the new process, the inventor says, any piece of steel may have its tensile strength increased from forty to seventy-five per cent. It can be made so hard that no tool will scratch it, and only a diamond can be used to cut it. Yet it cannot be broken or

ENTERPRISE MFG. CO'S. PLANT, AKRON, OHIO.

time of inaugurating the business in 1880. In this extensive factory they make everything in the line except rods and plain lines, and they anticipate before many seasons have passed that these also will be added to their present assortment. It is certainly the intention of this progressive concern that every season that passes shall find them in better shape than ever to take care of the wants of their patrons. They are constantly adding new machinery and installing other facilities tending to make this condition possible. Their Fish Hook department, which has been so greatly augmented by the purchase of the business of the American Fish Hook Co., of New Haven, Conn., enables them to give special attention to this particular line, and produce an article of recognized merit that will add greatly to their prestige. Their Fishing Reel department is one in which they take the greatest pride, and this attention to so important a branch is well deserved, for it is beyond doubt the largest and best equipped plant of the kind in the world, as the handsome array given in their latest catalogue previously referred to will fully indicate. One of the most important features of their manufacture is that of "Luminous Baits," as that particular branch of the fishing tackle business is called. In addition to these staple lines, their line of specialties embraces everything in the way of spoons, snells, flies, leaders, sinkers, floats,

cracked by impact. The harder the steel is made the greater and more dense its tensile strength becomes. Railroad men say that, according to his representations, Depoy has discovered the very thing that railroads have been searching for in vain for years—a process by which steel rails can be hardened to resist the wear and tear of heavy trains without becoming so brittle as to crack easily. He will be given every opportunity to make practical tests of his process, and will be aided by the railroads in his experiments. A piece of cast iron, Mr. Depoy says, may be welded as easily and securely after treatment in this solution as the best Norway or Sweden wrought iron, and any tool formed from cast iron by the regular casting process may be tempered so that it will carry an edge superior to the steel now manufactured by the best known processes. This means, he says, that tools that must have the keenest edge and the greatest tensile strength can be manufactured after having been cast from the cheapest iron on the market.—*Exchange*.

Patent Medicine Proprietor—Here's a recommend for our medicine from a life insurance president.

Junior Partner—Good! What does he say?

Proprietor—Says fewer of his policy holders die from taking our medicine than any other.—*Ex.*

## Value of Expositions.

Among the objects which attracted the attention of a well known Wisconsin manufacturer at the Centennial Exposition at Philadelphia in 1876 was a steam hammer of a particular make. In 1896—twenty years later—he found occasion to use a steam hammer, and, remembering the name of the eastern manufacturer of the one that he had seen, sent for the machine and set it up, finding, as he had expected, that it was a great convenience. His business has since increased, and he has purchased two more steam hammers from the firm that sold him the first. The cost of the hammers was \$700 apiece. Here, then, were three sales, amounting to \$2,100, effected as a result of an exhibit, twenty years and more after the close of the Exposition at which the exhibit was made—and no doubt the exhibit brought a great many earlier profitable returns. It certainly pays every manufacturer to exert himself to secure wide publicity for the merits of his products. Newspaper advertising is one avenue to publicity. Exhibiting at expositions is another. Both are good, and neither will be habitually neglected by enterprising men.

The Wisconsin manufacturer of whom the above incident is related is one of the business men of that State who thoroughly appreciate the advertising opportunities offered by the forthcoming Pan-American Exposition at Buffalo, N. Y. The State of Wisconsin has shown its appreciation of this opportunity in a practical way by appointing a Board of Commissioners and appropriating \$25,000 for defraying the expense of the representation of Wisconsin manufacturing interests at the Pan-American.

Another State which is wide awake to the opportunities offered by the great Exposition next Summer at Buffalo is California. Speaking of the success of the United States exhibit at the Paris Exposition, and especially of that from the State of California, the *Los Angeles Times* says: "The success thus achieved by the United States at the great Paris show is worth untold millions of dollars to this country as an advertisement of what we can do. Thousands upon thousands of consumers will for the first time have their attention drawn to the superiority of American goods and every branch of industry will profit, from the orchards of California to the machine shops of Pennsylvania. Our own home section of California is a striking example of what may be accomplished along this line. In this connection it should not be forgotten that there will soon be held in this country the most important Exposition that there has been in America since the Chicago World's Fair in 1893. It is the Pan-American Exposition at Buffalo, and it is unique in this, that it is especially devoted to the Western Hemisphere—to that great field of the two Americas extending from the North Pole to Cape Horn. This Exposition will attract thousands of consumers from Europe and other parts of the world whose appetite for American products has been whetted by what they have seen at Paris, or what they have read about our displays there. Let each public-spirited business man see that southern California is worthily represented at the Buffalo show. We know from experience that the money so expended will be returned to us a hundredfold."

The fruit exhibit of the State of California, and especially from the southern end of the State, will be a very notable feature of the horticultural display at the Pan-American.

The number of pounds of coffee imported by the United States during the year ending with June 30, 1900, was 787,983,611, at an average valuation of nearly 6.66 cents per pound, or the total sum of \$52,466,993. In the fiscal year 1899 the number of pounds imported was 831,827,063, valued at \$55,275,470, an average price per pound of a little more than 6.64 cents. The importations in 1898 aggregated 870,514,455 pounds, with a valuation of \$65,067,631, or an average of a little more than 7.48 cents per pound.

## Much in Little.

"He that contemneth small things shall fall by little and little."

It is much easier to be honest to the cent than to be honest to the dollar.

The man who is really jealous of his credit cannot afford to forget or ignore this fact.

If the street car conductor passes without collecting your fare you can probably save a five cent fare, and not injure your credit with any other man, but you must acknowledge having injured it with God and yourself.

Petty meanness is too common. There are men who actually pride themselves on saving all they can by taking from some one else in sums from a postage stamp up, sufficient to make them feel justified in selling themselves for the aggregate amount thus saved in a year.

In order to make any gain to speak of, he must have a good many people on his list.

If in some cases he simply left the revenue stamp off his check, nothing is said about it, but the man who receives his check will not forget it—he pays for it.

If he delays paying his bill until the time for discount has passed or interest has accrued, if he remits a personal check for the face of the bill, he may have it returned to him, and may count it good luck if he does, for if he does not he should know that a small amount is carried to the debit side of profit and loss account on the books of his creditor, and the credit on the ledger page against his name will always be there as a reminder.

If in his next purchase he finds prices or discounts less favorable, or any article with an open price more expensive than he anticipated, it may not occur to him that he is paying up for his petty meanness. He may not know that he gets no credit for it. He does not realize that the \$10 saved in interest, discount or exchange may have cost him \$15 in the price for good.

He may be ignorant of the fact that his habit is a matter of current report among his creditors, or, in other words, "they are on to him"—they know him better than he knows himself.

The peculiarities of men are known to those who grant them credit, and however well he may be treated by the salesman, the house will not always lose by reason of unauthorized deductions.

Wholesale dealers are just as shrewd as their customers. They are in touch with their business practices, even though they are personal strangers.

Long experience in reading character is just as valuable to the wholesaler as it is to the retailer, to the teacher or the lawyer, and actually determines the policy, as well as the price and terms, in many cases. It has as much influence under the head of "moral risk" as does capital or property in making up the credit rating of buyers of goods.

There are no degrees of honesty. An honest man will do right.

Settle a bill in full when it is due, according to its terms; receive a receipt in full with a kind "Thank you," and there is no bad taste left in one's mouth. The good feeling, the credit gained, the consciousness of having done right, are worth value received.—LINDELL PLANTERS.

Hix—I guess your friend Meeks is coming out on top, after all.

Dix—How so?

Hix—I saw him purchase a bottle of hair restorer in a drug store the other day.—*Ex.*

✻

"No, Harry, I am sure we could not be happy together; you know I always want my own way in everything." "But, darling, you could go on wanting it after we were married."—*Ex.*

## RECENT TRADE PUBLICATIONS.

**BARNES TOOL Co.**, New Haven, Conn. Pamphlet catalogue, devoted to their line of manufactures, under the head of Tools and Machines; including in its contents three-wheel pipe cutters, pipe wrenches, special tongs, bicycle wrenches, hand and foot-power sawing machines, band and jig saws and power miter cutting machines.

**WHEELING CORRUGATING Co.**, Wheeling, W. Va. Small size pamphlet catalogue, 42 pages, No. 175, intended for general distribution, and covering their line of products, such as tin plates, black sheets, galvanized sheets, eaves troughs, conductor pipes, steel, tin and metal roofings, finely printed on good paper, well illustrated, replete with information considering the size of the catalogue, giving measurements, weights to the square foot and gauges of the entire product mentioned above, making a very handy little manual to have at hand by dealers handling this class of product.

**GERMANTOWN TOOL WORKS**, Germantown, Philadelphia, Pa. Catalogue of 94 pages, with extremely handsome embossed cover in colors and bronze presenting a very attractive appearance. This catalogue embraces their large line of carpenters', blacksmiths', tinnerns' and engineers' hammers of every size; machinists', coopers' and horseshoe hammers, prospecting picks, mill picks, and other similar tools. Included in its contents is a large line of hatchets made under this well known brand so popular with the trade, including the usual lines of shingling, lathing and claw hatchets, and also produce dealers' and barrel hatchets. These various styles of hatchets are shown by full size cuts, handsomely engraved, and the finish is indicated by the various colored bronzes with which the goods themselves are finished, making it one of the most attractive catalogues of the kind that has been brought to the attention of the Hardware trade. In addition to the goods already referred to, the following are also represented: Blacksmiths' cold and track chisels, napping hammers, hand drilling or stone cutters' hammers, blacksmiths' sledges, masons' hammers, double face stone and bush hammers, striking mauls, etc., etc.

**LOGAN & STROBRIDGE IRON Co.**, New Brighton, Pa. Pamphlet catalogue of 96 pages, covering the important line of specialties manufactured by this concern in the housefurnishing and builders' Hardware line. Embraced in its contents will be found the fine line of coffee mills which have been sold to the Hardware trade for a number of years, and with which the name of this concern is favorably identified; also a large and important line of hammers, including nail, tack, upholsterers' and shoe hammers; lemon squeezers, ice hatchets, ice shredders, shaves and planes; hatchets and chisels, garden tools, weeding forks and floral sets. This company are large manufacturers of cast iron specialties, including such goods as bird cage and clothes line hooks, pliers and pincers, lamp brackets, gem pans, waffle irons, etc. This assortment is an extremely complete one, and covers almost every description of this class of goods sold by the Hardware trade. They are also large manufacturers of cast iron toys, their assortment being in all probability the most complete within reach. This is too important a catalogue for the up-to-date Hardwareman to be without, and he should send for one.

**TERRE HAUTE SHOVEL & TOOL Co.**, Terre Haute, Ind. Illustrated catalogue and price list for 1900-1901, covering their line of shovels, spades, scoops and ditching tools of all kinds. They refer to the fact of having improved their facilities very materially, and having substituted a full line of

hollow-back shovels, spades and scoops for the line of axes formerly made, so that they are now able to supply their customers with three varieties of shovels, viz.: Plain back, riveted or back strap, and hollow back or "Cleveland," making their line now an exceedingly complete one, and well worthy of the attention of the trade. The catalogue is a small oblong of 94 pages, and in addition to the goods being fully illustrated and described, each article has a catalogue number by which it may be ordered, and in the back part of the catalogue dimensions are given on all the shovels, spades and scoops made by the company, so that comparisons with other makes can be more readily made and differences ascertained.

**SKINNER CHUCK Co.**, New Britain, Conn., New York office, 94 Reade Street. Pamphlet catalogue of 50 pages, covering their important line of lathe chucks, drill chucks, planer chucks and face-plate jaws. This concern has been before the Hardware trade a number of years, having been incorporated in 1887, and their line of goods is well known to the trade for quality and up-to-date improvements. Since the publication of their previous catalogue in 1898 a line of lathe face-plates with adjustable jaws has been added, and a number of important improvements made in their regular patterns of lathe chucks, which the company believe will be appreciated by their customers in the trade. The catalogue is handsomely illustrated with good wood-cuts, in which all the parts are well described, the descriptions being readily understood and the cuts equally as clear.

**ARCADE FILE WORKS**, Anderson, Ind.; 97 Chambers Street, New York, and 118 Lake Street, Chicago, Ill. 20-page pamphlet catalogue, oblong in shape, printed in good style on excellent paper and handsomely illustrated throughout. It is designed to call attention to the fact that the Arcade files are made under patents owned by this company, and which give a tooth equal in importance to that of a hand-cut file. Attention is called also to their new Improved "Increment" Cut, whereby the spacing is made irregular, the teeth not following each other on a regular line, but having a wavy appearance. It is on the strength of this booklet, original with the Arcade File Works, that their claims are made and largely advertised that "the Arcade Files will cut faster and wear longer than any other file on the market." In connection with the manufacture of the Arcade File, attention is called to the fact that by the use of natural gas (which can be more easily regulated than any other method of heating), and the high grade crucible steel made especially for the purpose, the result produces a more uniform heat, insuring a perfect temper. Embraced in its contents the standard lists are given, together with the list of "extras," covering all the various patterns of files that are made; illustrations showing the standard cuts, as well as full length cuts of files and rasps showing their various points by which they are known to the trade.

**JOSEPH DIXON CRUCIBLE Co.**, Jersey City, N. J. Booklet on "Graphite for Automobiles," written in the usually interesting manner of all the advertising matter emanating from this well-known concern, their leading article, under the head of "What Is Graphite?" being full of interest and information; the various forms in which graphite is put up for the purpose indicated being shown in the pages following. They also issue, on folded cardboard, illustrated by its application for bridge work, an exhaustive commendation of Dixon's Silica Graphite Paint, which is largely used for steel viaducts, bridges and large buildings.

## NEW GOODS AND SPECIALTIES.

### "Yankee" Pocket Magazine Screw Driver.

North Bros. Mfg. Co., Philadelphia, Pa., are placing before the Hardware trade the "Yankee" Pocket Magazine Screw Driver No. 60, which we illustrate herewith. This is a tool the need and usefulness of which will be instantly recognized. It is claimed to be so nearly unique that nothing just like it to which it can be compared is handled by the trade at the present time. It is made with four detachable blades

"YANKEE" POCKET MAGAZINE SCREW DRIVER.

of varying widths and thicknesses, designed to suit different sizes of screws, from the smallest to the largest. The magazine is formed by the handle, in which the blades are securely kept. The tool is small and convenient, can be carried in the pocket without much trouble, as it measures when closed only three inches in length by five-eighths of an inch in diameter, and weighs only two ounces. The illustration shows the tool in its actual size. It is made of steel, handsomely polished and fully nickel-plated, is packed in strong paper boxes containing one dozen, and should form a very desirable specialty for the Hardware trade to handle.

### "Dandy" Green Bone Cutter.

The Stratton Mfg. Co., Erie, Pa., are manufacturing the "Dandy" Green Bone Cutter, which they make in a number of sizes. The one we illustrate herewith is a geared cutter, the lowest priced one manufactured by this company. The bone is cut across the grain, and it will cut green bone so fine, it is claimed by the manufacturers, that it may be fed to chickens four days old. After the bone is cut, it is retained in a disk, which prevents its falling about. When it

"DANDY" GREEN BONE CUTTER.

becomes full, it is readily removed by simply turning a button and removing the cover. The feed is automatic by a pawl and ratchet, thus freeing the operator from any further care other than turning the crank, and is adjustable so that it can in a moment be changed from a cut fine to medium or coarse. It is strong, durable, and well constructed, all parts easily accessible for the purpose of cleaning. The knives are claimed by the manufacturers to be made of the best tool steel, and finely tempered. The catalogue covering the entire line of

bone cutters manufactured by this company will be furnished upon application. As this line of goods can be safely handled by the Hardware trade in one or more varieties, it is worthy of the attention of the progressive dealers who desire to be up to date.

### "O. K." Rotary Washer.

The H. F. Brammer Mfg. Co., Davenport, Iowa, are the manufacturers of the "O. K." Rotary Washing Machine which

"O. K." ROTARY WASHER.

we illustrate in the accompanying cut. The tub is constructed of the best material possible to be used in this connection, and the sides and the inside bottom are provided with corrugations similar to those of a washboard. The block or stirrer, together with the pins, are made from hard wood, so that there is nothing metallic that presents itself that could rust or spoil the clothes. This washer has a revolving steel gearing, which greatly reduces the friction, and also insures an easy operation that is almost noiseless. The wheel turns either to the right or left. The pinwheel or dasher revolves automatically, and turns the clothes back and forth through the soapsuds without any unnecessary and possibly destructive rubbing. The lid on the top is so constructed that it closes in a very tight manner. Consequently there is no escape of steam and the accompanying odor of soapsuds and soiled linen throughout the house. The company are desirous of appointing agents for the sale of this machine in unoccupied territory, and invite correspondence on the subject.

### Adjustable Nut Crack.

W. H. Edwards & Co., Rockford, Ill., are placing before

ADJUSTABLE NUT CRACK.

the Hardware trade an exceedingly popular and seasonable article in the shape of an Adjustable Nut Crack. We illustrate the same in this article, and it is claimed to be the most powerful nut crack for its size that a combination of mechanical principles can produce. By reference to the accompanying illustration it will be seen that the jaw is movable and can be readily adjusted either toward or from the stationary jaws, in order to vary the size of the opening between them, so that nuts both large and small may be readily

cracked. The leverage is always the same, no matter how the jaws may be adjusted. The operator may hold his hand over the nut crack while cracking the nut without danger of pinching his fingers, and also prevent the scattering of shells over the floor. It is made of malleable iron, finely nickel-plated, japanned or tinned. It is packed in boxes of one dozen each, or the manufacturer will furnish single samples on the receipt of 30 cents, so that the crack may be examined before being ordered in customary quantities. It is also recommended for its utility as a pipe-wrench, for repairing gasoline stoves, or for holding bolts that turn when a nut is being tightened. The nature of its construction will readily suggest numerous operations for which a tool of this description can be utilized.

**Globe Air Rifle.**

The J. A. Dubuar Mfg. Co., Northville, Mich., have recently perfected the new Globe Air Rifle, which they are

GLOBE AIR RIFLE.

marketing through the Hardware and sporting goods trade at the present time. This is of the latest construction, style and equipment, and is in every respect a twentieth century gun. It is a model of 1900 pattern, finely finished, nickel-plated wherever possible, and, in, fact, extremely handsome and gunlike in appearance. The magazine of the repeater is designed to hold 300 BB shot. No rifle leaves the factory without being accurately tested and sighted, it having a sight feed, and repeats from the muzzle, making it shoot strong even as a single shot. In its construction the stock is manufactured of the best selected hard wood, and finished in the natural color of the wood used, or in walnut, as ordered. This 1900 model is provided with a new locking device by the aid of which the gun is prevented from any rattling, or from breaking down when it is shaken. If desired, the repeater can be used as a single shot, as the single shot is the same as the repeater, but unprovided with a repeating attachment. It is a very desirable article for the holiday trade, and should prove a good seller for whoever handles it.

**Eureka Skate Sharpener.**

The Smith & Hemenway Co., 296 Broadway, New York, are placing upon the market what may be considered a sea-

EUREKA SKATE SHARPENER.

sonable article that will be essential in the Hardware stock in the Fall and Winter. It is the Eureka Skate Sharpener No. 149, being one of the popular specialties handled by this enterprising and progressive company. It is claimed to be one of the simplest, most quickly adjusted, and accurate skate sharpeners now on the market. Among the points of superiority mentioned by the makers is the fact that it is automatic in adjustment and will readily sharpen any skate, whether the runners are flat or convex. The file is cut on all four sides, two being flat and two convex. It is constructed with skill from the best quality of steel and finely nickel-plated. The trade would not make a mistake by hav-

ing some of these included among their orders for other goods.

**Sommers Improved Corkscrew.**

Charles Adolf Wolff, 32-34 Park Place, New York, is the sole agent for the sale of the corkscrews manufactured by W. Sommers, Schmalkalden, Germany, which include corkscrews, screw drivers, champagne nippers, champagne hooks,

SOMMERS IMPROVED CORKSCREW.

etc., running from the lowest priced to the most expensive styles. One of the latest and most popular corkscrews that has been brought to the attention of the Hardware trade is the one presented herewith. Among the principal advantages claimed by the manufacturer is that its construction enables it to fit all bottles, which is not always the case with a number of other styles. Scarcely any experience is required, as by simply turning the corkscrew the cork is withdrawn, and a simple twist readily removes the cork from the screw. The catalogue covering this line of goods can be had for the asking.

**Mather Thousand Mile Axle Oil.**

The Commercial Oil Co., Cleveland, O., are placing upon the market the Mather Thousand Mile Axle Oil, the advertisement referring to which will be found on page 67. The necessity for a good oil of this description has been apparent for some time past, arising from the fact of the great improvements that have been made in the patent axles handled by the Hardware trade. Instead of the old style of Half Patent axle, the trade now demand either a "Thousand

MATHER THOUSAND MILE AXLE OIL.

Mile," "Long Distance," Felt Pad, Roller or Ball-Bearing Axle, and all enterprising and progressive carriage manufacturers are at the present time using one or the other of these descriptions of axles. The Hardware houses carry them in stock in order to supply the demand, and it becomes essential that a good oil suitable for the lubrication of these goods should also form a part of a stock. It is necessary that the oil should be one that will not gum, will not run in warm weather or get stiff in cold weather, and all these requirements are fulfilled by the Mather Thousand Mile Axle Oil, manufactured by the Commercial Oil Co. This oil had an extremely successful season during 1899, when 80,000 two-ounce

cans were sent out under the auspices of the carriage manufacturers of the country, who realized the importance of starting the purchaser of a vehicle with a sample of an oil that would give satisfaction. The oil has proved an exceedingly popular specialty to handle in connection with carriage goods, and is put up in pint, quart and gallon cans.

#### Adjustable Safety Window Guard.

The United States Electro-Galvanizing Co., 346 Broadway, New York, are placing upon the market and introducing the

ADJUSTABLE SAFETY WINDOW GUARD.

same through the Hardware trade, the useful window guard which is shown herewith. It is made in three sizes, having three, four and five bars; finished with galvanized coating, and may be adjusted to fit any window. The expansion of curve from the windows is equal to 8 inches. When necessary, the guard can be folded up at one side, so as to leave the window opening free and unobstructed. In addition to preventing children from falling out of the window, it is valuable also as a protection to a person washing windows on the outside; also to display flower pots in a convenient and safe manner. The manufacturers dwell upon the fact that the guard is not only strong, but simple, inexpensive and attractive in appearance.

#### Rotary Screw Ventilators.

E. G. Washburne & Co., 46 Cortlandt Street, New York, are manufacturing the Self-Lubricating Rotary Screw Ven-

ROTARY SCREW VENTILATOR.

tilators, which we present in the accompanying illustration. It is made of galvanized iron and painted, and consists of a head, cylinder and propeller. The head, revolving on a spindle to which the propeller is attached, works noiselessly within self-lubricating oil cups. By the rotation of the head and propeller, which is in the cylinder, the air in the flue (on the top of which the ventilator is placed) is lifted up and forced out of the flue, producing a partial vacuum below,

which can only be supplied from beneath, whereby an upward current is more certainly maintained. This being a purely mechanical power, its action is in no degree dependent on temperature or any other modification of the atmosphere; and at whatever time the wind suffices to rotate the ventilator, its freedom from friction rendering the slightest breeze operative, the exhausting action of the propeller is inevitable. It is claimed by the manufacturers that for all large buildings, houses, churches, factories and breweries, it is the only sure cure for a smoky chimney. These are made in a number of sizes of diameter of cylinder, running from 6 inches up to 42 inches. The manufacturers are also largely engaged in the sale of copper weather vanes, finials, etc., and copper lightning rods.

#### Favorite Mop Holder.

The Arcade Mfg. Co., Freeport, Ill., are manufacturing the Favorite Mop Holder, an illustration of which we give in this column. It presents new and novel features that make it well worthy of acceptance by the trade. The mop head or holder has a spring adjustment, which is made by

FAVORITE MOP HOLDER.

raising the ring that lies against the handle and pushing it forward. As shown by the dotted lines in the illustration, this opens the clasp. The mop cloth can then be inserted, and by pushing the ring back to its original position it becomes securely fastened. The holder is referred to as being manufactured of the best material, and is distributed by the manufacturers with either hard or soft wood handles, which may be obtained plain or stained as to finish. It is fully warranted by the manufacturers for the purpose for which it is intended.

Wall paper does not hang, and yet the person whose business it is to paste it up is called a paper hanger. The reason is simple. Long before the introduction of wall paper, Arras, a town in France, was famous for tapestries called "Arras." These were used as wall coverings, and the men who were employed to put them up were called "hangers." When paper succeeded tapestry as a mural decoration the name "hangers" stuck to the men, though instead of being tapestry hangers they are now paper hangers.—*Ironmongers Chronicle*.

BOSTON.

# REVIEW OF THE MARKETS.

**Hardware:** The general demand shows much greater activity since the election. That it will be of continued improvement admits of no doubt. Many contracts have been held up by conservative buyers that will now be given out, and progress will be reported on a number of deals for supplies, which will be needed on improvements in contemplation for several months that will now be pushed toward completion.

**Wire Nails:** A much better demand is reported, as stocks have been held in a very light condition, large orders having been the exception instead of the rule. No immediate changes are anticipated by the trade, and stocks will be carried in limited supply, necessitating more frequent replenishing. Quotations are as follows, f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in 10 days:

|                              |        |
|------------------------------|--------|
| To jobbers in carload lots   | \$2.20 |
| "    less than carload lots  | 2.25   |
| To retailers in carload lots | 2.30   |
| "    less than carload lots  | 2.40   |

New York prices continue without change, being well sustained. Quotations remain as follows:

|                                     |                |
|-------------------------------------|----------------|
| To retailers, carload lots on dock  | \$2.48         |
| "    less than carload lots on dock | 2.55           |
| Small lots from store               | \$2.60 to 2.65 |

**Cut Nails:** The Cut Nail market is held in steady condition, at firm prices, and fair demand. The following quotations represent the market, f. o. b. Pittsburgh, terms 60 days, 2 per cent. off in 10 days:

|                                        |        |
|----------------------------------------|--------|
| Carload lots                           | \$1.95 |
| To jobbers in less than carload lots   | 2.00   |
| To retailers in less than carload lots | 2.10   |

New York quotations are as previously reported with a satisfactory movement:

|                                                |                |
|------------------------------------------------|----------------|
| To jobbers in carload lots on dock             | \$2.13         |
| "    less than carload lots on dock            | 2.18           |
| To retailers in less than carload lots on dock | 2.31           |
| Small lots from store                          | \$2.30 to 2.35 |

**Barb Wire:** Business in this important line for domestic demand is not extravagant in amount, but holds up fairly well. Export demand is reported as in good condition, and likely to remain so. Prices remain as previously quoted for domestic trade, as follows, f. o. b. Pittsburgh, net cash 60 days, or 2 per cent. discount for cash in 10 days:

|                                                 |        |
|-------------------------------------------------|--------|
| To jobbers in carload lots, Painted             | \$2.50 |
| "    Galvanized                                 | 2.80   |
| To jobbers in less than carload lots, Painted   | 2.55   |
| "    Galvanized                                 | 2.85   |
| To retailers in carload lots, Painted           | 2.60   |
| "    Galvanized                                 | 2.90   |
| To retailers in less than carload lots, Painted | 2.70   |
| "    Galvanized                                 | 3.00   |

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden 10 cents per 100 pounds higher than the prices above named.

**Plain Wire:** The current demand for this staple, while fairly good, is not governed by large quantities, and the prospect does not promise any unusual transactions in the immediate future. Quotations may be quoted as follows, f. o. b. Pittsburgh, terms 60 days, or 1 per cent. discount for cash in 10 days:

|                              | Base sizes. |        |
|------------------------------|-------------|--------|
|                              | Plain.      | Galv.  |
| To jobbers in carload lots   | \$2.15      | \$2.55 |
| "    less than carload lots  | 2.20        | 2.60   |
| To retailers in carload lots | 2.25        | 2.65   |
| "    less than carload lots  | 2.35        | 2.75   |

Above prices are for the base numbers, 6 to 9. The other numbers of Plain Wire and Galvanized Wire take the several advances noted in the following table:

| PLAIN FENCE WIRE ADVANCES (CATCH WEIGHTS.) |                               |               |   |
|--------------------------------------------|-------------------------------|---------------|---|
| Nos.                                       | Base                          | Galvanized.   |   |
| 6 to 9.....                                |                               | \$0.40 extra. |   |
| 10.....                                    | \$0.05 advance over base..... | .40           | " |
| 11.....                                    | .10                           | .40           | " |
| 12 and 12½..                               | .15                           | .40           | " |
| 13.....                                    | .25                           | .40           | " |
| 14.....                                    | .35                           | .40           | " |
| 15.....                                    | .45                           | .75           | " |
| 16.....                                    | .55                           | .75           | " |
| 17.....                                    | .75                           | 1.00          | " |
| 18.....                                    | .85                           | 1.00          | " |

**Wire Cloth:** At the conference recently held by the manufacturers in this important special line, it was found difficult to reach any definite agreement as to an arbitrary price governing transactions. The market was left to future consideration. A nominal price of \$1.25 was named for small trade, and future development of a proper policy for large buyers will depend upon the size of orders and the facilities of the mill to accept orders for specified dates of delivery.

**Poultry Netting:** In common with similar products, at the recent conference of manufacturers, the future discounts on Poultry Netting were made the subject of discussion, and a satisfactory decision was arrived at, governing the large sales which are indicated as possible for the coming season. The quotation named as the market price for fair-sized quantities was 80 and 20 per cent.

**Window Screens, Doors, Etc.:** The Continental Company, Detroit, Mich., were organized last year to act as a distributing agent for the following leading makers: The A. J. Philips Company, Fenton, Mich.; The Porter Screen Mfg. Co., Burlington, Vt.; Owosso Mfg. Co., Perla, Ark.; Buchanan Screen Works, Hillsdale, Mich.; Cortland Door & Window Screen Co., Cortland, N. Y.; Owosso Mfg. Co., Owosso, Mich.; Wabash Screen Door Co., Rhinelander, Wis., but after a year's experience they decide the previous methods of distribution were preferable, and an open market is the natural result. It is intended to maintain the regular standard list of door and window screens now in use, and the customary advances for extras, but discounts, it is believed, will reach a lower range than prevailed previously.

**Cordage:** The cordage market is in firmer condition at present than for some time. Prices are held at quotations given in our previous issue, and lower prices are not anticipated at present. The following quotations represent the market at the present time:

|                                        | Pounds. | Cents. |
|----------------------------------------|---------|--------|
| Manila, 7-16 inch and larger.....      | 50      | 2      |
| "    ¾ inch                            | 10      |        |
| "    ¼ inch and 5-16 inch.....         | 10½     |        |
| Sisal, 7-16 inch and larger.....       | 6½      |        |
| "    ¾ inch                            | 7       |        |
| "    ¼ inch and 5-16 inch.....         | 7½      |        |
| "    Lath Yarn, Medium and Coarse..... | 6½      |        |

**Linseed Oil:** The Dean Linseed Oil Co. quote as follows:

|                                                                                |                      |
|--------------------------------------------------------------------------------|----------------------|
| In lots of less than 5 barrels.....                                            | 76 cents per gallon. |
| In lots of 5 barrels or more.....                                              | 75 cents per gallon. |
| The five barrel price only applies to deliveries of that quantity at one time. |                      |
| Boiled Linseed Oil, 2 cents per gallon higher than raw.                        |                      |
| Calcutta Oil, 85 cents per gallon.                                             |                      |

## THE BOSTON TRADE.

The month just closed has been satisfactory as regards volume, and from reports throughout New England general business is in good condition. The unseasonable weather and the fact that it is the month preceding the Presidential election may have curtailed the demand, but it has not been noticeable, October sales being a good percentage over last year.

The values placed on many lines are still uncertain, and on such goods as are being held at reasonably high figures and controlled by agreements and combinations, we expect to see many changes before January 1st.

Stocks are light in the hands of both jobber and retailer, orders being small, showing no disposition to carry over any more goods than actually necessary.

There seems to be much interest manifested in the coming Hardware Convention, and it is expected that it will be the most interesting and helpful of all meetings which have been held by this national organization. FRYE, PHIPPS & Co.

#### THE PHILADELPHIA TRADE.

The month of October has been one of the surprises of the year, as, in spite of a declining market, and a Presidential campaign, the month has closed with a volume of sales largely in excess of the ordinary, and, in fact, making it the heaviest October for a period of ten years.

This is certainly a most gratifying record, especially in view of the fact that, owing to a falling market, dealers are buying from hand to mouth, and are certainly not purchasing a dollar's worth in excess of their wants. The mere fact that compulsory purchases should exceed the purchases of last year, when prices were booming and there was a tendency to speculation, is a pretty clear indication that stocks are light throughout the country, and that the demand on the retailer is good. Not only are jobbers very well pleased with the month, but manufacturers are also feeling the impetus, and reporting a largely increased trade.

Prices are already firming up on some lines, and prophets are not wanting to say that the drop in prices has reached the limit, and that higher prices are to be expected in the near future.

Everything now hinges upon the election next Tuesday, and if this results favorably we cannot but feel there is a prosperous business year before us, and, by the time this is in print, the results will be determined, and anxiety on this score will be at an end, and we earnestly hope, whoever may be elected, the prophets of evil will be disappointed, and that our country will continue to prosper.

Indications of a firmer market are to be found in the fact that manufacturers of common carriage bolts, machine bolts, and similar goods, have become heartily tired of the demoralization existing in their lines, and have already made a slight advance, feeling the way toward higher prices in the near future.

The manufacturers of wire and wire nails report a most excellent business, and claim, at the present rate, they will soon exceed the volume of business of last year, which, of course, was largely speculative. It would seem as if manufacturers had now reached the end of their depression, and those who have been complaining of a limited business in the past are now foremost in reporting a decided revival in business.

BIDDLE HARDWARE Co.

#### THE PITTSBURGH TRADE.

Writing on the verge of election, we can report business quite good. Notwithstanding political excitement, unseasonably warm weather and low values, October footed up a nice increase on the same month a year ago, when we were in the midst of "boom" times and high prices. All the industries in and around Pittsburgh are prospering, and the merchant shares in their prosperity. Let us hope nothing in the result of next Tuesday's ballot will interfere with this condition of affairs. The approaching meeting of the National Hardware Association at Richmond, Va., on November 21st,

is occupying the attention of its members. The interests of the jobber are so bound up with those of the manufacturer and the retailer that all classes must be considered. We believe that the necessity for each of the three in distribution to the consumer is now generally recognized, and that the distinct province of each in that distribution will be better observed in the future. There need not be and should not be any antagonist, when each has his own part in the business economy to fulfil.

LOGAN-GREGG HARDWARE Co.

#### THE CLEVELAND TRADE.

Confidence in the good sense of the people has prevented the Presidential campaign from serious interference with business. Business men have been too sure of the result to get much excited, and too profitably employed to leave their business and engage in politics. Serious doubt of the result would have paralyzed business. That the people intended to vote is evidenced by the fact that nearly ten thousand more votes were registered in this city than in 1896. As the stability of Republican government rests upon the good sense of the people, it is a matter of congratulation that a good reason is demanded when a change of administration is asked for. It is of curious significance that only goods controlled by combinations have seriously declined, while agricultural products have advanced. The great export demand for manufactured goods exists because the great combinations have been able to make prices to get that trade, and that trade has demanded a large amount of extra labor that must be fed and clothed.

Pig iron has declined from \$26 per ton to \$13.50, and in the face of this great decline, agricultural products have advanced, and yet we are being warned of the danger of Trust.

It may be cruel to make the farmers rich, but the farmer's vote is not likely to endorse this opinion. The fact is, the right of private property is so clearly allied to liberty itself that attacks upon it are not popular.

Before your next issue the voice of the people will have been expressed, showing that Republican government rests on a solid basis.

THE LOCKWOOD-TAYLOR HARDWARE Co.

#### THE CHICAGO TRADE.

In a Presidential year we have never experienced so little disturbance to trade conditions as has been the case the past Summer and Fall. Business with us has been much better than one year ago. We are extremely busy at the present time, and, what is more, our traveling salesmen are reporting a most hopeful feeling among their customers in the smaller towns. Farmers throughout the Northwest seem to have been doing very nicely; many of them not only have their farms paid for, but are loaning money and improving their farm buildings. Indications are that considerable building will be done during the next twelve months in the smaller cities and suburban towns, so that we are well pleased with the outlook. Prices as a rule are being very well held, and the downward movement in prices which we experienced through the Spring and early Summer seems to have been checked. The late advances in the steel and iron markets are helpful to the trade generally, and, as a rule, salesmen are having little trouble in securing orders for future goods.

WELLS & NELLEGAR Co.

#### THE SAGINAW TRADE.

As the month closes, and merchants compare the results of October, 1900, with the same period of last year, it is very gratifying to note that results are very flattering in this territory, although we have had very unseasonable weather, more like August than October, and this has necessarily reduced the sale on stoves and other kindred cold weather lines; still the volume of business for October does not seem to be affected. It was quite generally believed that, as election approached, the uncertainty in the minds of the people would curtail business to a great extent. However, this has not been noticeable, and it is very pleasant to note a slight increase in business for October over the

same period last year. Crop conditions are good, and farmers have had an exceptionally fine Fall to get their land in shape.

MORLEY BROTHERS.

### THE COLUMBUS TRADE.

The fine weather that prevailed through the month of October still continues, and while it is not just the kind of weather for some branches of the mercantile world, it certainly is ideal weather for those who have out-of-doors work to do. Buildings that were started with the expectation of being finished in the Spring are being finished this Fall, and a great many new buildings are being started at this late date. The demand for Builders' Hardware is good, but such goods as Stoves, Robes, Horse Blankets, Axes, Cross-cut Saws, Meat Cutters and Stuffers are not being re-ordered as they would be if we had cold weather. Retail merchants bought their first orders early, but the weather has been too warm to reduce their stocks enough to duplicate. Farmers are busy with their corn husking, and there is no excuse for them if they fail to get their work well cleaned up. Wheat is looking well, but some complaints are made that the Hessian fly has been busy these warm days. The sharp frosts,

however, have reduced danger from that pest. Prices are holding well on most lines, and a number of items have stiffened up very materially. Bolts, Steel Tire and Rope are much firmer than they were two weeks ago. If we are not much mistaken, a number of lines will advance soon. Some goods are too low. Sledges, Picks and Mattocks are especially low in price, and will no doubt be higher. The Shovel Association seems to be master of the situation once more, but new thorns will appear soon to prod them again. The question is, how long can they continue to buy up such concerns as the Laughlin Shovel Co.? It costs no small sum to control such a concern. If the Shovel Association would reduce the price on shovels instead of buying up all the factories that spring up, it would be much cheaper. What will be done with all these factories when the final reckoning comes? And it will come as sure as the sun rises. When it does come, some one will get hurt. The gun trade in this section is not of extra significance on account of the short shooting season; but the old guns will be kept hot, judging by the amount of ammunition that is being sold. It is next to impossible to get enough loaded shells to supply the

demand. Taking all in all, Hardware dealers have no kick coming about trade so far in 1900.

THE SMITH BROS. HARDWARE CO.

## THE DAVENPORT TRADE.

With a Presidential election billed for to-morrow, and a National Hardware show to come off in Richmond in a few days, we are hardly in good form to write a satisfactory report for *Hardware* edition of the 10th inst.

If we only knew to-day what the result of to-morrow's election will be as well the readers of *Hardware* will know before this is in print, we could make money enough before the 10th inst. to buy many Hardware stores. We have not this knowledge, however, and we will have to grind away as usual and depend upon what we can learn about the iron trade in Richmond to assist us in making a living the next four years.

Trade is about the same in amount of dollars as a year ago, and this, of course, means quite an increase in tonnage.

Weather is delightfully pleasant; there has been no killing frost as yet. Collections satisfactory.

SICKELS, PRESTON & NUTTING CO.

## THE MINNEAPOLIS TRADE.

We have had considerable rain that must have interfered quite seriously with usual Fall work on the farms, but now it has cleared off, and we shall probably have a spell of weather such as Minnesota is noted for—good, clear, bright, beautiful days. The price of wheat is very satisfactory, on quite a higher range than it was last year, while flax is away out of sight, and the crop is fairly good, we understand. Minneapolis is taking a place as the largest, primary flax market of the country, the same relative position she holds as to wheat, flour and lumber, while large quantities of linseed

oil are manufactured here. This industry is steadily growing, and if not now the largest producer, we certainly shall be before long.

Labor is very well employed, and at good wages. The lumber mills are still running, and will continue until the river freezes. The stock of lumber, we understand, is fairly well assorted but not very large. Prices, while not as high as prevailing earlier in the season, are firm and on a profitable basis.

Prices on Hardware generally, in a small way especially, we think, are fairly well maintained, but when any quantity of goods is required, particularly in the builders' Hardware line, cost does not seem to enter into the calculation, while nails are sold freely by at least one party here at the lowest jobbers' cost, this being their advertised price.

There have been large quantities of ammunition sold, as shooting this Fall has been quite good, and we think more people have been out than usual.

Before this is in print we shall know whether the people at the polls have decided to continue the present administration or not. Whatever happens, we hope it will be a wise decision, but trust that the present prosperous conditions will not be disturbed by any change. W. K. MORISON & Co.

## THE OMAHA TRADE.

Trade during the past week might have been somewhat improved by more seasonable weather, as it has been unusually warm and pleasant; and season goods on this account have moved somewhat slowly, but, notwithstanding this fact, the volume of trade has been heavy and about all that we could handle with comfort. Contrary to expectations, the fact of its being a Presidential year has not affected trade in the least, and with a spell of cold weather to stimulate the de-

mand for season goods, it would undoubtedly result in an exceptionally large volume of business.

Collections are somewhat above the average, and no complaints are heard from the country in regard to either collections or trade.

RECTOR & WILHELMY Co.

#### THE ST. PAUL TRADE.

The trade conditions in our territory are not as satisfactory as could be desired, owing to a short crop and a consequent lack of money, making the merchant carry the farmers account over till next crop and the jobber carry the retailer in the same way. Then the lack of trade is making competition stronger and the effect is to see how low quotations can be made, till between all these undesirable conditions the doing of business is rather an uncomfortable thing. We would rather go fishing. Gradually the market is assuming a firmer basis, and by next Spring we will probably have forgotten our present trouble, or accumulated new ones.

We are looking forward, with much pleasure, to the meeting of the jobbers at Richmond, and hope to renew many friendly acquaintances made; and expect, as usual, to gain knowledge and return to our work with renewed vigor and with a feeling that our lines might have been placed in more unpleasant places.

C. W. HACKETT HARDWARE CO.

The Bureau of Statistics' compilation discloses many unique characteristics of the commerce of the Great Lakes. For instance, in the case of Conneaut, Ohio, which Andrew Carnegie has declared will one day be the greatest ore-unloading port in the world, the 353 vessels which have entered the harbor this season have brought 1,748,255 tons of iron ore, or a greater quantity than was discharged at any other port, with two exceptions. One of these exceptions is the port of Ashtabula, also on Lake Erie. Ashtabula will this season rank as the greatest ore-receiving port in America, having received up to October 1 a total of 2,933,647 tons.

The lake lumber trade, in which there was such demoralization last year, appears to be making a very favorable showing this season. For the month of September the aggregate cargoes transported amounted to 436,926,000 feet, and for the season up to October 1, 1,427,000,000 feet. Duluth ranks as the greatest lumber-shipping port, having sent out 277,071,000 feet during the season. Chicago heads the list of receiving ports, 378,546,000 feet having been unloaded at her wharves. Cleveland is a pretty close second, with a record of 339,704,000 feet for the season.

The first book ever printed in Switzerland bears the date of 1470.

## THE "BARDSLEY" OIL DOOR CHECK AND SPRING.

This device—as now made—has the following features which are peculiar to itself :

No packing friction.

A releasing device—especially useful on apartment house doors and doors that close against a draught.

Spring of polished clock steel of superior quality—ensuring soft and noiseless action and great durability.

The mechanism is arranged so that the spring cannot be used wrong side up and thus bent out of shape or broken.

This Door Check as now made is recommended as being without a peer and the price is lower than any similar device in the market.

### JOSEPH BARDSLEY,

147 to 151 Baxter Street,  
NEW YORK.

### WHY IS THE

PAT. 1898.

### O. K. WASHER THE BEST WASHING MACHINE?

#### BECAUSE—

- 1.—It is the only Rotary washer that has Revolving Steel Ball Gearing, reducing the friction and thus making machine so light running and almost noiseless.
- 2.—The tub is made of Louisiana Red Cypress Lumber.
- 3.—The wheel turns right or left, pin wheel or dasher reverses automatically, turning the clothes back and forth through the hot soap-suds, and cleaning them without rubbing them to pieces.
- 4.—This washer is made by experienced mechanics, and will out-last any other washer on the market.
- 5.—The lid on tub closes tight, no escape of steam.
- 6.—Has a solid wringer box with iron brackets.

Manufactured by H. F. BRAMMER MFG. CO.,  
DAVENPORT, IOWA.

## HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

### New Hardware Stores.

Alden, Ill.—W. W. Fleming.  
Chappel, Tex.—E. W. Bennett.  
De Soto, Mo.—Jenkins & Berg.  
Hampton, Minn.—J. P. Doffing.  
Musserville, Ia.—N. Herr.  
North Creek, N. Y.—Wm. E. Sullivan,  
Ohio; Scott & Armstrong, Corning.  
No. Milwaukee, Wis.—E. M. Seigrist.  
Pearl City, Ill.—J. H. and Charles Knapp  
contemplate going into the Hardware business in Chadwick.

Richmond, Va.—The Acme Hardware Co. has been incorporated. Capital, \$10,000. Incorporators: J. T. Vaughan, C. A. Motley, G. H. Clarke, J. G. Pollard, H. G. Dyson, all of Richmond.

Selma, Ala.—Papers have been filed in the Probate Office incorporating the Johnson Hardware Co. The capital stock is \$10,000. Tom Johnson, H. B. Johnson and Julius Fiebleman compose the firm. This corporation takes the place of Johnson Bros., Hardware merchants of this city.

Toledo, O.—Fred Gemple is preparing to engage in the Hardware business in the Browning Building, on Broadway, near South Street. The building is now being fitted up for that purpose.

Watertown, N. Y.—Early in November a new Hardware store will be opened at 3 Burdick Building, the store soon to be vacated by J. E. Lewis. The proprietors will be Joseph W. Pool and J. Sterling Sill.

### Changes and Improvements.

Aledo, Ill.—T. H. Clark and Joseph Boyd have bought the Hardware stock of R. H. Boyd.

Angola, Ind.—It is reported that J. W. Snyder has bought the Bachelor Hardware stock.

Audubon, Ia.—M. H. McCall succeeds to the Hardware and other business of Stonebrook & McCall.

Ayrshire, Ia.—McGuire Bros., Hardware and general store, have dissolved partnership.

Boles, Ark.—Freeman & Hall succeed to the Hardware and other business of W. L. Freeman.

Bordentown, N. J.—The S. E. Burr Hardware Co. have added another story to the rear of their already extensive building.

Brownsville, Tex.—Low & Low have dissolved partnership. R. M. Low will continue the stove and Hardware business.

Carthage, N. Y.—Reuben and Charles Chaufy have purchased the Hardware business of L. J. Vinier, and will occupy the fine new store now being fitted up by Mr. Vinier on the south side of State Street, as soon as completed.

Chadwick, Ill.—Dial & Becker have bought the Hardware stock formerly managed by Mrs. J. E. Mullen.

Clyde, O.—Starr & Arner have purchased

the entire stock of general Hardware and stoves of the Jackson Hardware Co.

Danbury, Ia.—F. E. Crane has bought the Hardware and other stock of Siebold Bros.

Flora, Ill.—The Hardware business of J. J. Bowman has been transferred to I. H. Southwick.

Genoa, N. Y.—E. C. Hagin has purchased D. Mastin's interest in the Hardware store formerly Mastin & Hagin.

Harlan, Ia.—G. C. Poling has bought a one-half interest in the Hardware business of R. G. Fay.

Kellogg, Minn.—George Butler has bought the Hardware stock of Edward McDonough.

Kinerim, Ia.—J. B. Wartchaw & Co. are building an addition back of their Hardware store, 12x24 feet, to be used as a tin shop.

Knoxville, Ia.—F. R. Brackney succeeds to the Hardware business of Brackney Bros.

Lake Charles, La.—The new brick business house of the G. T. Rock Hardware Co., with a frontage on both Ryan and Piyou Streets, is nearing completion, and will be one of the handsomest and most commodious buildings in the State.

Lamoni, Iowa.—Graves & Yost have bought the Hardware stock of Haas & Hatcher.

Letts Corner, Ind.—Adams & McCorkle will continue the Hardware business of Boyd & Adams.

Logan, Kan.—E. I. King & Co. have bought the stove, Hardware and implement stock of D. C. Dach & Son.

Los Angeles, Cal.—The Hoffman Hardware Co. are erecting a three-story and basement brick warehouse building in rear of 226 South Main Street.

Luverne, Minn.—W. Pinkerton, the new proprietor of the Hardware and implement business at the Huntington Bros.' stand, has completed the inventory and opened for business.

Marion, O.—The Hardware store that has been under the management of J. Hood & Son for many years was sold recently to Judge Martin Burke and T. J. Ryan. The new firm will be known as Ryan & Burke.

Milton, Ia.—A. F. Haney has bought the Hardware and harness stock of George Boyd & Son.

Mineral Wells, Tex.—The Moyer & Riggins Hardware Co. and the Smith & Frost Hardware Co., of this city, have consolidated, and will be incorporated under the laws of Texas with a cash capital stock of \$35,000. A. A. Moyer is president; Cicero Smith, vice-president; J. E. Quarles, secretary; H. N. Frost, treasurer, and J. L. Riggins, general manager.

Mondamin, Ia.—George Edmunds has bought the Hardware stock of D. A. Morrow.

Monroe, La.—Work has begun on the

fine two-story building of the Monroe Hardware Co.

Moulton, Ia.—Clark Bros. & Burgher succeed to the Hardware business of Powers & Kincart.

Nora Springs, Ia.—R. S. Shanks succeeds to the Hardware and implement business of Shanks & Marshall.

Osborn, O.—Dickman Bros. have bought the Hardware stock of Henry McFeeley.

Oxford, N. Y.—Cook & Pughe have disposed of their Hardware store to James A. Hopkins and Sackett H. Mead, who will assume the proprietorship as soon as the inventory, which is under way, is completed.

Phillipsburg, Kan.—French & Hahnenkratt have sold their stock of Hardware.

Pickering, Mo.—Albert Hinton has bought the Hardware stock of H. H. Wagner.

Reynoldsville, Pa.—The Keystone Hardware Co. have taken full possession of the Hardware store formerly owned by Hall, Barton & Co.

### Business Embarrassments.

Niagara Falls, N. Y.—J. T. Henderson, Hardware dealer, has made an assignment.

Tiffin, O.—Charles Goetz, Hardware merchant, has filed a petition in bankruptcy in the United States Court at Toledo. His assets are \$21,000; liabilities, \$18,000.

Topeka, Kan.—The Stafford & Lee Hardware firm of Riley and Leonardville, which made a voluntary assignment recently with D. E. Deputy, of this city, as receiver, is still in an unsettled state. It is thought by the receiver that the resources will exceed the liabilities by several hundred dollars, and that the creditors will be paid in full.

### Fires in Hardware Stores.

Hornellsville, N. Y.—E. J. Davis. Small loss.

Mt. Vernon, Ill.—E. F. Warman. Loss, \$30,000.

Paducah, Ky.—Scott's Hardware Warehouse.

Parish, N. Y.—R. C. Robertson. Loss, \$4,000.

Redondo, Cal.—Henry Venable.

Richwood, O.—Thomas H. Biddle. Loss, \$500; insured.

Sullivan, Ind.—J. B. Mullane. Loss, \$500.

### Burglaries in Hardware Stores.

Buckner, Mo.—Wallace King; cutlery.

Chico, Cal.—L. L. Hubbell; ammunition. Donnellson, Ia.—George Armknecht; knives, etc.

Ephrata, Pa.—Sprecher's Hardware store; \$150.

Mahanoy City, Pa.—Hersker & Co.; ammunition.

Marmora, Ont.—William Hughes; files. McCool, Neb.—E. E. Lincoln; razors.

Philadelphia, Pa.—W. H. Lloyd, 38th and Market Streets; \$40.

Seaford, Del.—Lew Wallace; \$200.

## HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

### New Companies, Etc.

Charlotte, N. C.—The Cole Mfg. Co. has been incorporated, with a capital stock of \$15,000, for the purpose of manufacturing a patent planter which E. M. Cole, a graduate of Vanderbilt University, has invented. The incorporators are E. A. Cole, E. M. Cole, E. W. Cole, E. O. Cole, W. E. Holt, J. S. Spencer, J. H. Weddington, B. D. Heath, J. M. Davis, J. M. Scott, J. H. Settle, E. Valover, H. M. McAden, Allen Hardware Co., Belk Bros. The new company will build a factory at Charlotte shortly.

Cleveland, O.—The Interstate Foundry Co. has been incorporated, with a capital stock of \$400,000.

Jackson, Mich.—George A. McKeel & Co. will build a factory here at once for the manufacture of Hardware specialties and metal articles used by carriagemakers, etc.

Columbus, O.—The Peerless Stove and Range Co. has been incorporated with a capital stock of \$10,000. George B. Donovan, John A. Witman, A. C. Witman, J. E. Witman and H. E. Stafford are the incorporators. It is organized for the purpose of manufacturing and dealing in gas stoves.

Columbus, O.—The Columbus Pneumatic Tool Co. has been incorporated, with a capital stock of \$25,000. It will manufacture and sell the "U. & W." piston air drill, pneumatic tools, railway specialties and other articles. The company now has an experimental plant on Parsons avenue, where the drill is made. It has proven a success, and in the near future a new plant will be erected. The incorporators are S. M. Dunlap, T. C. Dunlap, F. H. Plum, F. S. Morris and A. M. Steinfeld.

Detroit, Mich.—The Wolverine Stove Co. has been incorporated, with a capital stock of \$20,000.

Erie, Pa.—An application will be made to the Governor of the Commonwealth for a charter of incorporation for the Odin Stove Mfg. Co. of the City of Erie. The capital stock of the company will be \$30,000, and the charter will be issued to Carl Hoffstetter, J. C. Hoffstetter, T. W. Shacklett and R. T. McClure. The Odin gas stove has been manufactured in Erie for several years by the Odin Stove Co., Limited.

New Albany, Ind.—The I. F. Force Handle Co. have filed articles of incorporation in the office of the County Recorder. The business of the concern is the manufacture of handles for tools of every description. The capital stock is \$25,000. The incorporators are I. F. Force, Francis W. Peters and John W. Force.

St. Paul, Minn.—The American Wringer Co., a Rhode Island corporation, has filed

articles of incorporation with the Secretary of State under the provision of the law affecting foreign corporations, and assigned \$80,000 as the share of its capital engaged in Minnesota. The company has \$2,500,000 capital.

### Changes and Improvements.

Bridgewater, Mass.—The Monarch Horse Shoe Nail Co. has sold out its business and machinery to the Capewell Horse Nail Co. of Hartford, Conn., and the business will be moved to that place at once.

Cleveland, O.—The Cleveland Hardware Co. will erect a three-story brick building at Lake Street and Belden Avenue, to be devoted to manufacturing purposes. The building will cost \$50,000.

Cleveland, O.—The Sherwin-Williams Co. will erect a five-story addition to its Lime Street plant. The addition will cost \$30,000.

Detroit, Mich.—The capital stock of the Michigan Safety Furnace Pipe Co. has been increased to \$36,000, fully paid in.

Glassport, Pa.—Struthers & Hannah, architects, of Pittsburg, have completed plans for the addition to the American Ax and Tool plant. It will be in the shape of a two-story building, 715 feet long and 150 feet wide, with steel frame, brick walls and slate roof. The main building, now under roof, is 400 feet long and 310 feet wide. There are three other buildings, but smaller, in course of erection. Machinery is now being placed in the main building. The plant is to begin operations in February, with from 600 to 700 men. This force will be doubled when the addition is complete. The plant will then embrace forty acres of land.

Ivoryton, Conn.—J. P. Southworth is building an addition to the key factory.

Lowell, Mass.—Owing to the death of F. S. Perkins, the Perkins machine shop has been sold at public auction without reserve. This property has been engaged in the manufacture of the well-known Perkins engine lathes and other tools.

Milwaukee, Wis.—A four-acre factory site has been purchased by the Suelflohn & Seefeldt Co., Hardware manufacturers. The site purchased lies between Twenty-fifth and Twenty-seventh Streets, facing the Milwaukee road tracks. The property was bought of Wm. J. Morgan and the price paid was \$21,000. The company contemplates erecting a large plant in the near future.

Reading, Pa.—Extensive improvements are being made to the Penn Hardware Works, Spruce and Water Street. Along the Spruce Street side the erection of a third floor along the entire length of the building is in progress. The addition will be 22x150 feet in dimensions, the greater part being of brick and the balance of iron construction. This enlargement was made necessary by the increase in business at the plant. The extra room is required for the nickel-plating and other departments.

South Bend, Ind.—The Singer Mfg. Co. has given out a contract which means the expenditure of about \$1,000,000 and the employment of many more wage-earners in this city. The company has in South Bend an immense plant. This the company has decided to abandon, and has contracted for the erection of a new factory in the western part of the city. The company will erect buildings costing about \$600,000, in addition to the large buildings of the old Economic Plow concern. The \$600,000 does not include the machinery and many other improvements to the interior of the buildings. The buildings will be modern in every particular. They will be fireproof and thoroughly equipped with sprinkling and other apparatus for protection from fire. The contract calls for the completion of the buildings by August 1, 1901.

Wichita, Kan.—A deal has been consummated whereby Moore Bros., of the Wichita Stove Works, become the owners of the property on First Street between the Santa Fe tracks and Mead Avenue.

### Recent Fires.

Irondale, O.—A portion of the plant of the Queen City Stove Co. at Irondale, has been destroyed by fire. The loss was between \$1,500 and \$2,000. The origin of the fire is not known.

Leominster, Mass.—The Fork shop property, on Lancaster Street, has been burned to the ground. The buildings, consisting of a two-and-a-half-story frame shop, a barn and a small office building, were burning when the firemen arrived. The shop was destroyed, but the barn and office were partly saved. The loss is estimated at \$2,000, with insurance for \$1,000. It is thought the fire was of incendiary origin.

Lock Haven, Pa.—Fire broke out recently in the ax and tool factory of the Lock Haven Woodworking Co., and as the building was frame, it was but a short time until it was reduced to ashes. It is supposed that the fire started in the piles of shavings on the floor in the eastern end of the building. The firemen worked hard, but it was impossible to save the building. The company place their loss on the buildings, machinery, finished stock and lumber at \$10,000, on which there was about \$5,000 insurance.

### Recent Embarrassments.

Charlotte, N. Y.—The schedules of the Charlotte Steel and Iron Co., whose office is at 20 Broad Street, New York, show liabilities \$27,000, nominal assets \$25,317, and actual assets \$20,325.

### Miscellaneous.

Auburn, N. Y.—At a meeting of the Auburn Stove Foundry Co. the following Board of Directors was elected: Dr. B. F. Sturges, Edward Berry, N. I. Jordan, A. M. Penley and L. A. Cobb. A. M. Penley was elected president and treasurer and N. I. Jordan clerk.

## BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

### New Companies, Agencies, Etc.

Providence, R. I.—Articles of incorporation have been issued by the Secretary of State to Orville L. Leach, Charles H. Waite, Archibald Martin and John C. Rohwer for a corporation to be known as the Emory Tire Co., for the manufacture of bicycle and vehicle tires. The location will be in the city of Providence, and the capital stock is \$100,000.

Salt Lake, Utah.—Articles of incorporation of the Western Arms and Sporting Goods Co., which lately succeeded to the business of Browning Bros. in this city, have been filed with the County Clerk. The capital stock is fixed at \$30,000. W. W. Chisholm is president; M. H. Walker, vice-president; John H. Walker, treasurer; I. Milton Barrett, secretary and manager, and Owen Hogle is the other director and incorporator.

### Changes and Improvements.

Atlantic City, N. J.—Charles Singer has retired.

Chicago, Ill.—The Sherman Cycle Co. have closed a deal whereby they acquire the stock, material on hand, trademarks and goodwill of the bankrupt Manson Cycle Co. The Sherman people will continue the manufacture of Manson bicycles in conjunction with the Sherman.

Columbia, S. C.—A few days ago W. Hampton Gibbs, Jr., who has recently accepted a fine position with a large insurance company, sold out his well-established bicycle business. It was bought by C. Pelhan Wheeler, who will continue it at the old stand.

Detroit, Mich.—Francis J. Bowes succeeds Bleasdale & Bowes.

Eugene, Ore.—D. B. Paine & Co. have dissolved partnership.

Glens Falls, N. Y.—Laraway & Hibbard have leased the Ordway store at Baker's Falls and removed their bicycle business there.

Glenwood, Ia.—Sharp & Gettler succeed C. W. Rathke.

Haverhill, Mass.—The Pentucket Cycle Co. has purchased business of Charles A. Senter.

Jackson, Mich.—Elliott & Birney succeed D. A. Yocum & Co.

Kenosha, Wis.—Gormully & Jeffery, bicycle manufacturers, Chicago, are negotiating with the bicycle trust for the purchase of the Sterling factory in this city. The factory will be used for the manufacture of sewing machines, which the firm is now manufacturing in Cincinnati. The plant will be one of the finest equipped in the country.

Los Angeles, Cal.—The E. R. Risden Cycle Co., 452 So. Broadway, succeeds to the retail business of the Avery Cyclery.

Los Angeles, Cal.—The E. H. Crippen Cycle and Supply House succeeds to the wholesale and jobbing business of the Avery Cyclery.

Madison, Ind.—Preston C. Lewis succeeds W. O. Lewis.

Madison, N. J.—Fred Wilson and T. Dervan have purchased D. E. Ely's bicycle business and moved into the Johnson Building.

McFall, Mo.—J. R. Tull succeeds Louis Bros.' Hardware Co.

Milwaukee, Wis.—Theodore Jonas, the bicycle manufacturer, is having plans prepared for a new factory, which he will build in addition to his present plant at Eleventh and National Avenues. The building is to be frame, two stories high and 30x140 feet in ground dimensions. It is to be used for manufacturing and salesroom purposes, and the present plant, a building 20x100 feet, will also be operated in connection. The force of twenty-four employees will be increased to over fifty men. The improvements on the plant, including machinery, will be about \$4,000.

Nichols, N. Y.—Elmer Ellis will build a larger shop on the present site.

Riverside, Cal.—F. D. French has purchased the business of A. F. Palmer.

Rochelle Park, N. J.—It is rumored that Mr. Smith, who runs a wheelmen's retreat, has purchased a bicycle repair shop in Hackensack.

Rochester, Pa.—Frank E. Gray, repairing, has closed.

Rockaway, N. J.—D. E. & F. Fitcher will add a 15 horse-power engine to their bicycle establishment. This has been made necessary by the large increase in their business.

Rutland, Vt.—Howland & Ingalls have removed to 83 Wales Street.

Trenton, N. J.—John Howard, having a bicycle store on North Broad Street, near Perry, will remove to the store near Hanover Street with his brother William.

Rock Island, Ill.—C. A. Spencer has received the general agency for Illinois and Iowa for the Stearns and Syracuse bicycles.

Salt Lake, Utah.—Browning Bros. Co. of Ogden and Salt Lake have sold out their Salt Lake branch to the Western Arms and Sporting Goods Co. The new company is composed of M. H. Walker, J. D. Kendall, W. W. Chisholm, J. H. Walker and I. M. Barratt, who will continue the business at Browning Bros.' stand on South Main Street. Capt. I. M. Barratt, one of the most popular sportsmen of the West, will be the manager of the new company. Browning Bros.' Company will continue to do business at their Ogden house.

San Francisco, Cal.—The Hartford Rubber Works Co. have opened a branch at 52 First Street, with M. J. Tansey in charge. It will be made the distributing point for Hartford tires on the Pacific coast.

San Francisco, Cal.—The San Francisco Riding Academy have purchased the White Cyclery, 2634 Fulton Street.

Sistersville, W. Va.—S. G. Kline has sold his bicycle supplies to J. Al Turner, who will have a repair shop on Virginia Street and Stewart's Lane.

Sodus, N. Y.—Bartle Johnson has purchased the Barber store.

Troy, Ill.—John C. Gebauer succeeds Gebauer Bros.

Wayland, Ia.—J. Wenger & Co.; J. Wenger has sold his interest.

West Rutland, Vt.—Harry Cummings will remove to Campbell Building, Marble Street.

Westerly, R. I.—Albert Pilling, the Cogswell Street bicycle dealer, has accepted the agency for the Wolff-American cycles for the coming year.

Wilsonville, Conn.—So successful has A. L. Adams been with his business in cements and lubricants that he has decided to remove to Worcester, Mass., where he will have better facilities for manufacturing and disposing of his product.

Worcester, Mass.—John W. Knibbs has bought a controlling interest in the Kendall Rubber Tire Co., of Providence, and will manufacture the Kendall rubber tire, patented last Spring. This may mean another industry for Worcester, though Mr. Knibbs has not yet decided whether the company will operate a plant in this city or not. A. E. Farwell, president of the company, will retain his office in Providence, and Mr. Knibbs, it is understood, is to be general manager and treasurer. He has been a stockholder in the company since its organization, two years ago.

### Recent Embarrassments.

Flushing, N. Y.—George Knapp, of Manhattan, has been appointed temporary receiver and placed in charge of the sporting goods business of Charles S. West, at 99 Main Street.

Jamaica Plain, Mass.—Charles A. Underwood, bicycle dealer. Liabilities, \$1,127; assets, \$564.

Muncie, Ind.—Judge Baker, of the United States Court at Indianapolis, Ind., has been petitioned by the H. T. Hearsey Bicycle Co., the Snider Cycle Co. and Frank Baldwin, all of that city, and several firms in nearby States, to declare John G. Otstott a bankrupt.

### Recent Fires.

Chicago, Ill.—The Featherstone plant of the American Bicycle Co., corner of Sixteenth and Clark Streets, has been damaged by fire to the extent of \$10,000.

Hoboken, N. J.—Fire was discovered recently in the bicycle and confectionery store belonging to A. E. Rouse, near the Pennsylvania Railroad bridge. The property and stock, which were badly damaged, were insured for \$1,400.

Martinsville, Ill.—J. H. Goff. Loss, \$200.

Pittsburgh, Pa.—Fire was discovered in the cellar of Joe Haltz's bicycle repair shop, 554 Fifth Avenue, a few evenings ago. Then second-hand bicycles were damaged. The loss will not exceed \$200.

## Columbian 1000-Shot Air Rifle.

Patented  
Oct.  
24, 1893.

CHAMPION  
MODEL.

This Air Rifle possesses advantages over all the Air Rifles now on the market. The materials used in its construction are the best. The appearance and workmanship is far ahead of any other Air Rifle made. It has an adjustable sight it shoots stronger and more accurate, less liable than any other to get out of order, all parts are interchangeable. We think we have the right to claim this as the "Champion" of all Air Rifles. List, per doz., Enameled, \$30.00; Full Nickel, \$45.00.

## PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

## If it is a Food Chopper Without a Lid, Don't Buy It.

A distinguishing and exclusive feature of the STAR FOOD CHOPPER is a plate hinged at the top of the hopper which, when pressed on the food to be cut, forces it upon the feed screw, thus preventing the possibility of injuring or soiling the fingers, which is liable to occur in using the other choppers.

The STAR is unquestionably the best machine of its kind ever offered to the public. It will cut without crushing raw or cooked meat, sea food, fruit, vegetables, etc., into coarse or fine pieces, according to the cutter used, of which three accompany each chopper.

It has eliminated all the objectionable features of other choppers, and has added several improvements that are distinctly its own. It is always in order, and the knives require no sharpening.

No other chopper has the many merits of the STAR. None is more simple in construction or easier to understand or clean. From start to finish in the small points as well as in the large, the STAR FOOD CHOPPER is the best.

**CHAS. D. BROWN, Agent,**

**160-162 Duane Street, New York City.**

## THE "BARDSLEY" OIL DOOR CHECK AND SPRING.

This device—as now made—has the following features which are peculiar to itself:

No packing friction.

A releasing device—especially useful on apartment house doors and doors that close against a draught.

Spring of polished clock steel of superior quality—ensuring soft and noiseless action and great durability.

The mechanism is arranged so that the spring cannot be used wrong side up and thus bent out of shape or broken.

This Door Check as now made is recommended as being without a peer and the price is lower than any similar device in the market.

### JOSEPH BARDSLEY,

147 to 151 Baxter Street,  
NEW YORK.

### WHY IS THE

PAT. 1898.

### O. K. WASHER THE BEST WASHING MACHINE?

#### BECAUSE—

- 1.—It is the only Rotary washer that has Revolving Steel Ball Gearing, reducing the friction and thus making machine so light running and almost noiseless.
- 2.—The tub is made of Louisiana Red Cypress Lumber.
- 3.—The wheels turn right or left, pin wheel or dasher reverses automatically, turning the clothes back and forth through the hot soap-suds, and cleaning them without rubbing them to pieces.
- 4.—This washer is made by experienced mechanics, and will out-last any other washer on the market.
- 5.—The lid on tub closes tight, no escape of steam.
- 6.—Has a solid wringer box with iron brackets.

Manufactured by H. F. BRAMMER MFG. CO.,  
DAVENPORT, IOWA.

... THIS FACTORY IS DEVOTED TO THE ...  
**MANUFACTURE OF SEWING MACHINES** FOR THE **HARDWARE TRADE.**

We supply more of the trade than all others, and we solicit correspondence from Hardwaremen who are looking up the Sewing Machine business.

## NATIONAL SEWING MACHINE CO.,

93 Reade Street  
NEW YORK.

BELVIDERE, ILL.

Address Correspondence to the Home Office.

49 Jackson Boulevard,  
CHICAGO.

## YOU COULDN'T BREAK IT WITH A SLEDGE

But it's lighter, stronger, handsomer and more desirable in every way than any other register made.

Every dealer and nearly every house-holder who has furnace heat, knows that there's a vast amount of breakage in cast iron registers.

## NOVELTY "NEVER BREAK" Stamped Steel Registers.

Are practically indestructible. They are made of polished steel plate which takes a much finer finish than cast iron either in Japan or electro plate and are really worth more than double. Prices will surprise you.

Order before your neighbor gets them.  
Can we send you catalogue?

# BRILLIANT SELF-MAKING GAS LAMP.

Bright as Sunlight and Nearly as Cheap as Daylight.

Everybody can have good light; PURE, STEADY INCANDESCENT. BRIGHTER than ELECTRICITY or GAS, CHEAPER and SAFER than KEROSENE.

The one reliable lamp that is always right and ready for use, never out of order, and will be just as good in 10 years from now.

Portable and convenient. ABSOLUTELY SAFE. Anybody can run them. One quart filling gasoline burns 18 hours requiring no attention. No wick, smell or smoke.

More Brilliants used than all the others combined. Accepted and approved by the Insurance Companies.

Money saved by their use will soon pay first cost

We are the sole owners and manufacturers of the Brilliant and have made lamps 35 years. Write for illustrations and prices. Agents Wanted.

## BRILLIANT GAS LAMP CO.,

## WINSLOW'S ANKLE BRACE 1900.

Patented December 17, 1895.

The only perfect Ankle Support made.

Can be attached to any skate.

We desire to call your attention to Winslow's Ankle Brace. It can be attached to any skate. It is made of steel, handsomely nickel plated, with a rib running through the center which strengthens the brace and makes it light, strong and durable. They are trimmed with the best quality Russet Grain Leather.

There have been many attempts at making an Ankle Brace, but this is the only good one ever offered to the public.

Four years have proved it to be a splendid article. Each pair in a box.

PRICE  
75C.  
PER PAIR.

## Winslow's Double Runner Skate.

This skate is especially adapted for children learning to skate, is strapped and ready for use. The runners are so wide apart that a child can stand on them with perfect ease. They are adjustable and can be made from a 6 inch to a 9 inch skate by simply adjusting the thumb screw.

PRICE, 50 cts. PER PAIR.

THE ABOVE SPECIALTIES ARE MANUFACTURED BY

**The Samuel Winslow Skate Manufacturing Company, Worcester, Mass.**

# A BUILDING'S CROWNING GLORY IS ITS ROOF

# P & B RUBEROID ROOFING

Is a "crowning glory" to any building. And it isn't a  
fleeting glory either! It is always *there!* Unlike its tar-  
and-paper or asphaltum imitators, it won't rot out or dry  
out. Its backbone is the best, strongest felt, specially pre-  
pared to resist weather, water, heat, steam, acids, gases,  
alkalies, etc., and *we can prove* that it will outlast any roof-  
ing made. Extremes of temperature will not affect it. It  
is clean and easily applied, tasteless and odorless. We'd  
like to send you samples.

**THE STANDARD PAINT COMPANY,**  
85-87 John St., NEW YORK.

# HARDWARE

Standard Tool Co., Cleveland, Ohio, and 94 Reade Street, New York, distributes as a special size postal card a handsomely printed card advertising on one side their special lines of goods very graphically laid out showing a number of their leading styles of goods in a manner that will recommend their adoption not only by the trade, but also by such productive plants in which these appliances would be found to possess an additional field of usefulness.

George Wright, 121 Fulton Street, New York, has in contemplation the publishing of an illustrated catalogue, which will bear the title of "America's Greatest Manufacturers." The model upon which this work will be founded will be the similar volume published in England recently, entitled "Britain's Greatest Manufacturers." It is his intention after publishing the work to distribute it gratis among the leading concerns who will be interested in the contents in all the principal cities of the world. It is intended that the book, being designed for home as well as foreign markets, will include the metal and engineering trades, and be filled with illustrations of manufacturing plants, their various products, etc., which will guarantee its preservation and frequent reference.

Joseph H. Williamson, who for nearly eighteen years has been the business manager of the Manufacturers' Advertising Bureau, New York City, makes the announcement that he has severed his relationship with that company, to connect himself with the old established Viennot Advertising Agency, 524 Walnut Street, Philadelphia, as its business manager, in the place of James A. Thompson, resigned. Mr. Williamson, expressing his appreciation of the uniform courtesy extended to him by his many friends in the trade paper and general advertising field in the past, states that he will be glad to welcome them at any time at his new address, either at the office in Philadelphia, or at the New York office of the Viennot Agency, 127 Duane Street, Graham Building.

The Voorhees Rubber Mfg. Co., of Jersey City, N. J., have just completed and are now occupying a large addition to their original plant, consisting of a new building 50x150 feet, of brick construction, four stories in height, and possessing all that is possible under the improved modern mill construction. The building is equipped with the latest improved machinery, including new engines, hydraulic presses, etc., that will give them much greater manufacturing capacity, and enable them more promptly than ever to turn out their orders. It is estimated that this addition to the facilities enjoyed by the company will more than double its previous capacity.

The Meilink Mfg. Co., Toledo, Ohio, are now occupying their new plant on Jackson Avenue, Shepard and Eleventh Streets, covering 25,000 square feet of floor space, and arranged in five departments enumerated as follows: Tool, machine, blacksmith, plating, enamel and lacquer department. The plant is equipped completely in the most modern way for handling fine machine work and all kinds of metal-plating, lacquer and enamel finishes. It is especially equipped to contract the manufacture of any article made of metal to be delivered ready for the market. Correspondence on this branch of the business particularly is requested by the company.

The regular monthly meeting of the New England Hardware Dealers' Association was held on Wednesday, November 14, at the United States Hotel, Boston. The social features of the monthly meetings were well sustained on this occasion, and after the usual dinner, Robert Luce, of Somerville, was introduced by President Burditt, who delivered an address to the Association upon the topic of, "Taxation Problems." The address was listened to with considerable interest, close attention being given to the information conveyed, and at its conclusion, on motion of A. S. Morss, a vote of thanks was given Mr. Luce for his entertaining address. It is the intention that the next regular December meeting will be devoted to their Annual Ladies' Night, which is one of the most agreeable functions of the organization. A committee, having the arrangements in charge, consists of E. J. Neale, A. H. Decatur, H. W. Colton, E. M. Richardson, with the President and Secretary ex-officio members.

Brauer Bros., St. Louis, Mo., whose advertisement of a manufacturing to that one specialty. They are large manufacturers as well of leather sporting goods specialties and novelties, including in this particular line of wares pistol holsters, cartridge and money belts, gun cases, footballs, striking bags, etc.

Goodell Co., Antrim, N. H., have prepared a very handsome support will be found on page 6, do not confine their some and attractive Card Hanger, having reference to the Cahoon Seed Sower, which is one of their popular specialties. It is handsomely embossed in gold and colors, and would, no doubt, be welcomed by all who received it. The Cahoon Seed Sower captured first honors, silver medal and diploma, at the National Export Exposition in Philadelphia, which was as high an honor as could be paid to any similar exhibit. The manufacturers refer to this with pride, as the award, showing that the high quality of material and workmanship and adaptability to purpose, which are the distinguishing features of this seed sower, were appreciated by those most competent to judge.

Ogden Mfg. Co., Newark, N. J., have recently distributed to the trade a very handsome hanger, intended to promote the sale of the Ogden Automatically Regulated Door Check and Spring. The entire design, door spring and lettering, is embossed in black and gold, making a very attractive card, and will, no doubt, be found advantageous in calling attention to this extremely useful specialty.

E. E. Perry, formerly representing Iver Johnson's Arms and Cycle Works, and very popular with his trade in the territory traveled by him, has connected himself with the Hopkins & Allen Arms Co., Norwich, Conn., and will hereafter represent them on the road. Mr. Perry, as the industrious representative of this important house, will, beyond doubt, give a good report of himself, and receive the customary reward of successful endeavor in extensive orders.

B. B. Tobie, Hill, N. H., dealing in general merchandise, desires to add to his stock a profitable line of Hardware suitable for village and farming trade, but prefers not to have any article in his stock that retails in excess of \$2. Never having handled Hardware, he wishes the most desirable line of goods to popularize this addition to his general stock.

# HARDWARE

VOL. XXII

NOVEMBER 25, 1900.

NO. 4.

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade. Published the 10th and 25th of each month, by the  
HARDWARE PUBLISHING CO., No. 275 BROADWAY, NEW YORK.

Subscription, \$1.00 per year.

Subscription, Foreign, \$1.50 per year.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

The office of the Hardware Publishing Company has been removed to Broadway Chambers, Nos. 273-277 Broadway, New York.

## Editorial Trade Review.

The convention held at Richmond last week in such a successful manner has engaged the attention of the leaders in the business during the fortnight just past. It proved to be of the most enjoyable character, and was participated in by a larger number of delegates and guests among the manufacturers than any previous gathering of merchants embraced in the membership of this growing body of trade leaders. The increasing influence of this dignified body in their relations with the manufacturers, their harmony in the propagation of industrial methods as to the distribution of the vast product through regular channels, the discussion of practical ways and means by which the interests of all engaged in industrial

efforts shall be protected, fostered and encouraged have proved so worthy of achievement that in few departments of our country's important industrial production is so much conservatism shown as in the relations existing between the maker and the distributor of Hardware.

We no longer hear entertained discussions as to the utility of the jobber and his commercial continuance. He has received the deserved recognition of the manufacturer in every field of Hardware's increasing greatness, and is regarded as the strong right arm of the manufacturer, his sword and shield in the warfare of industrial activity, and his future relative position in the commercial world is steadfast, safe and sure.

We regret the early hour we are compelled to go to press precludes a more complete report of the proceedings of the convention.

Business is reported from the trade centres as being in good condition as to volume of traffic and conditions of collections. A much more active movement is felt in the regular channels of trade than the continued mild weather would seem to make possible; but recognized wants that must affect demand at a little later date are being anticipated by the dealer, and a satisfactory state of the market follows naturally.

Quotations are much more conservative in tone than prevailed a month ago; several lines of products, notably in Heavy Hardware, continue to advance slightly with the increasing number of orders that are being entertained and booked ahead. The makers are more inclined to stiffen prices and give no evidence of weakness, as the order books show indications of trade confidence. Stocks are light, however, in almost every line, the approaching inventory period making buyers cautious as to quantities, the desire being to keep within the range of present requirements as nearly as possible. It is to be hoped the present favorable conditions of the buying market will not be disrupted by a sustained effort to again advance prices for a Spring market. A disposition is shown in some quarters of a belief since Election that, with four years ahead of us of prosperous conditions, some of the experiments of 1899 might again be hazarded. Any such programme could only result in an increasing competition; the large amounts of capital lying idle or enjoying but limited interest would readily be drawn into enterprises that would jeopardize existing security.

The export business which would suffer under advancing conditions is at present of such an optimistic character that we feel all the parts of the known commercial centres in foreign countries are ours as soon as we are prepared to supply the demand already open to our competition. We have seen our productive facilities expand in such a promising manner during the past two years that we need the foreign markets to provide for a growing output which the more reflective buyer for home consumption can give up to a conservative consideration, backed by an intelligent confidence.

Hopkins & Allen Arms Co., Norwich, Conn., who recently purchased the plant, business and good will of the Forehand Arms Co., Worcester, Mass., announce that their new factory, now in course of erection in Norwich, they have every reason to believe, will be in operation by January, 1901. It is the company's intention to manufacture a most complete line of double and single guns, rifles and revolvers, a catalogue of which is already in preparation, and will, upon request, be sent to any dealer desiring the same.

### Manning, Maxwell & Moore's New Catalogue.

Manning, Maxwell & Moore, 85-89 Liberty Street, New York, have recently published one of the most important catalogues of Metal and Wood-Working Machine Tools and Attachments which has come to our notice. They have been noted for years for the compilation of the most complete catalogue, having reference to the lines of goods which they handle, of any railway and machinist's tool supply house of the United States. They have a specially organized catalogue department, and great care and attention is given to the descriptive part of every catalogue they issue. The descriptions are thorough and complete, and leave but little to be asked for by the dealer or consumer desiring the articles illustrated. The catalogue under consideration is printed on excellent paper, consists of upward of 700 pages of Imperial quarto size, and is bound in a substantial and convenient manner for the use of the trade. It is devoted to the illustration and description of their metal and wood-working machine tools and their attachments only. The firm state that owing to the largely increased scope of their business, they have deemed it advisable to separate the metal and wood-working machine tools and their appliances from the general supplies. In the previous catalogues these two large divisions of their business have been combined. This makes it necessary for an additional catalogue to be prepared covering the large and important lines that were omitted in this. This is being done, and they expect in a few months to add a catalogue, completely illustrated, of Railway, Steamship, Machinists', Mine and Contractors' Tool Supplies. In the catalogue before us, they have followed the same general method previously adopted, of designating the articles by figure numbers. This was one of the best features in all their previous catalogues, as it enables the trade desiring anything therein illustrated and described, in transmitting their orders or inquiries, to simplify matters by referring only to the figure numbers. This catalogue is also supplied with a code, by the use of which telegraphic or cable communications can be greatly condensed, and the expense of such transmission largely economized. It would take several pages of our paper to describe in detail the contents of the large and interesting catalogue before us, but it is designed in all particulars to enable specifications, plans and estimates to be prepared for the complete equipment of shops using metal and wood-working machinery. Scarcely an article that can be included within this division of special supplies but what will be found illustrated and described in this volume.

In addition to the commodious store occupied by this well-known firm in New York City, they have three large warehouses, and all of them are filled with machinery especially prepared for prompt delivery, which in these days of rapid requirements and rush orders is a very important desideratum. In Chicago, a very complete establishment in charge of A. J. Babcock, as manager, is also maintained at 22-26 South Canal Street. This is kept stocked with a full assortment of the latest improved machine tools for quick delivery. They also have an office at 1005 Park Building, Pittsburgh, Pa., in charge of Robert A. Bole, manager, and a corps of able assistants; while at 1620 Williamson Building, Cleveland, Ohio, still another office is maintained, under the management of F. B. Ward. Prompt attention will be given to all inquiries in connection with the furnishing of such goods as are represented in this extensive volume. The facilities for furnishing everything in the line of complete shop equipment are possessed by the firm whose catalogue we are reviewing, in the fullest degree possible. Having been identified with this line of business for a great number of years, they are fully conversant with all the requirements that could possibly be demanded in connection with its thorough and complete equipment.

### The Largest Exports in the History of our Commerce.

October exports have broken all monthly records in the history of the commerce of the United States, and the ten months of 1900, ending with October, also break the record of exports for the corresponding period of preceding years and give assurance that the calendar year 1900 will show the largest exports in the history of our foreign commerce. The total exports during the month of October, as shown by the records of the Treasury Bureau of Statistics, were \$163,093,597, or practically double the exports of October, 1894, when they were \$83,653,121. The total for the ten months ending with October, 1900, is \$1,194,775,205, or practically double that of the ten months ending with October, 1894. Exports exceeded imports during the ten months ending with October by practically \$500,000,000 or, to be exact, \$499,667,936; while in the corresponding ten months of 1894 imports exceeded exports by \$96,663,369. The year 1900 will, for the first time in the history of our commerce, show an export of more than \$100,000,000 value in every month of the year, while for the first time a single month—October, 1900—passes the \$150,000,000 line, being, as already stated, \$163,093,597, against the highest preceding record of \$134,157,225, which was made in March, 1900.

Agriculture, mining and manufactures have jointly contributed to this enormous increase in our export business. The details of the tenth month of the year, October, have not yet been completed, but those for the nine months ending with September show that agricultural exports are \$50,000,000 greater in 1900 than in 1899; manufactures, \$60,000,000 greater; products of the mine \$7,000,000 in excess of the corresponding months of the preceding year, and products of the forest \$5,000,000 greater than in the nine months of 1899. It is especially in raw cotton and manufactured iron and steel, however, that the greatest growth is shown. Exports of cotton in the single month of October amounted to over \$80,000,000, against \$28,000,000 in October, 1899; \$30,000,000 in October, 1898, and \$32,000,000 in October, 1897. Manufactures of iron and steel show for the nine months, ending with September (October details not yet being available), \$97,313,060, against \$76,569,205 in the corresponding months of 1899, \$59,990,665 in the corresponding months of 1898, and \$45,693,384 in the corresponding months of 1897, having thus more than doubled in three years' time.

The following table shows the exports in each month of the year 1900, comparing the same with those of the corresponding months of 1894:

| Exports from<br>United States. | 1894.<br>Dollars. | 1900.<br>Dollars. |
|--------------------------------|-------------------|-------------------|
| January.....                   | 85,940,226        | 117,597,158       |
| February.....                  | 65,175,331        | 119,426,985       |
| March.....                     | 70,640,839        | 134,157,225       |
| April.....                     | 64,124,812        | 118,772,580       |
| May.....                       | 61,043,583        | 113,427,949       |
| June.....                      | 57,504,487        | 108,651,957       |
| July.....                      | 52,614,176        | 100,441,793       |
| August.....                    | 60,776,147        | 103,576,654       |
| September.....                 | 58,798,675        | 115,629,417       |
| October.....                   | 83,653,121        | 163,093,597       |

The heaviest railroad bridge in the world is now being built by the Carnegie Company for its own private use across the Monongahela River, between the Braddock and Homestead work, six miles above Pittsburgh. The company has already two big bridges of its own over the same river, and the third is made necessary by its constantly increasing business. The bridge will be used for the conveyance of iron ore, coke, limestone and hot metal from the four blast furnaces of the company. The main span of the bridge will be 500 feet long and the bridge 2,300 feet long. It will have a sidewalk and two railroad tracks. One of the tracks will be for hot metal cars and the other for iron ore trains. The floor of the bridge will be of firebrick, to prevent damage to river craft in case of accident to the cars containing the molten lead. The bridge will contain some of the heaviest pieces of steel ever put into a bridge.

## LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law,  
No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 277 Broadway, New York City.

**QUESTION:** Some time ago a man who has had a grudge against me for many years, had me arrested on a charge which he brought against me. There was absolutely no foundation for such charge, and, I believe, he had me arrested just to bring disgrace upon me. I was, of course, discharged by the Magistrate before whom I was brought, and the man severely reprimanded for arresting a person upon such an insufficient ground. Have I a right to sue this man for damages?

**REPLY:** We are of the opinion, from the facts as you state them, that you have a cause of action for malicious prosecution against the man who instituted this proceeding against you. In order to sustain this action, it is necessary to allege and prove, first, that the defendant instituted the criminal prosecution or civil action, which is complained of as unjustifiable; second, that this was done through malice; third, without probable cause, and fourth, that such prosecution has terminated in favor of the now plaintiff, if from its nature it was capable of such a termination. The gist of the proof is to establish want of probable cause to justify the previous prosecution, and this probable cause has been defined as a reasonable suspicion supported by circumstances sufficient to warrant a cautious man in the belief that the person accused is guilty of the offense charged.

**QUESTION:** I am about to leave for Cuba, to be gone for two or three years, and perhaps for a longer time. I have considerable property in New York, and I wish to leave some one to manage it. The person I desire to leave in control is my brother-in-law and a man in whom I have the utmost confidence, and desire to give him absolute authority to conduct my affairs as he thinks best. A notary public has offered to draw up a power of attorney for me, and has stated that this instrument is necessary. Kindly inform me what is the best means of accomplishing what I desire?

**REPLY:** The usual method is, as the notary has stated to you, to have a power of attorney drawn, giving the person whom you desire to control your property full power to do whatever you wish him to do. Unless this notary is a lawyer, we would advise you not to allow him to draw the power of attorney. Although the instrument is a simple one, many have come to our notice drawn by notaries public which have been utterly inefficient for the purpose for which they were intended. A notary would probably charge you about a dollar for his services; a lawyer would probably charge you from three to five; but we believe if it is worth while to have the instrument drawn at all you would desire to have it drawn properly, and we would recommend that you adopt the course suggested.

**QUESTION:** For some time past I have been in very poor health, and should like to know how I had best protect the interests of my two children, both of whom are under the age of fourteen years. I am a widower and have some real estate in New York, where I have lived for many years. I have also an insurance policy on my life, made payable to my estate. Under these circumstances would you advise me to make a will or not? I desire to have my two children receive all my property, and to be cared for in a proper manner.

**REPLY:** Under the circumstances we consider that there are very strong reasons for your making a will. It is generally wiser and safer for a man to make a will rather than leave his property to be distributed under the statutes of the State where he lives, or where his real property is situated; but there are special reasons for so doing in the case before us. Before your children can receive any property, it is necessary to have a guardian appointed for them. This you may do by your will, selecting a proper and suitable person to act for them. Should you leave no will, the court

would appoint a guardian. We would, therefore, advise you to make a will leaving all your property as you desire, to your two children. Under this will you should name a person in whom you have confidence as the guardian of the persons and estate of your children. It would also be well to name the same person as the executor of your will, and we would recommend your giving your executor power to sell all your real estate, as without this power a partition suit would be necessary before a distribution of your real estate would be effected. You should consult a lawyer personally and go over the matter carefully with him.

**QUESTION:** Some time ago I purchased a quantity of articles from an agent who informed me that the goods were patented. I sold a quantity of goods, and soon after received notice from another house that the goods in question were not patented, but were an infringement upon certain patents which they held. I admitted that I had sold a quantity of goods and they said that unless I paid them \$100 they would sue me. If I decide to pay the \$100, how should I protect myself from being sued by this concern?

**REPLY:** There have been many instances, such as you describe, and where it can be proved beyond question that you have been selling goods which infringe a valid patent, perhaps the wisest and safest course is to settle the matter. If you decide to settle the case, you should insist upon a general release from the concern in question, by which they release you from any and all claims which they may have against you. This general release should be signed and acknowledged by a proper member of the firm or corporation in question, and would be a perfect defense to any action brought against you by this concern for selling these goods or for any act done before the execution of the general release.

## C. P. Huntington's Secret of Success.

"The great secret of success is laying by a nest egg and adding to your little store—never spending more than you make."

"A young man should command what he is worth, always keeping his eyes open to better himself."

"Many young men make a mistake in going to college and losing the most important part of their lives in filling themselves with knowledge of other men's deeds, of no practical use to the commercial world."

"I do not think the life of one who has accumulated a hundred millions, more or less, although interesting, is inspiring."

"No one can follow in the footsteps of another. He must work out his own destiny."

"If you observe the rules of honesty, integrity and economy and fear God, you have just as good a chance as any man that may be cited."

"Never allow any social obligation to interfere with a business engagement."

"I never cared a cent what any human being said or thought about my actions, so long as I was satisfied."

"Lots of sorrow has been caused by men meddling at a game regarding which they knew nothing with fellows who did."

"False pride is an enormous obstacle."

"Never worry about to-morrow. To-day is the all important issue."

"I believe in a young man marrying early in life, if he can marry a sensible girl, who is willing to do her own housework."

"Don't watch the clock. The man who does probably would never be missed by his employer."

"So you wish to take my daughter away from me," remarked her doting father.

"Well—ah—that wasn't just exactly my thought," stammered the nervous young suitor; "my folks could perhaps spare me with fewer pangs."—*Ex.*

## ITEMS OF INTEREST FROM EVERYWHERE.

In the rubber forests of Para one laborer disposes of 100 trees in seven months, securing from 400 to 800 kilogrammes of rubber, of which he gets half from his employer.

The stamp canceling machine in use in the post offices can handle from 40,000 to 50,000 letters an hour. New machines are being tested with a capacity three times as great.

Out of 17,000,000 pieces of registered mail handled annually in the United States the loss has been one-thousandth of 1 per cent., and in the transmissions of ordinary letters it is only seven-thousandths of 1 per cent.

An English tradesman, while at a seaside resort, noticed how eagerly visitors from town picked up shells. At a small expense he bought a wagon load of mussel shells, stamped an advertisement on each and scattered the lot along the shore.

After keeping a cylinder of gold and one of lead together for four years at about 65 degrees Fahrenheit—that is, a comparatively cold temperature—Sir W. Roberts-Austen found that the gold had slowly, but surely, made its way into or mixed with the lead.

For sail boats a new attachment allows the mast to be moved to either side of the boat as the wind shifts, a horizontal arm being pivoted at the forward end of the hull, in the outer end of which the mast is set, with a lever which allows the bar to be shifted to adjust the mast.

To enable firemen to carry a person down a ladder with both hands free a new apparatus has a heavy steel rod bent into U shape with a seat formed at the bottom of the U, hooks being provided at the top to fit over the fireman's shoulders and straps to hold the person in the saddle.

Thickly planted trees are the best protection against avalanches. The snow which has fallen in the woods cannot well shift its pace, and when the masses of snow from the slopes above dash against the timber they are unable to break through so strong a barrier, and after overturning some of the first trees their progress is arrested.

In England a lamp-post has been introduced which combines a fire hydrant, tap and fire alarm box. The hydrant can be used for fire alarm purposes, filling water carts, and for street flushing, while the small tap can be used by an individual for domestic water supply. There is a water meter and siphon at the bottom, by which the water is shut off from the hydrant, thus preventing it from freezing.

The largest part of the world's supply of platinum comes from the Ural Mountains, perhaps as much as 95 per cent. of the platinum used in the arts being found in the Russian and Siberian mines or placer deposits of that range. The metal is found in grains and nuggets in the sands of river and creek deposits and in the moraines of glaciers, and is either quite pure or in the form of an alloy with iridium or some of the allied metals of the platinum group.

The German emperor has commanded the celebration of the 700th anniversary of the first mining operations in Germany. These were begun in the Hartz Mountains, the principal minerals being silver and copper. The Emperor himself will attend the celebrations, which will take place at Hettstedt, in

Saxony, where the first mine is said to have been opened, and will also visit Eisleben, a large copper mining centre, where Martin Luther, whose father was a miner there, was born.

One of the leading authorities in bicycling matters has estimated the total output of complete wheels for the present year at 825,000. Of these 150,000 will have been made by assemblers and small makers, and 375,000 by the sixty-three strong firms independent of the trust. The exports of finished wheels are estimated by the same authority at 125,000. The rubber tire output this year, according to a rubber expert, will not exceed 1,250,000, and of these hardly more than 200,000 in all probability will be exported.

The total value at the place of production of the mineral and metal output of the United States in 1899 was \$1,211,361,861, as against \$861,751,017 in 1898. These amounts are quite unexampled in the history of the mineral industry. Of this vast sum ores and minerals contributed \$580,836,062 in 1899 and \$440,997,150 in 1898; metals, \$496,057,320 in 1899 and \$312,650,587 in 1898; secondary products, \$63,995,969 in 1899 and \$40,095,010 in 1898; while the value of metals smelted or refined from foreign material was \$70,471,540 in 1899, and \$59,008,000 in 1898.

A movement has been started in France which has for its purpose the preservation, or rather the cultivation, of the kangaroo, which has been rapidly proceeding toward extermination. Dr. Brisson, a French surgeon, says that there is likely soon to be an exceptional demand for the animals, in consequence of the success attending the use of kangaroo tendon in the hospitals. It has been employed in scores of instances to tie up fractured bones of a man's leg, in order that he may use his knees while the bones are knitting together.

The production of iron in the United States for the year 1899, according to the annual report of the United States Geological Survey, which has just been compiled by John Birkinbine, amounted to 24,683,173 long tons, which was 5,249,997 tons, or 27 per cent., in excess of the previous maximum, produced in 1898. The records for 1898 and 1899 represent the largest output of iron ore mined in any country in one year, the nearest approach being a total of 13,062,040 tons mined in 1880 in England. Twenty-four States contributed to this total, Michigan leading with 9,146,157 tons, and Minnesota taking second place with 8,161,289 tons. Alabama had third place with 1,009,327 tons.

A new switch tower is being built in the yards of the New York Central Railroad in this city that in several respects is the most advanced in its mechanical and other arrangements of any in the country. One feature is especially novel. In the lower story ordinary white window glass is used, but the upper story, where the men are mainly employed, has green window glass. The green window glass is a great protection to the eyes of the employes from the sun. As to the superiority of this green glass over the metal awning always used heretofore it is said to be as great an improvement as a steam railway is over a horse. This switch house will contain 176 levers, which operate the switches by compressed air. These pneumatic switches will do away entirely with general switchmen about the yard, the levers controlling every switch in the yard.

### The "Queen" Ice Cream Freezer.

The Sam'l C. Tatum Co., of Cincinnati, Ohio, in their new catalogue of Ice Cream Freezers and Hardware Specialties just issued, have included in the contents a very attractive picture of a four-year-old boy turning the crank of a

THE "QUEEN" ICE CREAM FREEZER.

"Queen" freezer. The illustration, which is taken from an actual photograph, from a studio in Columbus, Ohio, shows the Freezer, as will be noticed, set up on a large rock in a local back yard, and fully bears out the claim of the manufacturers as to the ease with which the Freezer is operated; no straps or other such contrivances being necessary to hold the Freezer during the operation. The manufacturers report having had a most successful demand for their Freezers during the year, and having already booked many orders for 1901.

### "Holland Beauty" Coffee Mill.

The Bronson-Walton Co., Cleveland, Ohio, John H. Graham & Co., 113 Chambers Street, New York, agents, are

"HOLLAND BEAUTY" COFFEE MILL.

placing upon the market the "Holland Beauty" Coffee Mill, an illustration of which we present herewith. It is constructed entirely of metal, with the exception of the board, by the aid of which it is fastened against the wall when in use. It is constructed in a durable manner from first-class material, and possesses a mechanism readily kept in order and susceptible of close adjustment for grinding the coffee in various grades from fine to coarse. The canister part of the mill is calculated to hold one pound of coffee, and the manufacturers argue that being kept in the coffee mill in this metal can, prevents any loss of aroma or other of the coffee's good qualities, and is in readiness to be ground without the usual details attending preparation. They claim this saving of the aroma as the mill's most noted characteristic.

### Machinists' or Jewelers' Special Tool Chests.

C. E. Jennings & Co., 101 Reade Street, New York, manufacturers of mechanics' tools, are large manufacturers of tool chests especially designed for various trades and lines of business requiring strength, security and general completeness in the arrangement. We give an illustration herewith of a chest especially made for a high grade outfit for machinists' or jewelers' use. It is catalogued as No. 40 special. Made of selected antique quartered oak or black walnut, handsomely finished. Each Chest is provided with a Yale pattern lock and two keys, nickel-plated drawer pulls, and a patent device for automatically locking all the drawers at once. They have nickel-plated outside corner irons, and each has a panelled lid with a secret compartment for private papers. The following are the list prices:

No. 40. Special. Quartered Oak, with 4 Drawers, price each, \$12.00.

No. 4W. Special. Black Walnut, with 4 Drawers, price each, \$12.00.

The outside dimensions of these Chests are as follows:

18½ inches long by 12¾ inches wide by 11½ inches high.

The following are the inside dimensions:

Receptacle under lid, 16 inches long by 9¾ inches wide by 3¾ inches deep.

First drawer, 15 inches long by 8¾ inches wide by ¾ inch deep.

MACHINISTS' OR JEWELERS' SPECIAL TOOL CHEST.

Second drawer, 15 inches long by 8¾ inches wide by ¾ inch deep.

Third drawer, 15 inches long by 8¾ inches wide by ¾ inch deep.

Fourth drawer, 15 inches long by 8¾ inches wide by 1¾ inches deep.

Space under the bottom drawer, 1 inch wide.

"What was your father whipping you for last night?" asked one small boy of another.

"Oh!" replied the other, "we had an argument about my Sunday School lesson, and he was proving to me that the whale actually did swallow Jonah."—*Ex.*

### Catalogue House Competition.

An interesting article on catalogue house competition appears in a recent issue of *Trade*, of Detroit, Mich. A table is printed showing the prices of fourteen articles, including tools, ammunition and guns, which are quoted a retailer by a leading Hardware jobber of Detroit, and the price for the same goods quoted the consumer in a recent catalogue issued by a Chicago catalogue house. The catalogue prices average only about 21-2 per cent. higher than the jobber's price to the retail dealer. Commenting upon that showing *Trade* says:

"It requires no great stretch of the imagination to see that either the jobber or the retailer must go, and go much sooner than most people recognize, if the present condition of affairs is to continue. The catalogue house is a splendid example of up-to-date cash-sale, quantity-purchasing business and has simply cut out one of the profits between production and consumption.

"It is here to stay, and the sooner jobbers and retailers realize this, the easier it will be for them to adjust their business to meet this nineteenth century competition, which, like a snowball, the bigger it grows the faster it grows. It is already evident that no retailer can do business on these margins, even if he gets cash in advance with every sale. What, then, is the secret of the catalogue concerns' ability to undersell even the jobber in some instances? Is it some new panacea for mercantile ills which these shrewd concerns have discovered, and which they monopolize? Assuredly not, but is simply the result of keen discriminating, quantity-buying for cash, which gives the buyer, if he is 'on to his job,' the short price every time, and the cutting out of one profit in the distribution of merchandise.

"The remedy for this condition is, in our judgment, extremely simple. There are in the United States probably 22,000 retail dealers in Hardware. Let us suppose that each of these dealers handles, roughly speaking, in the vicinity of \$40 worth of these principal staples each year. This, of course, is far from correct, for the quantity varies greatly in different localities, and the total shown by these figures would considerably exceed the total output of some factories, but for illustration and in the absence of more definite statistics, it must suffice. The retail Hardware trade in the United States is probably still marketing from 75 to 90 per cent. of the principal Hardware staples, while the catalogue house disposes of from 10 to 25 per cent.

"Twenty-five years ago the figures were probably, dealer 90 to 98 per cent., mail order houses 2 to 10 per cent. Another decade hence the figures will surely be much nearer half and half than those existing to-day. Every dollar of this money in catalogue house business is at the expense of the retailer.

"The remedy, based upon the above estimates of the relative value of the retail trade, as compared to that of the catalogue house and department store, which, while purely imaginative, is sufficiently correct to show that the power to remedy this great and growing menace to the business of the retailer, still rests with him. That power, which he cannot exercise individually, but which must be exerted through the medium of association with his fellow merchants, is the ability to say to the manufacturer: 'You cannot and must not sell the catalogue houses and department stores, which are steadily undermining my business, and at the same time sell me!' Nearly every State has its State organization of Hardware dealers, of grocers and of those in other lines. The Hardwaremen possess a national organization. If one-fourth of the dealers in this line in the various States were members of a State Association of their own tradesmen, and if these State Associations were merged and welded into a compact whole by affiliation, the remedy could be applied at once; and, indeed, the day when this can be done effectively is rapidly approaching, for the need of efficient organization

is growing apace, and slowly, but surely, the strength of the Interstate Retail Hardware Dealers' Association is developing."

### Claims and Returned Goods.

The claim department of a large house runs against some queer streaks of human nature. The head of this department who decides on the disposition of each case, must be a man of good judgment and equable temper. He must, of course, cheerfully correct errors and allow just claims, and he must at the same time be firm in rejecting unjust claims.

We have a great many customers who rarely have a claim to make, in fact they go on buying from month to month and year to year without a particle of trouble on either side, and we begin to congratulate ourselves on the careful attention of our clerks and think we have eradicated carelessness and errors in all our departments. But just then we strike a streak of claims which shows that either we were mistaken about our employes or that somebody else has been careless.

What are the causes of these claims? We will try to answer:

Careless ordering is one. A man knows what he wants but does not write it so that others can understand. The other day a man ordered tin roofing nails. He wanted nails for putting on tin roofing. He should have simply said: Wire roofing or cut roofing nails—as it was he got *tinned* roofing nails and they had to be returned. Another party ordered several bars of steel 3—2" x 3—2". This was a puzzle. We thought it meant 3 1-2 inch by 3 1-2 inch; but as this is an unusual size we wrote for further light. Well he wanted 1 1-2 inch square and thought we were stupid not to understand that three halves by three halves was the same thing. Another cause is not having an understanding as to prices. We always bill goods at the best price ruling at the time, and persons who expect lower prices should name it in their order. Then we can accept or refuse the order before shipping expenses are incurred.

There are a few people who seem to order simply for the fun of returning the goods. There are some who keep seasonable goods until it grows late in season and sale seems doubtful and then return them. There are some who buy goods at a price and get them according to order, but imagining that a neighbor has a better price take it off in remitting. There are some who always find a shortage in goods received. Some who always find something wrong with goods which requires an allowance.

We employ the best men we can find for our work and give careful personal supervision of all business intrusted to us, so as to avoid all errors—but of course some will creep in. In such cases we cheerfully correct them and make matters right. We must, however, in justice to ourselves, refuse to allow claims that are unjust, and refuse to accept goods returned without good cause and without the buyer having first written us regarding them.

We trust none of our good friends will take offense at our plain speaking. We are simply giving you a bit of our experience. Don't think that we are trying to avoid the consequences of mistakes we *do* make. Far from it. But we want to be just—just to ourselves as well as to our customers and only ask you to remember "both sides" if you ever have occasion to make a claim or report a shortage.

LOGAN-GREGG HARDWARE Co., in *Hardware Hints*.

A certain farmer living east of Osage City, and not noted for his resemblance to Apollo, has a son of seven years who possesses more wit than wisdom and reverence. One day recently a stranger came to the farm, and seeing the lad asked: "Sonny, where is your father?" "In the pig pen," was the reply. "In the pig pen? Thanks." And as the man moved in the direction indicated the boy shouted: "I say! you will know him 'cause he has a hat on."—*Kansas Star*.

### Just For Clerks.

Do not start a store until you are situated so you can own it and have a little surplus besides, says *Storekeeper*. There are plenty of stores in the city, and also in the country, which are started by ambitious and energetic young men who could make good salaries as clerks; and these are often started with limited capital, and with the backing of some wholesale house. The young man works all the time, eats and sleeps in the store, has no nights off. His life is a constant grind; each month finds him a little more in debt, and, finally, the wholesale house takes his all—its own goods, the young man's money and what goods he has bought from some one else. It all goes! There is no friendship in a chattel mortgage! Then he is ashamed to go home, and so he stays in the city and works for less than he could get at his own home with all its pleasant surroundings.

To change the subject now, study to become a good salesman. Your knowledge of goods is of no use unless you can sell them.

Be a "good fellow"; be careful at all times (even if your head does ache) but do not let people—especially young people—get too familiar with you, or they will make the store a loafing place. Never trust them for goods without consulting your employer.

Do not forget that you are not accommodating a customer by waiting on him. It is the customer who is accommodating you. It is of no use to advertise for trade if the customer is not well treated on his first visit; if he wants what is not in stock, use every effort to obtain it, and, no matter how small the order is, do not keep the customer waiting for it, but send it to him. People are continually changing from one store to another, and, if they do not get the proper attention from you, they will go where they can get it.

No clerk should take the responsibility of "talking back" to a customer. If he ever owns a store, he will think twice before losing a sale or a customer. If your employer's business is sufficient to pay a good salary to a clerk, it is to your interest to increase it, rather than diminish it by surly manners or inattention to customers. Your employer may notice these things more than you think.

### Managing the Good But Slow Customer.

To the business man with outstanding accounts the question of how to deal with the class of customer described in the title of this article is a constant and perplexing puzzle. For all other classes of debtors he has his methods of treatment. The customer whose payments are prompt and on time of course affords no trouble whatsoever. For the bad accounts, while the chances of getting what is due to him are slight, at best the merchant at least has a course of action well defined. He has merely to put the account into the hands of his attorney or of a collection agency, as the case may be. The "good, but slow customer," however, is not to be thus summarily dealt with. His case is one demanding the exercise of the utmost amount of ingenuity and tact. He must not be approached in an abrupt or offensive way or he is liable to flare up and withdraw his trade. The self-consciousness that he is perfectly good will render him exceedingly susceptible to taking offense. To let him alone altogether, however, is equally unsatisfactory, inasmuch as he never will volunteer to pay unless his memory is somehow jogged along. The merchant, therefore, in his treatment of such a customer, finds himself in a very difficult position.

Some merchants, appreciating these difficulties, prefer not to have such customers on their books at all. Others, deeming that they cannot afford to display such independence, try various methods of coping with this difficulty. Some business men instruct their collectors, when calling on such a customer as above described, to appeal to his sympathies by informing him that the firm is in need of all the money it can raise. This step, however, is not advisable when it is

taken into consideration that such a statement, however groundlessly made, is liable to spread abroad and place the firm under suspicion, or at least in a bad light. Other merchants again try to persuade the slow, but good customer, to give them a note, while still others declare that the very suggestion of such a course would lose for them their customer and their account, and advise, where possible, that the debt, or part of, be taken out in trade, and in that manner the debtor may be successfully reminded that his account is not "squared."

Still another class of merchants favor the demanding of payment on instalments, deeming that the mere demand will cause the customer to awaken to the fact of his indebtedness and forward a check in full immediately. A business man of considerable experience in this direction has a thoroughly systematic method of dealing with the good but slow customer, and his advice is certainly worthy of note. Therefore I append what he says:

He advises, in the first place, that a draft be made upon the customer. If the draft comes back marked unpaid there are generally a few words marked on the back explaining the reason for non-payment. These excuses take such forms as "not due" or "amount incorrect," or any plausible reason for not honoring the draft that may suggest itself to the mind of the man drawn upon at the time the draft is presented. In the event of such an excuse being given, a letter is then sent to the tardy customer, expressing, in mild terms the greatest surprise that the draft was not honored, refuting the reasons given for failure to honor and expressing the intention to again make draft a few days hence, and not failing to end up with a desire for "further valued patronage."

A second draft is then made and should this also come back, not honored, a quite severe letter is dispatched expressing the writer's great surprise that the account, long past due, has not been paid, gently but firmly intimating that most drastic measures must be taken, if payment is not made at once, or giving the debtor a short extension, and insisting upon the honoring of the draft that will then be made. At the same time an appeal is made to the sense of justice of the customer, and he is assured that the taking of stringent methods will be a matter of great regret to the merchant. A hope is expressed that the customer will appreciate the position in which the creditor finds himself, and that the relation of merchant and customer in the future may be of the most pleasant and cordial nature.

In the majority of instances a really good customer will not let the matter go further, but will "pay up," even though he should grumblingly request to know "whether they think he is going to run away," or if "Mr. Blank thinks he's going to fail." If, however, the next draft is not met, the account is placed in the hands of an attorney for collection, and a letter sent to the customer informing him of the action that has been taken. This invariably brings the money, providing the customer has it, and has no just reason for withholding payment. If this correspondence throughout has been managed properly, care being taken to be neither too aggressive nor too weak, even the fact that legal steps have been taken does not always mean the losing of the customer; but if the latter should happen, our merchant comforts himself with the reflection, "It matters not how good a customer may be, if he don't pay his accounts I don't want him on my books."

MYRON CONNOLLY.

John—Look here, that dollar you lent me yesterday was counterfeit.

James—Well, you said you wanted it bad.—*Ex.*

"Blowhard has a big opinion of himself."

"How big?"

"Well, he's beginning to imagine he's annoyed by camera fiends."—*Ex.*

## RECENT TRADE PUBLICATIONS.

**ACORN BRASS WORKS**, 19-23 South Jefferson Street, Chicago, Ill. Envelope size catalogue, 28 pages, printed on excellent paper and finely illustrated with half tones throughout, covering their line of "Acorn" Gasoline gas lamps which they manufacture in a large variety of styles and sizes, together with the necessary supplies appertaining to the same.

**PFLEGER MFG. CO.**, 330-338 North Wood Street, Chicago, Ill., **Allerton-Clarke Co.**, 79 Reade Street, New York, agents. Pamphlet catalogue of 24 pages, of wood and metallic Weather Strips made in large variety, and in all the various styles pertaining to this line of goods. Included in the contents are heavy and light floor scrubbers, wood and metallic window cleaners, oil-cloth binding, etc.

**E. S. HULBERT & Co.**, Bernardston, Mass. Illustrated catalogue for 1901 of the large assortment of cutlery manufactured by this well-known concern of over fifty years' standing. Oblong pamphlet catalogue, 24 pages, embracing an extensive assortment of cutlery for butchers, abattoirs, packers, marketmen, hotel and restaurant chefs, grocerymen and house-furnishing houses, covering almost everything needed in these special and distinct lines, amply illustrated and well described. It is a very convenient little book.

**NEW YORK MALLET AND HANDLE WORKS**, 452-456 East Houston Street, New York. Pamphlet catalogue of 20 pages, covering their line of caulkers', carpenters' and stone-cutters' mallets, together with tin and coppersmiths' and boiler-makers' mallets, hawsing beetles, hawsing and caulking irons, sledge, chisel and hammer handles; also cotton and bale hooks and cork-screws. This old concern are the largest makers of caulking mallets, hawsing irons, etc., whose products reach the trade. Having been in the business in the neighborhood of fifty years qualifies them to be considered headquarters from an expert standpoint of this special line of goods. Included in the contents of this catalogue, in addition to the articles mentioned, will be found such goods as gavel mallets, oyster blocks, standing fids, hickory hand fids, serving mallets and serving boards, cobble-stone and Belgian rammers, etc., etc.

**SARGENT & Co.**, 149-151 Leonard Street, New York. We have received from this well-known company samples of the literature they distribute gratuitously to their customers, exploiting their many specialties which they advertise so thoroughly. Hardware stores throughout the country handling their goods need never be at a loss for sufficient advertising stationery to distribute in order to exploit their products. In connection with the several booklets, they issue a pamphlet giving sample advertisements suitable for the columns of papers throughout the country, electrotypes for which will be furnished when required by the dealer. In this assortment is an interesting booklet catalogue exploiting the "Eclipse" Door Check and Spring, intended for wide distribution through the medium of the dealer handling these goods. The entire outfit reflects great credit upon the perfect system adopted by this house, and could be advantageously followed by others.

**SIMMONS HARDWARE CO.**, St. Louis, Mo. Catalogue 385 on Doll Carriages, children's chairs, boys' wagons, velocipedes, sleds, skates, etc., for the season of 1900-1901. Pamphlet catalogue of 76 pages in which these goods are shown and described in large variety, evidently intended to facilitate ordering by mail a class of goods that are seasonable, and on

which the dealer at the present time should keep well informed. We have also received from the **Simmons Hardware Co.** their catalogue of Fall sporting goods, which is their No. 383, being a book of over 450 pages, printed on paper that permits of a large edition being distributed, intended to foster and encourage mail orders. The contents include everything in the way of hunting goods, golf goods, foot-ball goods, striking bags and canvas goods. The contents are varied and complete, taking in everything embraced within these lines, with prices attached to all of them, and subject to a discount sheet distributed only to the trade. It is a very valuable and desirable compendium of seasonable information.

**P. & F. CORBIN**, New Britain, Conn. Catalogue of "The Corbin Lock Set in a Unit," their latest improved special line, which is illustrated and explained in the most superb manner imaginable, in a quarto catalogue of 86 pages, with an extremely artistic embossed cover in gold and colors, that will interest the dealer who receives it, from cover to cover. The superior quality of the illustrations which are used in the contents of this volume have rarely been equaled in exploiting the products of any factory, and give evidence of the great care and attention which the catalogue department of this well-known concern has bestowed upon it. It certainly reflects high credit upon the artistic taste of this well-known company. This is their first catalogue of "Corbin Lock Sets," and in it will be found all the sizes and patterns of locks and designs in ornamentation which they have made to date. The assortment affords a wide range for choice. It is the intention of the company, announced in this catalogue, to add as rapidly as possible some of the best of their stock designs to this line of lock sets, and also other new designs as produced for special requirements. It is an extremely handsome production, that a Hardwareman can take pride in possessing.

**GOODELL Co.**, Antrim, N. H., and 10 Warren Street, New York. "Catalogue A," embracing a full line of their productions, oblong in shape, 70 pages, printed on good paper and finely illustrated with wood cuts throughout. It covers in a very complete and thorough manner their line of table cutlery and butcher knives, carvers, hunting, sticking, skinning, shoe, cigar, putty, bread, cheese, steak and other knives. Dimensions are given in every case, and where two or more styles of handles are manufactured from the same pattern, the numbers of each are given under the illustration. Their handsome line of table cutlery marketed under the name of the "400" is illustrated in full. This line is a radical departure from old lines, and in many respects superior to anything which has preceded it, being entirely different in construction, more tasty in appearance, and vastly stronger and more durable, the blade being fastened into the handle with metal, which neither swells nor shrinks in cooling. The forks are of latest design, four-tined, first tinned and then nickel-plated, guaranteeing a period of service, which but few grades of table cutlery can promise. Rubber-handled knives are also shown in full variety; likewise solid bone and celluloid, solid steel, silver-plated knives and forks to match, being one of the approved specialties of the Goodell Co., are handsomely illustrated and described. Their line of carvers and steels are of the most complete character, and altogether the catalogue is gotten up with care and cannot do otherwise than impress the dealer with the desirability of handling this line.

## NEW GOODS AND SPECIALTIES.

### "Giant" Metal Transom Chains.

The Smith & Egge Mfg. Co., Bridgeport, Conn., are the manufacturers of the "Giant" Metal Sash Chain so long and popularly known to the trade, and which forms one of the salient features of a number of their specialties to which it is applied, one of which, that of Transom chains, we illus-

"GIANT" METAL TRANSOM CHAINS.

trate herewith. They are manufactured in four sizes: 10, 12, 15 and 18 inch, and present a very strong and desirable attachment to any transom that requires proper security. The Smith & Egge Co. are really the originators of this class of chain, and claim to have made and sold the first foot of a similar sash chain ever sold in the market. In fact, they are the originators of automatic machinery for making flat metal chain of this description, having been in business twenty-seven years, and without exception, are known as reliable manufacturers of meritorious specialties demanded by the trade generally, and deservedly popular.

### "Yankee" Ratchet Screw Driver.

North Bros. Mfg. Co., of Philadelphia, Pa., well-known manufacturers of popular specialties for the Hardware trade, are placing upon the market the "Yankee" Ratchet Screw Driver, which we illustrate herewith, and is marketed as their No. 11, which is introduced to the trade as an improvement on the company's No. 10 ratchet screw driver, which has already achieved considerable popularity. The adjustment of this screw driver being across, instead of in line with the length of blade, obviates, as the manufacturers claim, any possibility of changing the position of the shifter while in use. The ratchet mechanism has also been modified

inches in length, and come packed one-half dozen in a strong paper box.

### Fearn Casement Fast.

The Columbus Sash Ribbon Co., 657 West Broad Street, Columbus, Ohio, are the manufacturers of the Fearn Casement Fast, which they are placing upon the market through

FEARN CASEMENT FAST.

the Hardware trade. It is constructed for the purpose of acting as a convenient fastener on hinged cellar and attic sash, there being no other article before the trade at the present time manufactured expressly to fill this requirement. It draws the sash or door to place, even should it be sprung a quarter inch out of true; or should the door be shrunk or sagged, it would easily latch. It is applicable to the right or left hand, and can be placed either on the top or bottom, needing only two screws in applying it. They are put up conveniently packed, one set complete with screws in an envelope, one dozen sets in a neat pasteboard box, and in cases holding one gross sets, the shipping weight being 25 pounds per gross.

### Adjustable Stencil Cabinet.

S. W. Reese & Co., 160 Fulton Street, New York, are the manufacturers of Reese's Adjustable Stencil Cabinet, which is intended for the trade, by the use of which to enable them to handle this line of work. As will be noticed by reference to the cut, this cabinet contains trays in which the various sizes of stencil letters and figures are arranged in alphabetical order, with compartments for the different letters. Cabinets are made to contain from three to six trays, as may be required, so that the dealer may add this line of business inex-

"YANKEE" RATCHET SCREW DRIVER.

to some extent in order to require less room to adjust, consequently saving slightly in the size and weight of the tool, and enables it to work with less friction than the No. 10. The adjustment for right or left hand is made by pushing shifter to left or right hand end of slot. When the blade is desired to be held rigid, as in an ordinary screw driver, the shifter is placed midway. The manufacturers state that "the material and workmanship of the screw driver embody in the highest degree those characteristics which make such a tool not only desirable, but a necessity to the progressive and up-to-date mechanic." The drivers are made strong and durable, handsomely finished and thoroughly tested before leaving factory. They are made in eight sizes, from 2 to 12

pensively, or be prepared to supply the demand for almost anything required. A six-tray cabinet contains a tray for half, three-quarters, one and one and a half inch letters; one tray with the four sizes of figures as above, one tray with samples. Five hundred letters of one size, properly assorted, are contained in a tray. In order to encourage the Hardware dealer to handle this additional specialty, the manufacturers give this cabinet and samples free of charge to any dealer purchasing not less than two trays of Adjustable Stencils, containing an assortment of 500 each of three-quarters and one-inch letters, which are the two most salable sizes. A liberal discount is given to the trade from list prices, and it would seem as though this would be a very attractive little line to be added

to the usual Hardware stock, as the demand for stencils is rapidly increasing in accordance with the improved conditions of the times. The manufacturers will be pleased to furnish dealers desiring to carry this line with their Catalogue No. 9, in the 64 pages of which they give over 300 illustrations of goods in the stencil and stamp line, which they manufacture

REESE'S ADJUSTABLE STENCIL CABINET.

or carry in stock. They publish also a Catalogue No. 5, in which 64 pages are devoted exclusively to Solid Rubber Type, and Catalogue No. 10, illustrating 32 pages of Sign and Price Markers. Favorable arrangements may be made by which a large variety of samples of these goods can be furnished at a very moderate expense to the retail dealer. Reese's Adjustable Stencil Letters and Figures have been on the market over 25 years, and are now a standard article with those in the Hardware trade who have been handling them.

#### Steel Edge Nickel Silver Knife.

E. H. H. Smith, 38 Murray Street, New York, is the manufacturer of the Steel Edge Nickel Silver Knife, an illustration of which we give herewith. The knife, while apparently of solid nickel silver, both blade and handle, obviates the usual difficulty possessed by plated knives by having inserted in the lower edge and centre of the cutting part of the blade a thin, sharp strip of steel of a quality especially prepared for the purpose designed. This strip projects but slightly from the lower edge of the knife in order to form a cutting edge of steel. By this method of construction, all of the advantages of a nickel silver knife are obtained with this additional merit, that it can be made to hold an edge, making it one adapted especially for hotels and restaurants, as well as for family use. It is made in several styles, both plain and fancy, with a solid or hollow handle, as required. The illustration, which presents a cross-section view, showing the construction of the knife, illustrates a medium knife

Smith's Pat. Nickel Silver Steel Edge Knife (showing Construction).

with hollow handle, the pattern being known as the "York Rose." Mr. Smith is also the manufacturer of high-grade plated ware of the same pattern, that has become quite popular with the trade.

#### Improved Bolt and Screw Cases.

The American Bolt and Screw Case Co., of Dayton, Ohio, have been for a number of years identified with the manufacture of bolt and screw cases of the most approved construction. They have been before the Hardware trade in this connection for a long time, and their goods have been well introduced among the leading houses in the business.

But they have made a number of improvements during the few years past that make it desirable they should be known to those wishing to add to their store fixtures articles of such general utility; among these may be mentioned the fact that they are now using iron standards screwed firmly to an iron hub in the bottom, which makes the case, even when filled with goods and carrying considerable weight, perfectly true and solid in movement and easily manipulated. The tops and bottoms are double, with the grain of the wood crossed, glued and screwed together, and then braced with iron rods, binding the whole firmly in this combined form, and making it strong enough to bear three times the weight that can be put into it, and yet revolve, as referred to above, in a perfectly easy manner. In the construction of these bolt and screw cases, the best seasoned Tennessee poplar is used, being finished when completed in imitation of cherry. The fronts of the drawers are made of the best Norway pine, and, as will be noticed in the illustration herewith, the sizes which they contain are nicely printed upon them, making them in appearance certainly a most desirable appendage to Hard-

REVOLVING SCREW CASE.

ware stores. There are but few fixtures the economy of which is so apparent as in the introduction of these bolt and screw cases. Their convenience in holding in the confined space so many sizes of the articles referred to, and so systematically arranged that there is no possible mixing of screws and bolts, enables the up-to-date dealer to keep his stock in good shape, and makes it a pleasure, instead of a task, to handle these profitable goods. The drawers are all provided with stops at the extreme angle, to prevent their entire removal from the case. Each drawer is of a size that will hold the contents of a package of bolts and screws of the size and number indicated on the front of the drawer. These cases are made in several sizes, in accordance with the requirements of a large or a small stock, and upon application to the manufacturers catalogue and price list will be sent, giving full details in regard to sizes of bolts and numbers of screws which each case is intended to cover. These cases are sold by the leading jobbing Hardware dealers throughout the United States, Canada and Mexico.

#### Farmer's Choice Plier.

In addition to the numerous labor-saving devices which help to form the product of the Cronk Hanger Co., Elmira, N. Y., they have recently added the Farmer's Choice Plier, which

we illustrate herewith, and which will undoubtedly find a ready sale through the Hardware and implement trade, where an article of such utility meets with a steady demand. As shown in the cut, this plier is provided with their staple puller on one side, and a Cronk cutting plier on opposite side; also one Button pattern wire cutter and a wire-splicing clamp. As it is forged from tool steel, this handy little plier is warranted in all respects equal to their other popular goods of

when the principle and construction of the Brilliant gas lamp are such that it simply cannot do otherwise than produce perfect light and prove satisfactory in every way. There is really no way that it can get out of order or stop up, there being nothing complicated about it. Nothing but what anyone, even a child, can handle. By offering the Brilliant gas lamp to your trade, we guarantee no complaints will follow. This can be said of but few gasoline lamps, for the compli-

"FARMER'S CHOICE" PLIER.

similar character. It is made in one size, No. 10, 11 inches long. List price, \$14.

Combination Handle for "Potts" Irons.

The Enterprise Mfg. Co., of Philadelphia, Pa., U. S. A., are now offering to the trade a patented combination handle for their cold handle sad irons. It consists of their "Best Handle" with the addition of a wire side rest, which entirely obviates the use of the old style sad iron stand, at the same

FIG. 1.—SHOWING HANDLE IN POSITION.

time preventing the iron, when not in use, from becoming scratched or defaced. In Fig. 1 is shown the position of wire rest while the iron is in use, while Fig. 2 indicates the improvement given by the wire rest when iron is not in use, or when put away. All sets of "Enterprise" cold handle sad irons will be furnished, when so ordered, with the combination handle at a slight advance in price. The manufacturers desire to call attention to the fact that this handle will fit any make of Mrs. Potts' irons; also that the stretcher is made

FIG. 2.—SHOWING HANDLE AS A STAND.

of forged iron, which will not break, or in other words, it is a non-breakable handle.

The Brilliant Gas Lamp.

Many merchants are investigating the possibilities of the modern gasoline gas lamps with a view to adding a line of these goods to their stock. One of these products is the Brilliant Gas Lamp, manufactured by the Brilliant Gas Lamp Co., 42 State Street, Chicago. This company says: "There is little doubt but what our system of lighting will be universally adopted, as we consider the only drawback is the doubt raised in the minds of the people by the unsatisfactory results of complicated under-generator burners. It is rare to find one that accomplishes what is expected. Just why any one should take chances on a burner that cannot do otherwise than cause trouble after short usage, is a mystery to us,

cated nature of the burners makes trouble sure to come, and when it does, no remedy is at hand and the result is that it must be returned to its maker for correction, which frequently means the substitution of a new burner which will repeat the experience for you in a very short time. This is all very unsatisfactory and your customers are too valuable to you to take a chance on generating trouble and discord with doubtful gasoline burners. Our Brilliant gas lamps use a burner which has no needle holes or tiny tubes to clog up. It cannot cause trouble for it has the generator tube, which is above the burner. It is simple and easier to understand than the old-fashioned wick oil burner, with which every housewife is familiar. So that in putting the Brilliant gas lamp in a home you not only furnish your customers with a much better light, but a lamp easier to care for and much more simple to handle than the kerosene lamp."

"Come, now," persisted the lawyer, "are you not able to say that the defendant was in the room at the time and objected to the whole proceeding?"

"Yes, sir," savagely replied the witness. "I am able to say it, I reckon, but I'd be telling the blamedest lie you ever heard of if I did."—*Chicago Tribune*.

Mrs. O'Reagan—Did yez ever hov yer palm read, Mrs. O'Reilly?

Mrs. O'Reilly—Phwat a question, Mrs. O'Reagan! Haven't Oi had ten children an' had to spank all of thim?—*Ex.*

## THE NATIONAL HARDWARE ASSOCIATION.

The Sixth Annual Convention of the National Hardware Association of the United States has come and gone, and its 200 delegates return to their daily routine of business life, refreshed by contact with so many happy and congenial fellow-workers in an industry that calls for continued and persistent effort, love of work for work's sake, and each participant ambitious of success, the achievement of which everyone connected with the business acknowledges is accomplished only by honesty of purpose, pride of position, a community of interest, and a self-denying devotion to accomplish honorable results.

It is conceded to have been the most successful convention as to members and interest in the proceedings ever held by the National Hardware Association. The interest taken in its daily deliberations by the delegates present, many of whom enjoyed the inspiration afforded by having their wives and daughters in the hotel with them, was never excelled

feet from the marble floor by ornate iron pillars, and giving an immense open space that on pleasant days is a veritable well of sunshine. Ascending the graceful flight of marble steps, beneath magnificent arches, the finest stairway of any hotel in America and properly termed the Grand Staircase, the guest finds himself in the court dedicated to the great Virginian, in honor of whom the hotel was named, Thomas Jefferson. In the centre is placed the finest statue to the author of the Declaration of Independence ever attempted. The hotel is replete with luxurious surprises in its most perfect detail, and directly above, on the roof, is the completely equipped Convention Hall, made brilliant by hundreds of electric lights, with ample stage and seating capacity for over 1,000 persons.

In the majestic hall the assembled delegates met on Wednesday, November 21st, and we take pleasure in giving our readers as much of the proceedings of the Convention

"THE JEFFERSON," HEADQUARTERS OF CONVENTION.

in any previous gathering. The delegates themselves presented in their personnel and ability to cope with questions brought before the convention for discussion and adjudication all the attributes of a representative body of merchants from whom nothing but good results could have been anticipated.

It was a wise decision that brought the convention for its deliberations to the historic city of Richmond, and made "The Jefferson" the headquarters of the vast body of delegates and those who accompanied them, the manufacturers and their representatives forming at the present time no inconsiderable part of the throng which filled the parlors, corridors and convention hall of this magnificent hotel, which, as is truly said in a handsome brochure extolling its advantages and beauty: "Is a structure that is a fitting tribute to American architectural genius that has shed such a lustre on the closing days of the nineteenth century. Strikingly original in design, with not a single square foot of defect to mar the harmony of what is indeed a pretty picture, it is at the same time perfect in every detail. There being a difference in the grade between the two street levels, 'The Jefferson' enjoys a variety of design, and picturesque distribution of floor space, such as no other hotel in the world can boast of." One of its most striking features is the great rotunda, with its pretty gallery and glass roof, supported fifty

as we are permitted to publish, and which our early date of going to press will provide the opportunity for.

The following programme had been carefully prepared, under the direction of Secretary-Treasurer T. James Fernley, whose popular personality forms one of the engaging features of the proceedings of this deliberating body:

### THE OFFICIAL PROGRAMME.

#### OFFICERS.

President: John Bindley, Bindley Hardware Co., Pittsburgh, Pa.

First Vice-President: Richard W. Shapleigh, A. F. Shapleigh Hardware Co., St. Louis, Mo.

Second Vice-President: Brace Hayden, Dunham, Carrigan & Hayden Co., San Francisco, Cal.

Secretary-Treasurer: T. James Fernley, Philadelphia, Pa.

Executive Committee: Samuel A. Bigelow, Bigelow & Dowse Co., Boston, Mass.; R. A. Kirk, Farwell, Ozmun, Kirk & Co., St. Paul, Minn.; John C. Koch, Pritzlaff Hardware Co., Milwaukee; W. R. Belknap, W. B. Belknap & Co., Louisville; P. E. Strauss, Fitz, Dana & Co., Boston; J. D. Moore, Moore & Handley Hardware Co., Birmingham, Ala.

Entertainment Committee: W. S. Donnan, Chairman; W. S. Robertson, Richmond, Va.; Chas. H. Watkins, Richmond, Va.; John Donnan, Richmond, Va.; O. B. Barker, Lynch-

burg, Va.; A. J. Bihler, Pittsburg, Pa.; Hobart Weed, Buffalo, N. Y.

Reception Committee: Arthur B. Clarke, Chairman; Jonathan Bryan, John T. Anderson, Geo. A. Smith, T. K. Parrish, E. D. Starke, Robt. G. Reynolds, Lilburn T. Myers, W. G. Ferguson, John H. Lyons, A. T. Miller, G. B. Hobson, S. Milner Price, H. R. Wayt, Dudley McDonald, W. M. Archer, Levin Joynes. All manufacturers and their representatives are requested to serve on this committee.

#### ORDER OF BUSINESS.

Wednesday, November 21, 10 A. M.: It is requested that delegates assemble promptly, at the hour named. Manufacturers and members of the press are cordially invited to attend this session. Meeting called to order by President. Prayer by Rev. W. W. Moore, D. D. Chorus, "America." Address of welcome by Hon. Hoge Tyler, Governor of Virginia. Address extending hospitality of city by Hon. R. M. Taylor, Mayor. Address on behalf of commercial interest of Richmond by Archer Anderson, Esq., President Tredgegar Co. Roll call. Reading minutes of the 1899 convention. President's annual address. Report of Secretary-Treasurer.

Introduction of fraternal delegates from the Canadian Wholesale Hardware Association, Mr. Peleg Howland, President; Mr. William Starke, Vice-President; Mr. J. Hardy, Secretary-Treasurer.

#### COLLOCUTION.

"Is the Jobber essential as a distributor, or should Manufacturers perform this service?" F. R. Dickerson, of the American Tin Plate Company; Charles B. Adamson, of Baeder, Adamson & Co.; Hon. J. G. Niedringhaus, President of the National Enameling and Stamping Company; Robert Garland, of the Garland Chain Company; F. S. Kretzinger, of the Steel Goods Association; Henry C. Disston, of H. Disston & Sons, Inc.; J. C. Birge, of the Shovel Association.

Wednesday Noon: Session of Metal Dealers. Immediately after the morning session members of the Association who deal in Tin Plate and Metals will meet for a conference. Also at 1.30 P. M. a preliminary conference of the secretaries of various local and sectional associations will be held.

Wednesday Afternoon: Delegates will assemble at 2.30 P. M. sharp. Report of Executive Committee. Report of Membership Committee. Report of Grievance Committee. Report of Fraternal Relations Committee. Report of Press Committee. Report of Transportation Committee. Report of Entertainment Committee. Report of Metal Committee. Report of Heavy Hardware Committee. Communications. New Business.

Wednesday Evening, Convention Hall, 9 to 12 o'clock: Smoker. Polk Miller Combination—Delineation of Negro Character. Mock Trial—Application for the appointment of a Committee in Lunacy having been made by the Customers, Creditors and Competitors of a certain concern, who have been conducting business in a very peculiar manner, the same will be considered by a Full Bench and a Competent Jury. Eminent legal talent has been secured by both sides. The application will be strongly resisted. A writ *de lunatico inquirendo* has been fully filed in this case. The Jury will be composed of ladies and gentlemen. Complimentary to members of the Association and visiting friends.

Thursday Morning, 9.45 o'clock, sharp: Miscellaneous Business. Discussion—"What is the proper basis for computing true cost?" "How can we best co-operate with manufacturers?" Miscellaneous Business.

Thursday Afternoon, 2.30 o'clock, sharp: Delegates, ladies and visitors will be guests of Richmond Jobbers and Manufacturers on a visit to various points of interest in and around the city.

Thursday Evening, 8 o'clock: This session is open to delegates, ladies and visitors. Collocution. Market conditions! Are not present values on a reasonably sound basis? W.

T. Graham, of the American Tin Plate Company; F. L. Clark, of the American Steel Hoop Company; H. R. Towne, of Yale & Towne Manufacturing Company; Wm. H. Mat-thai, Secretary of the National Enameling and Stamping Company, and others.

Friday Morning, 9.30 o'clock: Delegates will please assemble promptly. Election of Officers. Arranging seat of next convention. Discussion—How can we aid those in charge of Sales Departments? Miscellaneous Business.

Friday Afternoon, 2.30 o'clock: Introduction and installation of officers. Discussion.

Friday Evening: Annual banquet, Hotel Jefferson.

Key to delegates in attendance, giving the names of the jobbers and their representatives:

#### Alabama.

1. J. D. Moore, Birmingham.
2. J. D. Moore, Jr., Moore & Handley Hardware Co., Birmingham.
3. C. E. Thomas, May & Thomas Hardware Co., Birmingham.
4. Barney-Cavanagh Hardware Co., Mobile.
5. Cunningham Hardware Co., Mobile.
6. Teague, Barnett & Co., Montgomery.

#### Arkansas.

7. Jas. Mandlebaum, Fones Bros. Hardware Co., Little Rock.

#### California.

8. Wakefield Baker, Baker & Hamilton, San Francisco.
9. Brace Hayden, Dunham, Carrigan & Hayden, San Francisco.
10. Thos. P. Smith, Secretary Pacific Coast Hardware Association, San Francisco.
11. Chas. F. Tay, Geo. H. Tay Co., San Francisco.
12. Miller, Sloss & Scott, San Francisco.
13. Holbrook, Merrill & Stetson, San Francisco.
14. Geo. W. Gibbs Co., San Francisco.
15. W. W. Montague & Co., San Francisco.
16. Harper & Reynolds, Los Angeles.
17. Union Hardware and Metal Co., Los Angeles.
18. Schaw, Ingram, Batcher & Co., Sacramento.

#### Colorado.

19. Geo. A. Bushnell, Geo. Tritch Hardware Co., Denver.

#### Connecticut.

20. Col. R. S. Woodroff, C. S. Mersick & Co., New Haven.

#### District of Columbia.

21. Geo. J. May, F. S. May & Co., Washington.

#### Florida.

22. Frank S. Gray, S. W. Hubbard & Co., Jacksonville.
23. Mr. Craft, Knight & Wall Co., Tampa.

#### Georgia.

24. W. M. Chumley, Beck & Gregg Hardware Co., Atlanta.
25. Geo. E. King, King Hardware Co., Atlanta.
26. A. B. Palmer, Palmer Hardware Co., Savannah.
27. J. D. Weed, J. D. Weed & Co., Savannah.
28. Chas. A. Conklin Mfg. Co., Atlanta.
29. Edward Lovell's Sons, Savannah.
30. R. T. Semmes & Co., Savannah.

#### Illinois.

31. Geo. W. Trout, Chicago.
32. W. C. Heinbecker, Geo. W. Trout & Co., Chicago.
33. Frank Jack, Isaac Walker Hardware Co., Peoria.
34. F. E. Smith, Clark, Quien & Morse, Peoria.
35. Rudolph Tenk, Tenk Hardware Co., Quincy.
36. C. Sidney Shepard & Co., Chicago.
37. Edwin Hunt's Sons, Chicago.
38. Morehouse & Wells Co., Decatur.

#### Indiana.

39. R. P. Van Camp, Indianapolis.
40. Cortland Van Camp, Van Camp Hardware & Iron Co., Indianapolis.
41. Indianapolis Hardware Co., Indianapolis.
42. Boetticher, Kellogg & Co., Evansville.

#### Iowa.

43. A. D. Baker, Baker Hardware Co., Sioux City.
44. J. S. Hayes, Huber & Kalbach Co., Oskaloosa.
45. F. H. Hill, The Empkie-Shugart Co., Council Bluffs.
46. P. A. Knapp, Knapp & Spencer Hardware Co., Sioux City.
47. Col. J. R. Nutting, Davenport.
48. Grant Nutting, Sickels, Preston & Nutting, Davenport.
49. H. L. Spencer, Knapp & Spencer, Sioux City.
50. Schreiber, Conchar & Westphal Co., Dubuque.
51. A. Tredway & Sons Hardware Co., Dubuque.
52. C. E. Otto, Drake Hardware Co., Burlington.
53. Chas. F. Schmidt, Burlington.
54. J. D. Seeberger, Des Moines.

## Kansas.

## WEDNESDAY MORNING SESSION.

The first session of the convention was held in the Convention Hall of the "The Jefferson" on Wednesday afternoon, President Bindley occupying the chair. Upon the opening of the doors, a fraternal welcome was given to all present to assist in the proceedings—delegates, manufacturers and their representatives, members of the press and others. The President then announced the convention open for the transaction of business. A number of ladies were present.

The Rev. W. W. Moore offered prayer.

The convention then joined in singing the National anthem, "My Country, 'Tis of Thee," which was led by a cornet.

A letter was read by the Secretary-Treasurer from Governor Hoge Tyler, expressing his regret at being unable to attend. He was obliged to be absent attending the unveiling of a statue.

A welcome to the city was extended by Colonel Archer Anderson, President of the Tredegar Iron Works, speaking on behalf of Richmond's business men. His spirited address was received with enthusiasm, being delivered in the good old Southern style, which seemed to meet the views of all present. In his address he referred to the gallantry of those who fought in the war between the States, and of the reunited country, which provoked great enthusiasm, and an outburst of responsive cheering, the demonstration lasting several minutes, the business men present representing every part of the United States, joining in the applause instigated by the sentiments expressed by the Richmond manufacturer.

The convention was also addressed by Mayor Taylor, welcoming the delegates to the city of Richmond, which was responded to briefly by President Bindley.

A handsome gold-mounted ebony gavel was presented to President Bindley by First Vice-President Shapleigh, of St. Louis, on behalf of the Association. Then followed the roll-call, and at the suggestion of the President, the delegates representing the house stood up and announced distinctly the names of those on the floor representing that house. The reading of the 1899 convention minutes was dispensed with. The President then delivered his annual address.

## ANNUAL ADDRESS OF JOHN BINDLEY, PRESIDENT OF THE NATIONAL HARDWARE ASSOCIATION OF THE UNITED STATES.

Gentlemen of the National Hardware Association of the United States:

It is with unfeigned pleasure I extend to you, not only my greetings, but also my congratulations upon the assembling

of this our sixth annual convention. The commendable depth of interest as manifested in our coming together is apparent by the presence of such a goodly number of our members, as well as by the attendance of our friends—the manufacturers—which we take to be substantial evidence of how our interests are interwoven each with the other, which is certainly a felicitous condition.

We are to be congratulated upon the large representation we have of delegates and manufacturers, and, above all, in the fact that we are favored with the presence of the ladies; this augurs well for the success of our convention, for where the fair ones lend their presence to grace a convention of this kind, and give their approval, certainly only good—and that of the highest order—can be the result.

Our members thought it well to step aside from the usual path, of meeting in Northern centers of manufacturing, and accepted the cordial invitation to meet this year in Richmond, and to-day we are enjoying true Southern hospitality, imbibing the spirit of this truly historic atmosphere in the State of the mother of Presidents, and it is earnestly hoped that we shall be so imbued with this all-pervading spirit of

PRESIDENT JOHN BINDLEY.

good will and harmony that this will prove the most successful of all our conventions.

At this, the end of the sixth year of our existence as an association, we have grown and developed into a strong, healthful body, full of vigor, yet with much latent power undeveloped, which can and should be used for the positive advancement of the business world. There was no idle dreaming of the creators of this organization as to its necessity, for its permanent existence has been productive of much good. The fact that it has nearly a unanimous membership of the Hardware jobbers of the United States will readily prove its intrinsic value to our members. A retrospective view at this hour, taking us back to the date of organization, may prove interesting. The business world six years ago was in a thoroughly demoralized condition; manufacturers, jobbers, retailers—all were at sea; owing to the great depression then prevailing, every conceivable theory—no matter how vague or wild—was put into practice, or the effort to do so attempted, with the result that it seemed as if the eventual condition of even the strongest firm, managed with the greatest perspicuity and ability, must be bankruptcy. Then came the formation of the National Hardware Association, and with it came a glimmer of light from a silver lining in the clouds of business gloom; the improve-

ment in conditions, though slow, was gradual and continuous, until our present position has been reached. It is not my desire to weary you with details, but simply to direct your attention, "Lest we forget," so that you may recall the then unfavorable conditions, and trace them out to your own satisfaction, thus being reminded of what has been accomplished, and how essential it is to continue this good work—never becoming weary in well doing, but through the advantages already acquired constantly place our desires and aims on ever higher and higher attainments in the new ideal of better business methods.

You will readily recall with what doubts and fears the early work of the association was entered upon—how conservative and thoroughly considered each step was taken, and how your officers in the past were compelled to take into the most critical consideration the doubts, jealousies and suspicions, including the innumerable imaginary and diverse interests, not only of our members, but those of our manufacturing friends as well. These all were gradually overcome, and to-day we stand a compact, well cemented body, with an earnest ambition, and an unusual power, capable of doing great good to the entire business world. It is still essential that we have the continuance of your best thought—your encouragement—your united and active support—your faithful allegiance in carrying out and enforcing the measures already adopted for the maintenance of our position, which will doubtless mean the bringing of advanced conditions to be met in a masterful way, the many requirements made upon us, either as merchants or manufacturers, in the ever essential evolution of business methods. It is purely within our own sphere to absolutely control any situation. The question is: Shall we do so?

It is conceded that to-day we stand as the model organization of trade association, and our counsels, formulæ and methods of procedure are eagerly sought by others going in a similar direction.

#### PITTSBURGH CONVENTION.

The phenomenal conditions in prices of material which existed during the year '99—with advances continually taking place, until the values in many lines were beyond reason—gave us an enthusiastic convention in Pittsburgh. We realized that because of our association each of us reaped the harvest to a much greater extent than would have been possible under individual effort.

As beneficial as our organization was to us under the foregoing conditions, it is of more value to us now. It is more essential to have the means at hand to prevent demoralization rather than to reap the benefit of advances, for under the latter condition you have a stimulated market, whereas in the former, conditions are exactly the reverse. Under the circumstances as they exist at the present time, it becomes our duty, not only to ourselves, but also to our neighbors, to be strong, firm and positive in our positions, to act in concert and prove the value of the work performed—adhering strictly to the agreements entered into on our behalf. Thus not only will demoralization be stayed, but more satisfactory results, with their many accompanying benefits, will appear, and we will have the conscious commendation within us that we are and have been conducting our affairs along proper and just lines, and such as are conducive to the highest elements of business success.

We are glad to have with us delegates from the Canadian Wholesale Hardware Association, and extend to them a most hearty and cordial welcome; we hope these gentlemen will participate liberally and with perfect freedom in all our deliberations.

The presidential election of 1900 is a matter of history, and the verdict, as rendered by the sovereign people, presages a continuation of the policy that has existed the last four years—the sweeping away of doubts and fears, as to a change of policy, to one of stability that has the endorsement of the business world, gives us a confidence in the present and

future, that we can with complacency arrange our individual affairs as to the future with a degree of great satisfaction, for the broadening and deepening of our business relations.

#### LOYAL SUPPORT OF ORGANIZATION BY MEMBERS AND MANUFACTURERS.

We urge the manufacturers, as well as our members, to the loyal support and ardent defense of this association. The wise and conservative action of the officers and Executive Committee in the past has, we feel, proven beyond all cavil that the interest of the manufacturer has at all times been conscientiously considered and carefully conserved. It is true that our first duty is to our own members, but we are firmly convinced, from past experience and close observation, that the best interests of the manufacturer can be advanced by working in close alliance with us, and those manufacturers who so believe and act in unison with us will be accorded every possible inducement to work hand in hand to their individual benefit with the distributors of their products. Experience has taught us that this is the true and best policy—therefore we confidently ask from the manufacturers their earnest, enthusiastic and cordial support.

#### REQUESTS FOR MANUFACTURERS' CONFERENCES.

If there are any manufacturers who are not working in full accord with our association, we strongly urge them to come within the fold. It is a common and frequent occurrence that manufacturers request conferences with the officers of the National Hardware Association, so that their policy may be framed in accord with the desires and wishes of the jobbers. The results of these conferences are invariably to the mutual interest of all concerned, and we strongly commend this method, asking for still closer the more frequent conferences, believing we all should labor earnestly in this direction.

#### ADVANTAGES TO SALESMEN.

In the earlier days of our association the impression seemed to prevail among a very important branch of our individual establishments, namely, our traveling salesmen, that the objects of the organization were inimical to them, but this has all been dissipated, and they are now in full accord and sympathy with us, fully realizing that that which uplifts the whole must benefit each and every component part thereof.

#### ADVANTAGES TO RETAIL MERCHANTS.

We congratulate those sections that have organized themselves into local Retail Associations; they have our concern and solicitude, and have had thoughtful care bestowed upon them for their extension, welfare and interest; they have been valuable auxiliaries to us, practically standing in the same position to us that we do to the great body of manufacturers. We have constantly in our minds the care of their interests, as well as their protection; their province is to sow the seed in introducing to the consumer new goods, and to keep the same in daily use; as they do the sowing so should they reap the richest reward of their labors. We recognize no greater injustice can be done any class than to have others step in, take their business away and forcibly reap where they have not sown.

#### LOCAL AND SECTIONAL ASSOCIATIONS.

It is with regret we note that in some sections of our country local associations do not flourish; this can be partly accounted for in the fact that frequently too much economy is observed in their operation. It is barely possible for local associations to be of any permanent value or existence unless the Secretary is a paid officer, and he should in no wise be connected with the house of any member of the organization. To secure the best results he should be free from all affiliations; under such conditions he will command the confidence of each and every member. Ordinarily there would be no objection to his serving several local associations—connecting these together through a sectional organization. This will produce valuable results, and if we are to secure

anything like the returns we are entitled to from being members of the National Association, we should immediately resurrect, instil new life and revivify our local associations. This should not be a subject for dilatory action, but should be put into operation at once; this cannot be urged too strongly for your immediate consideration. The returns will be many fold beyond any reasonable or possible cost.

#### OUTLOOK.

With the readjustment of values, which will place matters in a normal condition, and the fact that our manufacturers have entered the markets of the world—thus relieving our own country of surplus—our exports being the largest in any point of our history, it seems to us that the outlook is one of great promise, and the harvest should be burdened with satisfactory results. It largely depends on our improvement of the opportunities—it requires wise action as individuals—hearty support of the collective wisdom of the officers, Executive Committee and the association in such combined action as they may take—and all in a manner that admits of no equivocation. The result of the future is in our hands. Shall we garner the wheat or be satisfied with the tares? Hasty, unwise action may destroy the whole colossal business fabric now before us—whereas, conservative, considerate, intelligent and united action will surely pilot our bark to the desired haven. Competition is truly the life of trade, but the same ingredient unrestrained and uncontrolled is even more truly the death knell thereof.

#### PENNY POSTAGE.

The reports from the Postoffice Department show conclusively that the business interests of the country is over-taxed in carrying our sealed letters. If the matter of postage were properly adjusted—instead of charging two cents for sealed letters, one cent would be ample—this being true it is unfair and unjust that the business interests of the country, and especially our own, should have placed on them this extra burden, or tax. I recommend, therefore, that we, as an association, take action by passing a resolution asking for a reduction of postage on sealed letters from two to one cent each per ounce, and that if said resolution is passed that a copy thereof be sent to each Senator and Congressman.

#### DEATHS.

The Grim Reaper has been busy amongst our members since our last annual meeting, removing in some cases those who have been active and prominent in business circles for several generations—in certain instances, before the most of us entered trade. Their names to us all have been as household words, and it is proper for us, for a moment, to pause, consider our loss and express our sympathy and extend our condolence to those who have been so directly affected by their demise.

On August 23d, John Pritzlaff, President of the John Pritzlaff Hardware Co., of Milwaukee, entered upon his well-earned rest, leaving behind him a monument which he had been eighty-one years in erecting, to which his family, his business associates and his thousands of friends can point with pride. Coming to America as a poor boy, he humbly pursued a course of life without ostentation, but full of firm determination to live honestly, and walk uprightly before his fellow-men, with the result that no man who has died in his community during recent years had more sincere or earnest mourners around his bier.

On January 29th, Edward Failing, of Corbett, Failing & Robertson, who had been one of the pioneer Hardware men of the Northwest, ended his earthly pilgrimage, while yet in the prime of life. Mr. Failing was known along our Northwestern coast as a man of probity and honor. He had devoted the best years of his life to building up the reputation of a concern which to-day enjoys confidence and respect wherever the name is known.

On January 8th, Henry Watts Merchant, Treasurer of Merchant & Co., Inc., departed this life very suddenly. He

was in the prime of life, and enjoyed the confidence and esteem of his associates in all walks of life. He had been trained to regard honor above all things, and those who knew him in a commercial way since he entered business, speak of him as being a young man who, under no circumstances, would be a party to a dishonorable transaction. The loss to his firm was keenly felt; more especially does our sympathy go out to his esteemed father, Mr. Clark Merchant, who was thus compelled to part with his only son.

During the year the gentleman who was Vice-President of the association during the first year of its existence—Mr. John Alling, of Chicago—was also removed by death; he having completed 72 years of life. Mr. Alling belonged to that old school of merchants who attracted custom more by personal worth than business subterfuges. During his active career, it was impossible to point to any blemish in his character.

We have also, during the year, learned of the decease of Mr. Charles S. Landers, of Landers, Frary & Clark, and Mr. Fredrick N. Stanley, of the Stanley Rule & Level Co., both of whom were well known and respected by the members of this organization. As an association, we tender our most sincere sympathy to the bereaved families and associates of these departed friends.

#### REPORTS.

The work of the association in detail will be found in the reports of the Secretary-Treasurer, and the various committees. The future policy, with general outlines of same, including recommendations, will be found in the report of the Executive Committee; this I commend to your most thoughtful and careful attention.

In closing my report I cannot refrain from expressing my heartiest thanks to the Executive Committee for the faithful, attentive and intelligent consideration given to every subject and interest in the advancement of your individual welfare and association in general. It is difficult to conceive of a body of men—so necessarily active in their own affairs—who at any and every sacrifice demanded of them, so willingly and with such unselfishness have so cheerfully made the same for the advancement of the interest of our association. Their intelligence and experience, it is true, fitted them for the discharge of the work assigned to them in a manner much beyond the average committee man, and to them is due the credit for that advanced position and healthy condition of our organization.

To our Secretary-Treasurer I desire to express my appreciation of his earnest, intelligent assistance and well-directed efforts—ever ready and willing upon the slightest notice or suggestion to take up any specific work—nothing apparently was an inconvenience to him; he put forth in the advancement of your interest an enthusiasm that could emanate only from his love of the work, emphasized with the high ideal of his interpretation of the duties of the office.

The President, on resuming the chair, called on Secretary-Treasurer T. James Fernley for his report, when he addressed the convention as follows:

#### SECRETARY-TREASURER'S REPORT.

Mr. President and Gentlemen:—The mutations of time bring us at the present moment to the close of the sixth year of our existence as an organization, and, as is usual, you have called upon your workman for an account of the service they have rendered you during the past year. It is customary in reports of this nature to allude to the feeble efforts which have been put forth—to apologize for the work which has been left undone, and to express a hope that the mistakes of the past may prove to be beacon lights for the pathway of the future—but we don't propose to render any such kind of a report. . . . All of these weaknesses have doubtless been observed during the year. . . . We rather come before you to-day to tell of the great achievements which have been accomplished by the President, the Executive Committee and the Secretary-Treasurer of the

Association, and, if possible, in making these reports, we would have you endeavor to lose sight of the fact that we have back of us such a strong organization and to think that we, your officers, as individuals, are doing all. I say we would like to have you obtain this impression, but unfortunately it is not possible, because our organization is known from one end of this country to the other as, without any exception, the strongest organization representing any trade known to the commerce of our land.

Our organization is strong, because

First, the representative houses, and only such, of the country are on our roll.

Second, because the manufacturers of the country have realized that we are a strong ally, and that we can largely aid them in extending the popularity of their goods.

Third, we are a strong organization, because the retail merchants of the country recognized that our Association has been of great benefit to them.

The rank and file of our members possibly have not stopped to consider the rare privilege it is to be connected with an organization of this kind.

Your Secretary-Treasurer, during the year, has traveled quite extensively, covering some 14,500 miles. In addition to visiting local and sectional associations, it was our pleasure to attend, as a fraternal delegate from this Association, the annual convention of the Canadian Wholesale Hardware Association. This Association, which was formed largely through our instrumentality, received us with great cordiality, and extended courtesies far beyond our most sanguine expectation.

At this convention we are favored with the presence of delegates from the Canadian Association, and I bespeak for them a most generous welcome, knowing it will be most heartily accorded.

#### THE SALES DEPARTMENT.

During the year we have had considerable correspondence with the managers of the sales department of the houses connected with our Association. We have issued some literature, to be distributed among the traveling salesmen. This literature has been reproduced in many instances by associations in other lines of business. We very frequently received a special request from a national or sectional association of merchants in some line entirely foreign to our own requesting the privilege of using literature of this kind, which has emanated from your Association office. It is for the future. . . .

#### SUSTAINING MANUFACTURERS.

During the year we have met two hundred and ninety-five manufacturers, or bodies of manufacturers, and discussed with them the relations which do exist, and should exist, between themselves and the members of our Association. We find there is prevalent a decided desire on the part of manufacturers to distribute their goods through the jobbing trade, and, further, that this force should be properly compensated for the service performed, and there is a decided inclination on the part of at least 95 per cent. of the jobbers of the country to accept the remuneration offered. A small percentage, however, of the jobbers endeavor to create a favorable impression on their customers by attaching the principles of certain manufacturers on certain lines and selling some goods at less than the manufacturers' established prices. These parties always make up the loss, and in their attempt to do so get a great deal more than they are entitled to.

We find that the average intelligent retailer does not desire to buy a line of goods from the type of houses that pursue a course of making cuts on certain lines of goods.

While we ask the manufacturer to properly protect the jobber, at the same time we feel that the manufacturer is entitled to some protection, and while our efforts have been in the direction of having manufacturers properly protect us,

we believe that it is but fair, honorable and honest that the jobbers of the country should sustain them.

We would ever have our members remember that there are two sides to every question.

#### THE CASH DISCOUNT.

Our members doubtless recall quite vividly with what anxiety this question was discussed at our Pittsburgh Convention. For all time, the principle of allowing the prompt payer—and by this, I mean those who really anticipate the payment of their bills—a premium for so doing, had been a trade custom, and yet in July of 1899 certain large interests, prominent among those who produce goods which the Hardware jobber is called upon to distribute, ignored this trade custom and made extreme terms—thirty days, no cash discount. This was so thoroughly discussed at our last convention that all of our members will recall the points raised. Your officers realized that the abolishing of the cash dis-

SECRETARY-TREASURER T. JAMES FERNLEY.

count was a financial loss and a great hardship to all branches of the trade. Unfortunately, a large number of other reputable manufacturers followed in the wake of these concerns, and announced the abolishment of the cash discount, so that a year ago it was stated by a large number of those who were well versed in the Hardware business that the cash discount had gone for all time.

The manufacturers attempted to show us that it would be better for the interests of the jobber that terms should be shortened, and that all we had to do was to compel the retail merchant to pay his bills within thirty days. The jobber could have financed his business in such a way as to have rendered it quite easy for him to have paid for all purchases on the basis of net cash thirty days. Indeed, it would take less capital to conduct a jobbing business on this basis than on the basis of paying, as does the average jobber, in ten days; but we felt it would be a hardship to the retail merchant to compel him to pay his bills in thirty days, without any premium for anticipated payment, and so our Association at its Pittsburgh Convention passed this resolution:

*"Resolved, That it is the sense of the National Hardware Association that the discount of 2 per cent. cash ten days formerly given by manufacturers of steel and iron goods be not construed as bank interests, but as a premium for prompt payment, and an insurance or protection of credits; and, further, that such or similar discount be retained where still allowed, and that we urge its restoration where it has been discontinued."*

You will notice that this vote of the Association alludes to the cash discount as "a premium for the anticipated payment." Certain very prominent financiers who were also attempting to manufacture goods told us that it is an "interest" for the money, and that money was not worth such a large rate of "interest," and so on and so forth; but immediately after the convention we took up the keynote of this resolution, and we stopped calling this allowance a "cash discount," but we called it rather a "premium" for anticipated payment "within ten days;" and we suggest that it would be quite well to continue this name, so that if any of the rising generations yet unborn should attempt to erect a monument to their superior commercial sagacity, and attempt to argue that 2 per cent. is too heavy a rate of interest for sixty-day money, those who follow us as distributors of goods can meet such fallacious arguments by the statement that it is a "premium for anticipated payment," and not a "discount" for the use of the money.

#### METAL BRANCH OF OUR ASSOCIATION.

The members of our Association engaged in distributing tin plate and metals have been very active during the year in presenting to manufacturers suggestions as to methods of distribution which would be mutually agreeable. Much has been accomplished in this direction. The details will be furnished by the Metal Committee in their report.

#### TRUE METHOD OF ARRIVING AT COSTS.

One of the subjects which we have brought to the notice of local and sectional associations has been that of arriving at a more equitable basis of costs. The president of our Association, being the father of this idea, and desiring it to be a distinctive feature of this administration, we have felt it incumbent upon us to urge the necessity of a plan very strongly upon our membership. We are most happy to state that a lively interest on the subject has been awakened, and we look forward with confidence in the success of this new departure.

#### MEMBERSHIP.

During the past year we have had a very large number of applicants for membership, but action on most of these has been deferred, as it was thought unwise at the present time to increase our membership list. We have on our roll 183.

#### RELATIONS WITH THE RETAIL TRADE.

During the year we have had correspondence with the secretaries of quite a number of retail Hardware organizations, and have done what was in our power to aid them in harmonizing our mutual interests. More recently we have had correspondence with the Interstate Hardware Dealers' Association, an organization which, while yet in its infancy, gives promise of becoming a strong factor in the trade. The retail dealers of the country have grievances which should be rectified, and we believe that through co-operation these merchants can make the conduct of their business more pleasant and profitable. The same class of manufacturers who in past years have been encroaching on the province of the jobber have also been reaching out for the customer of the retailer, namely the consumer, but have used a class of dealers who have endeavored to accomplish the work of intelligent men, such as found on the road, representing the jobber, and behind the counter of the retail merchant, by issuing cheap illustrated catalogues naming what seems to be low prices for goods which are sold in all cases on a basis with the order. Manufacturers who pursue this course doubtless feel that they are increasing the demand for their goods; they lose sight of the fact that when they employ this cheap paper method of reaching the consumer they are

only driving them from the influence, patronage and goodwill of two hundred legitimate Hardware houses, their twenty-five hundred traveling salesmen, and upward of fifteen thousand retail merchants, the latter having in their employ forty-five thousand salesmen. Would it not be well if all manufacturers whose goods are handled by this class of operators should study well the situation, and stop, look and listen before continuing on their present course?

#### SECTIONAL AND LOCAL ASSOCIATIONS.

During the past year interest in these local organizations in all parts of the country has been greatly intensified. At the present time in almost every part of our land we find strong sectional organizations, meeting with great regularity, and giving very careful consideration to ways and means of correcting trade abuses. It has been our pleasure to visit a large number of these organizations during the past year. On these occasions we have been afforded every courtesy and ample opportunity to secure co-operation of these organizations in the work of the National Hardware Association.

Most of the larger sectional associations, such as the Pacific Coast Hardware and Metal Association, the Southern Hardware Jobbers' Association, the New England Iron and Hardware Association, have salaried secretaries, who are devoting their time and talents to association work. Organizations pursuing this course are accomplishing the best results. We strongly urge upon all trade organizations the importance of having a properly paid secretary, whose duty it shall be to zealously work for the association employing him.

#### TRANSPORTATION.

On Jan. 1, 1900, the railroad companies of the country, through the various traffic managers, announced a change in the rating of some sixty-six leading lines of Hardware, claiming that they felt a yearning to participate in the prosperity which was prevailing in the iron and steel business.

The chairman of the Transportation Committee instructed us to send a schedule of the changed rates to the membership, with a request that they would inform us as to whether they wanted any action taken by our Association. As a result of this inquiry we received protests from all those affected by this change of rates, these letters of protest being accompanied with the request that we do the utmost to have former classification restored.

On Jan. 22 we were given a hearing by the Classification Committee and the traffic managers of all the railroad companies east of the Mississippi River. Before the hearing your secretary-treasurer was requested by a large number of manufacturers to act for them as well as the members of the National Hardware Association. Knowing that the members of our Association would gladly aid their manufacturing friends, we represented both interests, and it was our pleasure to be informed a few days after the hearing that our views had been partially met, and hence a large reduction in the rate was made to take effect on Feb. 15. We firmly believe that the railroad companies made a great mistake in advancing the classification of these lines of goods, and we recommend an earnest effort to have Hardware restored to the classification previously prevailing.

We have now finished the sixth year of our work as an organization. The record by which we must be judged is before you. Unfortunately it is not possible to keep a ledger account with an organization such as this. We believe that if it could be done the beneficial result would be so apparent that our members would to a greater extent appreciate what has been accomplished. Your secretary-treasurer personally asks for no words of commendation. He is remunerated in another way as, perhaps, you are aware; but we do hope that the members of the organization will appreciate the work of the Executive Committee and Advisory Board, and more especially the labors of the president of the Association. During the year he has conferred very freely with

your secretary-treasurer, and his directions have been given in such a manner as to cause us to almost forget that we were being instructed as to our duty, and at times we have hardly realized that we occupied the position of a servant, and have many times felt that we were almost on an equality. The confidence in the president of our Association, which has been apparent when coming in contact with manufacturers, has aided us greatly in furthering your interests.

We almost earnestly desire that the delegates to this convention will give most careful consideration to all subjects discussed, believing as we do that the usefulness of the organization can be greatly intensified, and the benefits derived be as manifold as they are manifest.

We want personally to thank the members of this organization for having continued us in this position so many years, and to frankly state that this has been the most pleasant period of our existence.

The delegates from the Canadian Hardware Association were then introduced, and after thanking the Association for their reception, Secretary-Treasurer Fernley, taking from his pocket the Union Jack, stated that it was presented to him on his recent visit to the convention of the Canadian Hardware Association. At the suggestion of the President, every one stood up and sang, "God Save the Queen." The Canadian representatives were then decorated with tiny American flags by President Bindley. This was followed by singing, "My Old Kentucky Home" by all present, when President Bindley announced that the ladies of Richmond would receive the ladies attending the convention in the Blue Parlor of "The Jefferson."

Address of Peleg Howland, of H. S. Howland & Sons, Toronto, President of Canadian Wholesale Hardware Association.

Mr. President and Gentlemen:

I am very glad to be here, and I can safely say that I am speaking the sentiments of my fellow-delegates from the Canadian Wholesale Hardware Association (Mr. Starke, the Vice-President, and Mr. Hardy, the Secretary), when I thank you heartily for the opportunity that has been given us to be present at your deliberations. We expect to get much valuable information from listening to the opinions and experiences of your members.

I have watched the progress of your Association with much interest. I have been favored with copies of the reports of the proceedings at several of your meetings, and have read them all with interest. I admire the motto you have chosen, and am sure you have done much toward "raising the standard of business methods."

This year we have had the pleasure of welcoming your Secretary to the Annual Meeting of our Association at Quebec, and I must confess to a strong admiration for his personality, and his zeal and enthusiasm.

The efforts of your Association to steer trade into what we consider its legitimate channels, are not only beneficial to us from force of example, but have a direct influence, as we are buyers to a considerable extent of American manufactured goods.

The Canadian Wholesale Hardware Association, which Mr. Starke, Mr. Hardy and myself represent, is not quite twenty-four months old, though it has entered upon its third official year. We have a membership of eighteen, but two more than last year; though we have had many applications we have been careful to admit only those that we have thought were properly qualified. When I stand before the large number of people present to-day and realize that you have a membership of nearly two hundred firms, our Association seems a small affair, but, when it is taken into consideration that the whole of Canada has a population probably not exceeding 5,500,000 people, against that of the United States of over 76,000,000, or as one to fifteen, we are justified in claiming that we are as representative a body as you are.

Here are some of our troubles. Do you not think there is a field for us?

In a country with as small a population as Canada, where the manufacturers of iron and steel products owe their development to a protective tariff, and where there is practically no foreign market, a point of over-production is soon reached, and in the consequent struggle for an outlet, the lines of distinction between the classes of trade, are, of necessity, overlooked, with the result to the jobber of restricted sales and narrow margins. You have the same trouble, but with your larger market I cannot think to the same proportionate extent. Our Association, in common with yours, has been struggling to regulate this kind of thing, and with some measure of success.

Then, we have the competition of the American manufacturer who, in his efforts to get rid of his surplus, reaches out for the trade of our larger retailers at prices which prevent our own manufacturers giving us profits, even when they are so disposed. Your high tariff prevents this system from becoming the boomerang it otherwise might. We hope that the influence of your Association will help us in our efforts to overcome this evil.

Then we have the competition of the retail syndicate buyer, of the foreign agent, English, German, Belgian or American, and of the American jobber, in some sections, now and then—in others, all the time. Add to those conditions the fact that we sell goods in the older provinces on four months' time or 3 per cent. 30 days, and in the far West certain classes of them at six months' time or 5 per cent. 30 days, with renewals, even at that—and you will realize some of our difficulties—why our gross profits are narrow, why our net profits are small and sometimes nil; why some of us find it necessary to do business from Nova Scotia to British Columbia to arrive at a reasonable yearly volume, and why, from necessity, as was proved at our meeting at Quebec—our average percentage of expense is less than I understood yours to be.

Notwithstanding all these unfortunate conditions, I do not believe the Hardware jobber's day is over in Canada. I believe he is still a necessity, that there is still room for a few of him—but only a comparatively few—that, owing to the centralizing process which is so apparent in almost every line, his business must be one of small margins and proportionately large volume. To his success large capital, never ceasing application, economy, integrity (there is no room for the trickster in the trade), and up-to-date methods, are essential, and even with all these I question if there will be a reasonable return without co-operation. Is it different with you? I fancy not. I venture to hope, therefore, that the National Hardware Association may prove a permanent organization to the profit of its members, and to the benefit of the trade generally, including the manufacturers, to whom your steadying influence must be of enormous value, and I am sure that I voice the opinion of the whole membership of the Canadian Hardware Association when I assure you that we are desirous of working with you in our humble way, to our common good.

The President then introduced Mr. Starke, of the Canadian Delegation. Mr. Starke said that Mr. Howland had expressed his sentiments, and he thanked the Association for his kindness. Mr. Hardy also replied that Mr. Howland had fully expressed his sentiments on the subject and thanked the convention for the honor conferred upon him.

The President stated that the next thing in order on the programme was, "Is the jobber essential as a distributor, or should manufacturers perform this service?"

Mr. F. R. Dickerson, of the American Tin Plate Company, being called, said:

Mr. President and Gentlemen of the Hardware Association:

I am very glad to be with you here this morning. I thank you for the privilege of attending your session in this historical city. I am very grieved, though, Mr. President—

grieved in my heart, for you called on me about three weeks ago, and assigned to me an entirely different subject, and it was not until this morning about half-past nine—until I saw one of your programmes, and knew what I was expected to talk about.

In approaching this subject from a manufacturer's standpoint, remember, gentlemen, please, that for over twenty years I have been a jobber, and only for two years have I posed as a manufacturer, and, therefore, my sympathies are with the jobber. Gentlemen, I want to say this much: That there is no lack of harmony—no dissension—between the manufacturer and the jobber. Glance at the emblem of the country, "Old Glory," as it hangs above us this morning, you will see that there is no lack of harmony between the stars and the stripes; so I say there should be no lack of harmony between the manufacturer and the jobber. Each one has his part to perform. It was written nearly nineteen centuries ago that the laborer is worthy of his hire, and that principle is eternal. If you perform a just service as well or better than anybody else can do it, you are worthy of continuance. It is my opinion that the jobber does perform a distinct service and he does it better and he does it more thoroughly than the manufacturer can do it. For this reason the jobber, as I understand it, and I speak not only for myself, but for the company I represent—I understand a jobber to be one who buys goods in large lots and sells them in smaller lots—one who keeps goods in his warehouse or store for prompt delivery, and the manufacturer one who manufactures on orders for future delivery. Now you have a knowledge of the smaller buyer in all sections of this country. Bacon wrote, many years ago, that "Knowledge is power," and, therefore, you have the power behind you. You have knowledge as to what lines of credit you may extend to them—whether they are men of character or not. It is impossible for the manufacturer to know these things. You know them and treat them, as I have every reason to believe, as my experience of twenty years leads me to believe, you will treat them justly and fairly. Therefore, you perform a service that is a benefit to them, and hence, of benefit to the country. You perform that service, in my opinion, more thoroughly and with better satisfaction to them and to us, than we ourselves could do it. Therefore, gentlemen, I believe in the jobber and I believe that he is a necessity. (Applause.)

The President: The next in order will be an address by Mr. Charles B. Adamson, of Baeder, Adamson & Co.

Mr. Adamson addressed the Association as follows:

I believe, Mr. President, that it was the late General Hancock that gave, when a candidate for the Presidency, the qualified reply to the Committee of the Woman's Rights Association, when they asked him if he favored the right of women to vote: Ladies, it would be a brave man who thought otherwise, and so, Mr. President, I feel that it would be a brave man, indeed, who would, in this presence, advocate the opposite side from that which you gentlemen represent.

It is, however, not fear that leads me to state that my conviction is that the jobber is the natural and proper medium of distribution of the goods. Perhaps I hold this view from my teacher. I well remember the time twenty-five years ago when, after some years in the mills, I was taken into my father's office, and I was told that the first and cardinal principle of business was to hold the jobbing trade, and why should it be otherwise? Does not trade, like a river, find the easiest course? Is not the matter of cost of distribution of most vital importance, and has not the jobber, with his many lines, an immense advantage over the individual manufacturer, both in facilities of selling and in the percentage of cost? Can I, as a single line manufacturer, cover the same territory as the hundred and more jobbers? Can my individual salesman accomplish the results of one hundred salesmen—my indirect representatives—but in the

pay of the jobbers? Can the direct sales of my salesman to the amount of \$100 for sand-paper alone be done at a less actual cost in dollars and cents for salary and traveling expenses than the \$1000 sales of the jobber's salesman, made up of sand-paper and locks and screws and other lines? It does seem to me, Mr. President, that there can be no two sides to this question, and when we remember the very many successes and few failures of the jobber—it would seem as if our position was well taken. For one, I believe that the jobber to-day is a more natural and a better medium of distribution than would be the manufacturer himself. I believe this is true to-day, that it will be true to-morrow and next year and the year after, but, Mr. President, I hope the members of this Association will pardon me if I should use this occasion to say anything at all offensive, but I do believe that this situation will not forever continue with the jobber doing as he is doing at present. In every business enterprise that I know of, the matter of expense is more and more becoming the question of greater importance. Is it not so in your business? Can the jobber to-day feel at the close of the year, when the books are closed, that his profits are a fair compensation for the labor and effort put forth? Can the jobber to-day make his profit out of the difference between the expenses of his business and the expenses of mine in distributing my product? No sir; what I am told is true. In your business I am told that many lines are actually sold at a loss, and it must follow that these—our profit-producing lines, will increase, instead of decrease. Within the memory of us all there have happened great revolutions on both sides of the jobber. On the side of the manufacturer, immense aggregations of brains and capital have been brought together, and we have what is known as the trust. On the other side, that of the retail dealer, we have equally immense aggregations of brains and capital, known as the department store. Under these conditions, gentlemen, how long can you remain the medium of exchange between the two? Why, sir, I am told that there are department stores that demand and command better prices than the jobbers in certain lines, because their purchasers are greater. I know that in your own lines there are to-day certain articles that you, as jobbers, can buy for less than even a larger dealer who is not a jobber, but this is an arbitrary distinction due, I believe, most largely to the power of your organization and the successful and wise efforts of your officers; but, Mr. President, these distinctions, in name, are unnatural, and cannot be continued, and if you will permit me to guess it, it will be that the jobber of the future, who will be the medium of distributing my goods, will be the department jobber who will sell my sand-paper, my glue, and my curled hair, so that I can close my stores, dispense with the services of my salesmen, and have but one bookkeeper and one ledger, with but one-hundredth of the accounts I now have. I thank you.

Mr. J. G. Niedringhaus, President of the National Enameling and Stamping Co., was absent, and Mr. Robert Garland, of the Garland Chain Co., was called upon, who responded as follows:

The subject, "Is the jobber essential as a distributor, or should the manufacturer perform this service?" seems hardly debatable, either at this time, or under existing conditions, and the question arises as to whether it is just the thing to invite manufacturers to this meeting and give them such a one-sided subject for debate, as it is a foregone conclusion that no manufacturer present at this convention will question the essentiality of the jobber as the proper distributing medium.

When speaking of the jobber as a distributor, it is, of course, only contemplated that such distribution is to the wholesale and retail, or to the regular retail trade, which houses in turn sell to the consumer.

The manufacturer of to-day who makes goods that are handled by the jobber in Hardware recognizes very clearly

**JAMES D. MOORE,**  
Moore & Handley Hdw. Co., Birmingham, Ala.

**COL. JAMES R. NUTTING,**  
Sickels, Preston & Nutting Co., Davenport, Iowa.

**W. S. WRIGHT,**

**REPRESENTATIVE DELEGATES.**

that there is only one successful way in which he can market his goods. This must be through the regular medium, the jobber. With a limited line of goods, in many cases one or two specialties, a manufacturer could not afford to visit every town in order to sell his goods in small lots, and no amount of advertising or circularizing on his part, however catchy, can reach the small trade in the effective manner in which the jobber reaches it by means of his efficient corps of traveling men, who naturally have a great deal in common with the retail houses, visiting them at regular intervals, and inviting their attention to a full line of goods.

There are more questions involved which might well be brought up while this subject is under discussion, and one of these is where to draw the line as to the distribution of the goods of a manufacturer. There are large users of manufactured goods who prefer buying direct from the manufacturer. For instance, the railroad and car companies, the wagon and agricultural implement manufacturers, as well as others, who manufacture certain lines for sale, and only purchase goods for use in their own works or factories. This is a trade that the manufacturer must deal with direct, so that the subject, "Is the jobber essential as a distributor?" has its limitations as well as its reservation.

Without question, the manufacturers will prefer to allow present conditions to exist, selling to the jobbers at sufficiently favorable prices to allow them to sell to the retail trade, the manufacturer keeping strictly away from the smaller trade, or, if at times, from the nature of his business, or under certain circumstances, he must sell this small trade, preserve a proper differential in order to protect the jobber, the jobber, by reason of his large quantity purchases, and the fact that he is a distributing medium entitled to such protection.

And this disposition on the part of the manufacturer to protect the jobber should have its consideration. He should buy from the manufacturer in bulk, and in good round lots, paying extra when he buys in broken packages. And he should place bona fide orders or contracts with the full intention of taking out the goods, instead of considering such an order for goods as simply an option to be taken out to the last pound on an advancing market, and to be canceled in case of a decline. It is not on this basis, gentlemen, that the manufacturer buys his material, or pays for his labor.

The guarantee against decline is another consideration that the manufacturer generally gives the jobber, although it is a rare exception when the manufacturer can insert this clause in the purchase of his material.

And yet, notwithstanding the fact that contracts are often options only, and prices are guaranteed, and twenty days is oftentimes mistaken for ten in the discounting of his bills, we must stick to the jobber, and decide in his favor as the proper distributing medium, as we believe he means well, and through the influence of just such gatherings as this, where the manufacturer and the jobber meet on common ground in order to discuss trade questions, we may hope to see the bond of union between them grow stronger.

In conclusion I would say most emphatically and unqualifiedly that the jobber is essential as a distributor, and I hope that all the jobbers here to-day will continue to distribute.

The President called for Mr. F. S. Kretsinger, of the Steel Goods Association, and for Mr. Henry C. Disston, and they were both absent. Mr. J. C. Birge, of the Shovel Association, was called, and said:

Mr. President and Gentlemen:—I am in a worse condition than the gentleman who has addressed you on this subject. I received no notice, but it was not the fault of your worthy Secretary. I left home before the notice had arrived there and it was forwarded to me, and I find my name on the programme of this morning. I have had but a few minutes' thought upon the subject, and it is a subject upon which I have some decided opinions. I will briefly, in a crude way,

as well as I can, give you my thoughts. A few years ago one of the most eminent politicians in the United States—one whose name is a household word—called up President Harrison, and asked for the appointment of a friend to an important position. President Harrison replied that he did not regard the gentleman as a proper person for that position, and was compelled to decline to make the appointment. The politician replied: "Mr. Harrison, do you not know that I was essential to your success in becoming President of the United States, and that as a matter of fact I made you President of the United States?" President Harrison replied: "I had thought that the Lord had also much to do with what occurred in this world, and I believe the Lord made me President of the United States." The gentleman retired in disgust, and walking up the street, soon met Colonel Robert G. Ingersoll, and recited to him the conversation, taking pains to state that President Harrison had said that the Lord had made him President of the United States, and was a party to it, as well as the gentleman who addressed him. Mr. Ingersoll replied: "I have said very many mean things concerning God, but nothing, in my judgment, equaled this."

Gentlemen, and Mr. President, we manufacturers have said a great many mean things concerning the jobber, but it is my opinion that during the whole of this colloquy, no jobber will speak concerning the guests of the hosts who have welcomed us so cordially to this and former meetings, and who, as is the case with most of us, are our only customers, no one will go so far as to say that they are not at least in some degree, essential to our success as manufacturers. There have been some manufacturers who have felt that the jobbers were not entirely essential. There are two or three notable examples which most of us have had in mind—why these manufacturers have reached out and given to the retailers the same prices as they are putting to the jobbers. I think we will find that the jobbers introduced those manufacturers' goods at the outset, and it does not seem quite fair for the manufacturer whose goods have been introduced, after the introduction has become general, for him to then go back to the consumer with an effort to place those goods, but I doubt if such a method will prove successful. I doubt if the retailer can buy as cheaply from the manufacturer in the long run as he can from the jobber, and I will state the reason in a moment. The jobbing business is not entirely a new business. The gentleman who spoke first referred to some ancient history, but it is my understanding that one Joseph, a good many years ago, entered into the jobbing business. I believe he handled corn very heavily. The question is, did he prove to be in any sense a benefit to the consumer or to the producer? I believe that he was a benefit, because the record distinctly states that had it not been for Joseph, that great jobber, the whole country would have starved to death.

The jobber alone can hold in stock the goods needed for the trade, and in a manner that no manufacturer can do, because of its multitudinous assortment.

There were some remarks made at the beginning of this meeting that interested me very much. A few years ago the Confederate General Longstreet visited St. Louis, and during the course of that visit was entertained by the Loyal Legion. He attended a banquet there and, like all others, was called upon to sing a song or make a speech or tell a story. When the gentleman was called upon in his turn, he said: "I cannot make a speech, I cannot tell a story, but, gentlemen, there is one song that I learned in my childhood days; through all the vicissitudes of my life, in war and in peace, I have never forgotten that song—the 'Star Spangled Banner,' and I will sing that song with you to-night."

Gentlemen, these emblems which we see here suggest this sentiment, and the speeches which we have heard at the beginning of this session suggest that sentiment, and when we stand here on this historic soil of Virginia, which has

produced a Washington and a Lee, the honored "Stonewall" Jackson, whose name stands high in history, and when we, as manufacturers, meet the merchants of the United States and also of Canada, it is with a pleasure and honor that we meet with you to shake hands and not to talk business.

The President called for further remarks. On motion, a recess was taken until 2.30 p. m.

As will be noted in the programme, the Wednesday afternoon session was devoted entirely to executive business, consisting principally of the reports of the various standing committees and the reading of communications.

#### THE SMOKER.

The evening of the 21st was devoted to a smoker, provided by the Entertainment Committee, taking place in the Convention Hall, and which proved to be a very enjoyable affair, a number of ladies being present. Local talent was relied upon to furnish the customary music, which was given by a band of darky performers, who gave plantation melodies, and other vocalization in rag time, and assisted as they were by a professional entertainer, made the hours of the evening pass in the most genial manner imaginable. It was voted by all present to be a great success, reflecting much credit upon those who organized it. The usual and customary brew of Gambrinus was the prevailing beverage, augmented by sandwiches and other thirst-creating combinations. Cigars and cigarettes were passed around in lavish profusion and every one present enjoyed the occasion to the utmost.

The Reading Hardware Co., through their representatives, took this opportunity to distribute a souvenir Bronze Medal commemorating the Convention, which was referred to as being a very appropriate selection for the purpose.

The continuation of the proceedings of the Convention will be given in our next issue, the details of the programme for Thursday and Friday being delayed in transmission, preventing receipt before going to press.

#### THE BANQUET.

The festivities of the convention met a crowning climax in the banquet arranged by the Entertainment Committee, which took place on Friday evening. As a social success, it was an affair long to be remembered, details of which are unavoidably left for publication in our succeeding issue. After the good things with which the menu was filled had been discussed and enjoyed in a style worthy of their excellence, President Bindley who was toastmaster delivered the following address:

BANQUET ADDRESS OF JOHN BINDLEY, PRESIDENT OF THE NATIONAL HARDWARE ASSOCIATION OF THE UNITED STATES.

Our convention having been brought to a successful conclusion, we this evening meet amidst the most pleasing surroundings, and it is to be hoped that we will liberally imbibe the wholesome spirit that hovers around us.

This great State of Virginia for three centuries has been prolific in the making of history, the influence of which has been vital in the foundation and development of our country's civilization.

She has given us sons of wonderful talent and ambition; it was her province to bestow on us Washington—the first citizen in the hearts of his countrymen; to her we are indebted for Jefferson, who wrote that masterful article, the Declaration of Independence, which will stand as a monument to his intellectual resources as long as our country exists; within her borders was born the unexcelled orator, Patrick Henry—whilst a long list of statesmen, soldiers and scholars have most honorable mention.

Surely, under such stimulating and elevating influences we cannot fail to be carried into the higher elements of idealism.

It gives me great pleasure and much gratification, as I survey this audience, to note the regularity in the attendance, as well as the interest manifested by our members and manufacturing friends in our annual conventions.

Many of those who attended our initial banquet six years

ago are here to-night, zealous in the discharge of all duties pertaining to the advancement of the association, unflagging in all matters relative to its interest, which, in a great measure, accounts for the success of our work, and to these members we are greatly indebted, for owing to their loyal support and untiring zeal the hands of our Executive Committee have been supported and strengthened, so that with an ever increasing confidence, and stronger assurance, your officers and Executive Committee have assumed, undertaken and successfully solved questions which, in the early days of our existence, seemed wholly beyond the pale of possibility, and at this, our sixth annual banquet, we can felicitate and congratulate each other upon the successful issue of our affairs, for all have added to the result.

In the embryonic state of our organization, and in the early days of its childhood, many of the merchants (who may now be considered our stalwart members and most ardent supporters) held aloof, preferring to await developments before joining or committing themselves to the tenets of the struggling association.

All manufacturers, with possibly no exception, looked askance at the new undertaking; the opinion was generally held and believed that little or no good could come from such an affair. Some reasoned it boded ill to the interests of the trade; others that it was an impossible task to reconcile the different and clashing concerns of districts and sections, as well as the deep-rooted prejudices as they then existed, but by wise and conservative action in the past administration of the affairs of the association, all bias and prejudice of every nature has been overcome, and all sectional lines obliterated. The doubts and misgivings of the manufacturers which existed in the earlier days have been swept away, and in lieu thereof we have their sympathy, encouragement, confidence and co-operation. We have kept the faith by actions and conduct, which speak with much more potent force than words; we have proven that our interests are neither antagonistic, nor inimical, but, on the contrary (as far as a well-defined policy for good of both is concerned), they are identical. Each succeeding year adds additional strength, supplemented by the best of reasons why we should pursue the even tenor of the way already entered upon, ever aspiring for greater and better attainments, with increasing usefulness and value to the trade, whether it be merchant or manufacturer. We can, we should, we must so conduct the affairs of our association that we uplift, benefit and solidify the whole business fabric of our line, merchant and manufacturer alike; then can we constantly expect the greatest good from our organization. Let it be understood we are not philanthropists, nor do we make any pretense of so being, but we realize and are fully aware that the best results can be attained only by working with and through the manufacturer. In organization we have already materially improved the conditions and advanced the position of our merchants; in doing this we have benefited the manufacturer, and by broad, conservative, considerate action it has been demonstrated to the manufacturer that the interests of the producer and distributor are identical, and the mutual confidence so inspired has undoubtedly been for the uplifting of both.

Perfection has not yet been attained, nor has the work so well begun been, by any means, completed. Far from it—for as we progress new avenues open up before us; fresh possibilities become apparent; new features develop; a better and even higher condition is demanded, and we are forcibly impressed with the belief that we are just at the portal of a great work, which, if earnestly and diligently pursued, will eventually lead us up to approved and ideal methods of merchandising. It is not my desire this evening to speak along these lines already touched upon, from a jobber's standpoint only, but rather to take up the all-important question of the direct interest each manufacturer and distributor has in the success and welfare of the other—to

demonstrate that our interests are at all times mutual, and that the highest aims and expectations can only be brought about and fully accomplished by laboring in the spirit with full accord, and with a proper understanding with each other.

One of the prime objects of our association, and one which is clearly set forth in our constitution, is "The promotion of more friendly business relations, mutual confidence and good will with each other and with manufacturers," and to attain this ideal our path and progress has not always been strewn with roses, for frequently the thorns rent us sorely, in many cases requiring mighty, persistent efforts to allay the suffering and heal the wound to attain the present condition of good feeling and fellowship, as it exists to-day between our own members and with the manufacturers. Manufacturer and merchant alike has begun to realize that opposition has given way—half-hearted supporters have become the most enthusiastic advocates—and to-day we are flourishing "like a green bay tree," with possibilities barely dreamed of at the birth of this organization. The accomplishing of this fact, we feel, shows with what earnestness we (The National Hardware Association) entered into the spirit of, and carried out the intentions of the above-mentioned article of our constitution, for it cannot be controverted that the *entente cordiale* to-day existing in our lines between manufacturer and merchant has ever been equaled. We all cheerfully recognize that each has his particular sphere in the business world—the manufacturer to produce, the jobber to distribute. This is most certainly the economical, perfect and ideal method, and this being true we should improve every opportunity for the cultivation of our present manifold interests, which not only will continue in permanent form the success already attained, but which also will enable us, one with the other, to meet fully the coming vexatious requirements of the very exacting conditions of our time.

#### MANUFACTURER'S PROVINCE AND DUTY.

Great diversity of opinion exists among merchants, and even among manufacturers, as to the manufacturer's duty and interest in the protection of such prices as may be placed upon the wares of his production—many holding religiously to the view that when a manufacturer places a price upon his product, with a proper differential allowed the distributor to cover his service, risk and proper return for his investment, he, the manufacturer, has completed his full duty, and that no further protection is necessary, requisite or desirable.

Others contend that the manufacturer has a greater, higher and far more reaching interest in the goods he manufactures, and should and must protect prices on same, because until they reach the hands of the consumer, he cannot afford to lose his concern in them, on account of their sure deterioration. Now, which method is correct, and which is the higher ideal of merchandising? A short analysis will, we believe, assist us in reaching a proper conclusion.

Many merchants—and their views are coincided in by quite a respectable number of manufacturers—reason that upon the purchase by them of any particular article they are permitted, because of their absolute ownership, to be the sole arbiter as to the price they shall market or dispose of same, persuading themselves that once the article becomes theirs through purchase, the producer or manufacturer has no further interest in the matter, evidently overlooking the fact that in many instances an expressed or implied agreement was understood as to the selling price.

Is not this view one of unadulterated selfishness, an ignoring of the producers' rights, and an entire abrogation of the Golden Rule of doing unto others as you would have others do unto you? Will such interpretation and policy permit us to attain the higher method of doing business? We believe they will not.

The manufacturer has, and should always have, a direct and vital interest in the price at which goods of his particular brand or make reaches the consumer. His business repu-

tation, success and existence practically depend upon it. The proper care of his business, and distribution of his products at the present, and more especially its perpetuation in the future, identifies him with an inherent interest which far surpasses that which is possible for any merchant to have. The thoughtful and considerate merchant who keeps constantly before him our motto of "High standard of business methods" should recognize and conform his efforts to the consideration of the rights already touched upon, that is so justly the due of the manufacturer. If these premises are correct it becomes perfectly proper for the maker in conference with the merchant to arrange, adjust and agree upon a proper compensation to be allotted the distributor for the marketing of his wares, and it is his prerogative, and manifest right and duty, to fix the price at which the retail dealer shall vend his products. If his goods are marked too high it means the eventual elimination of them from the market, and if too low the same results will be encountered; therefore how wonderfully important and vital are his interests.

Now what means shall be employed to maintain the proper equilibrium? If prices are too low, the correct and just law of compensation cannot be attained, and as a result of this condition the retailer as well as the jobber (a case of "United we stand" because of mutual interest) commences a systematic method to bring about an enlarged compensation for their services, and the manufacturer, in recognition of the justness of their position, endeavors to meet their views. But how can it be best accomplished, and what alternative has he to bring about that which is so just and desirable to all? He, of course, can make concessions, but only at the expense of a serious inroad upon his profits, which he realizes are now altogether too limited, or he can cheapen the quality of his goods. The acceptance of either proposition is not desired by him; to accept the first may mean the making of such a serious inroad upon his profits, which may result in his retirement from business, or should the second proposition be deemed the wisest method by which to better correct the matter, it must mean the deterioration in quality, which surely sooner or later will bring its own destruction.

We therefore hold that the manufacturer has a most important, direct and vital interest in the price of his goods at retail, as well as in the differentials which are paid to the distributor—in fact, as we see it, so vast is his interest, because his very business existence is at stake, that he should at all times, and under all circumstances, be the arbiter of prices and differentials; especially applicable in his case is the adage, "Self-preservation is the first law of nature." The most important duty he owes is to himself, and that is to fix a proper price, with just differentials, and then enforce without fear or favor their strict observance by both the jobber and the retailer.

To attain the greatest success in marketing the product of mill or factory, it is essential that the *entente cordiale* shall exist between the manufacturer and seller; to satisfactorily bring this about the producer must arrange that the jobber has a fair margin or differential; it must be sufficient to cover his fixed charges, risks undertaken and a fair return for his investment. It should be the bounden duty of the manufacturers to provide and protect the differential, and to cultivate the jobber who is honestly living up to his wishes, and who is earnestly engaged in the promotion of his interests. He is not only entitled to it under reasonable conditions, but should have the protection at any cost; furthermore, those honestly living up to specified arrangements should not be classed with and made to suffer for the acts of the unscrupulous, as it would be more than strange indeed were no black sheep to be found in the ranks of those who enter the field of "Hardware jobbing." Neither should those who are faithfully trying to keep the trust suffer for the acts of those jobbers who take the erroneous method of trying to increase their sales by cutting prices at the expense of the manufacturer, believing that by this subterfuge they can in-

crease their business, at the same time forgetting or overlooking the fact that only one result can follow; all are obliged to meet his quotations, and no advantage arises therefrom, but a great injury done to, and wrong perpetrated on, the merchant, the compensation being in this line for himself and competitors a reduction of profits, or the doing of so much business without compensation.

But as to the manufacturer, how about him? He has been injured more than all. Why? Because no profit being derived from the sale of his product, distributors commence to cast about for another make or line of goods to take the place of the non-profitable commodity; gradually he finds an inroad here, and a falling off there, until finally his trade becomes very much affected, with the result that to save himself heroic measures must be introduced, and experience has taught us how much more easy it is to retain than to reclaim.

Now under the foregoing conditions do you not realize how direct, intense and far-reaching is the interest of the producer of goods? It becomes absolutely essential that he should and must protect his products to no less an extent than that prices should and must be regulated by him, and the differential absolutely controlled. It should be his imperative duty to enforce arbitrary action that may become necessary to protect his own wares, as well as to protect those who faithfully sustain and support his methods, in their disposal, and it is the one great wish of the speaker's heart that the relation between jobber and manufacturer may become so close, so intimate and so confidential that the great business equilibrium of our Hardware line may be so evenly balanced and so correctly adjusted as to bring to all participating therein the greatest, most permanent and satisfactory returns.

William W. Supplee, the first President of the National Hardware Association, was called upon to speak upon the subject of "Opportunities," when he delivered the following interesting address:

BANQUET ADDRESS BY WILLIAM W. SUPPLEE, FIRST PRESIDENT OF THE NATIONAL HARDWARE ASSOCIATION—"OPPORTUNITIES."

Mr. Chairman, Gentlemen of the National Hardware Association, Manufacturers, and Invited Guests:

When informed by the Secretary-Treasurer, whom all manufacturers and jobbers know, and in poetic language, to know is but to love, that the committee had selected me to try your patience for a few moments, he seeing my hesitation, quickly said: "You know we only want a fifteen-minute speech, and that light and airy, for we are to have other speeches which may be long, heavy and classical." A long-winded orator once, giving an excuse for his lengthy speech, said: "You know it tires an eagle less to soar a thousand miles than it does a goose to waddle a hundred yards."

"OPPORTUNITIES"

Is the subject given me for a few moments' talk. The theme is doubtless more especially intended for the junior members of firms and those in the employ of both manufacturers and jobbers. We all realize the fact that in the natural course of events in the not far distant future the younger generation must inherit the responsibilities of both our mercantile and manufacturing industries.

First I will embrace the Opportunity to say a few words about this city and State. When at our last Convention, one year ago, the names of various cities were presented for consideration for the present meeting, our members from Richmond seized the Opportunity, the name of Richmond was presented, enthusiastically received, and soon led in the race. And it is shown both by the number of our delegates and the manufacturers present that no mistake was made, and the number of ladies who have honored us with their presence further shows the wisdom of the selection.

Your city is charmingly situated on the historic banks of the James River, your beautiful surroundings charm the eye, your public buildings touch our admiration, your spacious

hotels do credit to the city, and you should be proud of being the capital of Virginia. This State was one of the most esteemed of the original thirteen colonies, the land and home of General Washington, the beloved hero of our Colonial armies, that severed the yoke of George the Third, King of England, and brought us liberty and independence. The name of Washington is indelibly written on the heart of every true American—the idol of the army because by popular acclaim our first President, and set the pace that all later Presidents have been proud to tread. The land of Presidents, warriors and statesmen, the land of Thomas Jef-

EX PRESIDENT WILLIAM W. SUPPLEE.

erson, equally esteemed as statesman, Secretary of State, Vice-President and President, whose brain conceived and whose hand wielded the pen that drew up the Declaration of Independence.

The home of Patrick Henry. Who has not read his celebrated address at the Virginia Convention in 1775, on the eve of the Battle of Bunker Hill? "The war is upon us, and I repeat it, sirs, let it come, let it come. Is life so dear and peace so sweet as to be purchased at the price of slavery? Forbid it, Almighty God! I know not what course others may take, but as for me, give me liberty or give me death!"

The land of Richard Henry Lee. It was he who introduced the measure, June, 1776, before the Philadelphia Congress, declaring the United Colonies to be free and independent States. The descendants of Richard Henry Lee and his family, passing through generation after generation to the present day, have always maintained the same enviable reputation which distinguished their worthy and noble ancestor.

There are many within the sound of my voice whose personal recollections take them back to the time of the surrender of General Robert E. Lee to General Ulysses S. Grant,

when those two men stood face to face, and Grant, in recognition of his noble qualities, declined the proffered sword, and requested his soldiers to stop cheering: "Stop, my boys," said he; "don't cheer, for we all belong to the same country now."

The annual meeting of the National Hardware Association brings together once each year the representative Hardware merchants and manufacturers, and ample opportunity is given to discuss, criticise and advise. This association has dispelled the illusion of the old maxim that "No two men in the same trade or business can agree." Here we meet some of our now warmest friends whom we once imagined our deadliest foes, and while we still have and always will have rival interests, which sometimes may prove aggressive and intense, "time has tempered the bitter spirit and narrowness of the past," and we no longer associate rivals with enemies or rascals, but join hands in friendship and throw wide open the doors of our social circles. The betterment of trade ethics has been our aim and desire. But great undertakings cannot be perfected by the struggles of an individual or firm. One hundred and forty thousand workmen, comprising men and boys from different nations, speaking a dozen different languages, during the recent coal strike in my own State, where these men stood shoulder to shoulder for greater remuneration, demonstrated the wonderful power of organization. But it would neither be wise nor necessary for merchants or manufacturers to resort to means of that nature. Arbitration between manufacturers and jobbers is both laudable and possible, and with honesty of purpose and cool heads and warm hearts to guide us, we should always be able to solve these business problems.

An illustration of Opportunity is represented in an ancient Grecian epigram, being in the form of a conversation between a traveler and a statue:

"What is thy name, O statue?" "I am called Opportunity." "Who named thee?" "Lycippus!" "Why art thou standing on thy toes?" "To show that I stay but a moment." "Why hast thou wings on thy feet?" "To show how quickly I pass by!" "But why is thy hair so long on thy forehead?" "That men may seize me when they meet me!" "Why, then, is thy head so bald behind?" "To show that when once I have passed by I cannot be caught."

John J. Ingalls' poem on Opportunity is not an unreal illustration:

"Master of human destinies am I!  
Fame, love and fortune on my footsteps wait.  
\* \* \* \* \*  
And passing by, soon or late  
I knock unbidden once at every gate!  
If sleeping, wake; if feasting, rise before  
I turn away. It is the hour of fate,  
And they who follow me reach every state  
Mortals desire, and conquer every foe  
Save death; but those who doubt or hesitate,  
Condemned to failure, penury and woe,  
Seek me in vain and uselessly implore;  
I answer not, and I return no more."

Glancing over the country, letting your eyes rest on the various large cities, you will find heads of firms still in attendance, who have passed through the ordinary work of subordinates, stock clerks and traveling salesmen. Indeed, I venture the opinion that two-thirds of all the heads of firms of the wholesale houses in the United States have reached their position through the same experience.

Edward Noyes Wescott, in his character of David Harum, says: "Every hoss c'n do a thing better'n spryer if he's been broke to it as a colt."

In a conversation between Gus and Max, says Gus: "Say, Max, ain't you got no friends?" Max: "No; I don't need no friends." Gus: "But if you don't have no friends, who is going to tell you all the bad things about yourself?"

To borrow ex-President Cleveland's expression: "It is a condition, not a theory, that confronts you." Admittedly, "the constant dropping of water wears away the stone," but

everlasting hustling is the secret of success.

Capacity and ability have never been more generally recognized and allotted to their appropriate position than is the case to-day. The business houses are on the lookout for capacity, intellectual attainments, restless energy and thought, and for those who will make a study of all the details of their business. Yet I venture the opinion (and this has been hundreds of times expressed by other business men) that not one young man in a hundred, at ages ranging from nineteen to twenty-four, nor one salesman in fifty, realizes the opportunities that may have been more than once within his grasp.

Carlyle said: "The race of life has become intense; the runners are treading on each other's heels; woe be to the man who stops to tie his shoe-strings!"

No set rule can possibly be given to apply to each individual case. Remember, "The highest towers begin from the ground," and "Every man gives a shove to the tumbling wall." There are underlying principles, however, applicable to all cases; conscientious honesty and integrity of both mind and purpose, and unflinching determination, energy and will power, of which Mrs. Wilcox says:

"There is no chance, no destiny, no fate,  
Can circumvent, or hinder, or control,  
The firm resolve of a determined soul.  
All things give way before it soon or late.  
Why, even death stands still  
And waits an hour sometimes for such a will."

These essential qualities have broken the chains of poverty and obscurity, placed kings upon thrones, turned apparent defeat of armies into victory, made presidents and statesmen. Yes, far more than all, brought victory to our Colonial armies in the dark days of our American Revolution. It was the present President of France who said: "Tell the young men of America they should be proud of their country and their opportunities." "While," said he, "my boyhood was one of toil and hardship, your martyred President, Abraham Lincoln, whose character and ability I so much admire, was born and raised under the most surprising difficulties and hardships, compared with which the lot of our poorest peasants is one of comparative luxury."

The development of the Southern cotton mill industry during the last few years is a notable example of my text. During the years of depressed trade and reduced output, strikes and lockouts closed the doors of many of the Northern and New England factories. The South grasped the Opportunity with the result that to-day five hundred cotton mills, representing an investment of over one hundred and thirty million dollars of capital, are in operation, one million of men, women and boys dance in attendance to the whirl and music of five million spindles, which yearly transfer into cotton cloth one and a half million bales of cotton.

Our nation must and will progress, and to this end each generation is entrusted with an allotted task. Each generation since 1776 have faithfully fulfilled this entrusted mission. The flag of our nation, then showing thirteen colonies, now furls to the breeze forty-four stars; the five million people of 1800 has increased in 1900 to over seventy-six million.

And are your opportunities less than they were one hundred years ago, when men traded jack-knives for dried apples and an unborn calf was swapped for tea or coffee? Or sixty years ago, when a boy stood in the cellar with chapped hands and cold feet for half an hour to coax out of a hogshead a quart of molasses, the then usual luxury for the breakfast table? When men in Conestoga wagons spent one week in carrying their merchandise from Philadelphia or New York to Ohio, and day after day worked so far into the night that they could almost shake hands with themselves returning the next morning, and satisfied if at the end of the year they could show two or three hundred dollars above their living expenses? But don't become panicstricken because steam, electricity and telegraph and telephone wires have revolu-

tionized the mail service, the stage coach and Conestoga wagons. The centralization of capital and combining of large interests or plants may for a time harass the smaller industries, catalogue houses may for a time embarrass the legitimate retail trader, department stores may under one roof usurp trade heretofore scattered, but in my opinion American ingenuity, determination and push will, as heretofore, continue as rivals and contestants, and in my opinion no one within the sound of my voice will live to see the day when either the jobber or retail merchant's business or usefulness can be dispensed with.

And now, my boys, remember the toast of the old American Commodore: "Our Country, may she always be right, but right or wrong, Our Country."

#### A STRONG WESTERN DELEGATION TO THE CONVENTION.

The growing interest taken by the manufacturers and their representatives with each successive convention was never more abundantly manifest than in the present convention. Arrangements were early instituted by a committee having the matter in charge, representing several Western jobbing houses and others desiring to go to Richmond, who arranged for the railroad facilities and other conveniences, the party occupying two special cars, which were connected with a regular train on the Pennsylvania Railroad, leaving Chicago on Monday the 19th inst., at noon, direct to Washington, where the remainder of the trip to Richmond, it was in contemplation, should be taken over the S. A. L. Railway. The stay at Washington was of more limited duration than was intended, on account of a detention on the way, causing a delay of several hours. But many of the points of interest were visited nevertheless. The social features of the trip proved of the most enjoyable character, resulting in a number of speeches being given by some of the happy participants, W. S. Wright, of the Rector & Wilhelmy Co., Omaha, Neb., setting the pace, followed as he was by the members of the Committee of Arrangements in short responses. The following are the names of those participating:

Rudolph Tenk, Tenk Hardware Company, Quincy, Ill.  
 J. A. Warner, Wyeth Hardware & Mfg. Company, St. Joseph, Mo.  
 F. H. Hill, Empkie-Shugart Hardware Company, Council Bluffs, Iowa.  
 C. A. Knapp, Knapp & Spencer Hardware Company, Sioux City, Iowa.  
 W. H. Harwi, A. J. Harwi Hardware Company, Atchison, Kan.  
 C. E. Otto, Drake Hardware Company, Burlington, Iowa.  
 J. S. Hayes, Huber & Kalbach Company, Oskaloosa, Iowa.  
 Laurence Gotfredson and A. Benjamin Gotfredson, Gotfredson Bros., Green Bay, Wis.  
 H. J. Lee and W. M. Glass, Lee-Glass-Andreeson Hardware Company, Omaha, Neb.  
 J. C. Kroner, Fred. Kroner Hardware Company, La Crosse, Wis.  
 A. D. Baker, Baker Hardware Company, Sioux City, Iowa.  
 F. H. Jack, Isaac Walker Hardware Company, Peoria, Ill.  
 F. E. Smith, Clark, Quien & Morse, Peoria, Ill.  
 W. S. Wright, Rector & Wilhelmy Company, Omaha, Neb.  
 T. G. Walther, C. W. Hackett Hardware Company, St. Paul, Minn.  
 E. D. Hockaday, Hockaday Hardware Company, Wichita, Kan.  
 D. B. Woodbury, Chicago representative Stanley Works, New Britain, Conn.  
 S. S. Gould, vice-president St. Louis Shovel Company, St. Louis, Mo.  
 W. H. Bennett, Chicago manager Reading Hardware Company, Reading, Pa.  
 F. C. Baackes, general sales agent, and D. A. Merriman, assistant general sales agent, American Steel & Wire Company, Chicago.  
 H. A. Taylor, Chicago representative American Screw Company, Providence, R. I.  
 W. A. Campbell, Wadsworth-Howland Company, Chicago.  
 A. C. Wagner, Chicago representative Stowell Mfg. & Foundry Company, So. Milwaukee, Wis.  
 W. C. Heimbeucher, manufacturers' agent, Chicago.  
 R. B. Mumm, Chicago representative American Wringer Company, New York.  
 D. W. Simpson, Wilcox Mfg. Company, Aurora, Ill.  
 J. D. Warren, J. D. Warren Mfg. Company, Chicago.  
 W. G. Miller, Chicago representative Ohio Tool Company, Columbus, Ohio.  
 Edward Dunning, Chicago representative Sargent & Co., New Haven, Conn.

A. A. Norton, Chicago, official stenographer of the National Hardware Association.  
 A. B. Conover, Chicago manager Jno. A. Roebbling's Sons Company, Trenton, N. J.  
 H. H. Roberts, Chicago manager *The Iron Age*.

#### Third Edition of American Trade Index.

The National Association of Manufacturers of the United States of America, general offices 48-50 The Bourse, Philadelphia, have recently issued the third edition of their American Trade Index, and it is by far the most important work undertaken by the publication department of this Association. It is now in course of distribution throughout the world. The first edition was printed in English, and the second edition in Spanish, and these, by a wide and wise distribution, have established the reputation of this book, preparing the way for a welcome reception of the current edition, which far exceeds its predecessors in size, completeness and circulation. In this volume before us all the matter appears in both English and French, and the use of these two languages is so nearly universal that the book is practically available in every country in the world. Even the translation of technical terms and names of articles into French has been done with the utmost care, so that this edition of the Index will be regarded as a technical dictionary of English-French terms, and be valued accordingly. The book is a handsome cloth-bound volume of 725 pages, and is filled with information that is desired by every foreign buyer. Consequently, no such fate as being thrown into the wastebasket, or laid aside with publications of transient interest, could possibly occur. It should be, and doubtless will be, kept within reach of the merchant who has been fortunate enough to be presented with it, consulted frequently, and be found virtually invaluable. The book is distributed gratuitously to a selected list of the best foreign buyers who are known to the National Association of Manufacturers. There is no random distribution, every name is carefully considered, and many applicants for the book have been refused through lack of evidence that the applicant is properly entitled to a copy. It is designed for foreign circulation only. Should a copy be desired by buyers in the United States, a charge of \$5 is made for such local distribution, but to the foreign business houses the book is given entirely free of charge. It gives the appearance in many lines of being incomplete, but as the names of members of the Association only are included, it will readily be understood why this should be the case. Should it have the effect of increasing the number of the members of the Association so that this weak feature in connection with it would be remedied in the next volume, it will have done good missionary work that cannot but make large increase in membership.

C. E. JENNINGS & Co., 101 Reade Street, New York. Pamphlet catalogue of 24 pages, same size page as their general catalogue, and designed to cover their line of Tool Chests suitable for boys, youths, gentlemen, machinists, etc. Having been leading manufacturers for a long time of a large variety of tool chests of every description, ranging from the cheapest styles to the more elaborate and desirable articles possessing merit, they are now showing in this catalogue a very extensive line, not only of tool chests that are stocked with tools, but also empty chests in a variety of styles and sizes. In an article elsewhere in our columns, we have called attention to their special machinists' and jewelers' tool chests, which fully represent the finer grades of goods of this description. This is a desirable catalogue for the Hardware dealer to write for, as he will find embodied in its pages a larger assortment of such goods than are usually found in any similar publication.

"How do you get along with your new hired girl, Mrs. Upjohn?"

"Well, of course, one can't always be certain in such matters, but we seem to please her."—*Chicago Tribune*.

### The Credit Man and the Traveling Man's Contract.

We have before us the copy of a contract made by a certain traveling man with a customer to whom he had just sold a bill of goods, upon which the traveler, while the ink was still wet, doubtless looked with admiration as expressing in the briefest possible form exactly what he intended to say; but when it reached the credit man of his house, and particularly when the account became, as the credit man understood the contract, due, there did not seem to be so much reason for gratulation.

The clause of the contract relating to the time of payment read as follows:

"The goods ordered herein to be settled by note due in two months from date of invoice; all on hand at end of two months to be credited on note given and new note given for like amount due in four months without interest."

Naturally enough, the purchaser, at the end of two months from the date on invoice, claimed four months more time on the goods remaining unsold; but this was not what the traveler had intended; he claimed that the note was to be due four months from the date of the invoice.

The question naturally arises, if that was what he meant, why did he not say so? The man who draws up a contract must cultivate the ability to detect in the forms of expressions which he is tempted to employ, other meanings than those which he intended to put into them. If he makes an agreement providing for "payment in four months," he certainly ought to know that unless he is careful to state the beginning of the period very clearly, the other party to the contract will claim the interpretation which is most favorable to his own interests.

It may be said that this is a question for the school master rather than for the credit man; that what is required is the ability to write good, plain, unmistakable English. That is exactly the point. The traveling man must cultivate that ability. If he missed the training while a schoolboy, he must make it up by extra care now.

A young Kansas lawyer has convinced himself that the decrease of business for lawyers is due to the increase in general culture; that men carefully trained in the schools are less likely to find themselves in a position where the advice or assistance of a lawyer is necessary than one who has not availed himself of such advantages. We think he is right. Certainly, the traveling man whose "mind's eye" is keen to detect the various constructions that may be placed upon an ambiguous sentence will find that the contracts made by him involve his house in less differences of opinion with the customers than will he who is content to write what he thinks will express his intention, and leave the credit man to fight it out.

*The Credit Man.*

### Jobbers' Modern Methods—The Order Department.

We wish we could show each one of our readers our order department on a busy day. We believe it would give you more confidence in our ability to handle your business. Suppose we try to describe it to you.

Here we are in a long, well-lighted room with a counter running down the centre. At one end stands the manager of this department at his desk, rapidly sorting over the orders which have just come to him with the credit man's approving stamp and the general manager's notations hardly dry. The three elevators shoot rapidly up and down, receiving and discharging their loads, while busy order clerks push about wheeled boxes full of goods collected from every part of the house, and sort and arrange the items called for by the orders in their charge.

Soon there is a lull in the activity and the clerks are all called to the manager's desk. Here lie the orders in different piles according to the railroad over which each will be shipped. Now they are handed to the order clerks, each

clerk being given orders for the same road each day in so far as possible, so that he soon gets to know the requirements of that particular section and even the preferences of individual customers whose orders he handles often.

As soon as the orders are distributed they are at once entered in the record book and the time at which they are received noted opposite each one. When the order has been filled and is packed ready for shipping, it will be checked off in this record, so that the foreman can tell at a glance how many orders are uncompleted in the hands of the clerks, and just how long they have been in the house.

Here is an order with a bright red slip attached to it. The clerk seems to give it particular attention. Let us look more closely. Ah! it is a rush order. The slip is marked in large letters: "Quick Shipment! This order takes precedence of regular business; get it off within half a day of the time it reaches the order department." These slips are attached to the "rush" orders before they reach the order department, and follow them through this department, through the hands of the packer, down to the shipper and everywhere the red slip gets first place. Whoever handles that order does his best to see that it reaches its destination with the least possible delay.

Now we see a man hurrying round and inspecting the various orders. He is the shipper. Over each order as it lies on the counter ready for packing hangs a sign, indicating the railroad over which it will be shipped. The shipper directs the packers now here, now there, making up a load first for one depot, then for another, always keeping an eye out for a "red slip," or an "express" sign. Presently we hear the clatter of the stencil machine as it cuts out the name and address of the consignee so that the boxes may be plainly marked and in no danger of going astray. Soon the shipping slip is made out, the bulky goods from the upper floors which are indicated on it are collected in the shipping room and the entire order is loaded on the wagon and sent off to the depot.

While this is going on, boys are coming in and going out continually with "pick up" items from round the city, while the telephone bell keeps up its incessant clangor, and the voices of the "callers back" checking over the completed orders add to the din. And so it goes. As soon as one order is completed another is taken up, and there is no let up in the ceaseless activity until the bell rings for the half hour for lunch at noon, or the end of the day's work.

We wish we could show it to you—how all the orders, large or small, are laid out, checked over, called back, packed and shipped, and the system we employ in doing it. But if we can't show all our friends the workings of our system, we can show you the results, and when you send us an order you know that it will be "pushed through" as quickly as possible, and will reach you as soon as well-directed energy can get it there. LOGAN-GREGG HARDWARE CO. in *Hardware Hints*.

### The South African Markets for American Products

The editor of the British and South African Export Gazette has been stirring up the British and South African public on the fact that American manufacturers are making rapid headway in the markets of Africa. In a letter to the leading publication in London, and republished in the British and South African Export Gazette of November, 1900, just received by the Treasury Bureau of Statistics, he says:

"For the information of your readers, I append herewith a lengthy list of some orders lately executed, or now being executed, in America for Cape Colony. My data may not be exact as to quantities, etc., but the fact remains that such orders have been, or are in process of being, executed.

"In December, 1897, American makers had in hand orders for 60 saloon carriages for the equipment of the eastern section of the Cape Government railway, and in that month six

50-ton locomotives were delivered at the Cape Government railway works from the Baldwin Works of Messrs. Burnham, Williams & Co., Philadelphia.

"In March, 1896, six improved Pullman cars were landed at Cape Town for the Cape Government railway.

"In July, 1900, several Baldwin locomotives were delivered at Cape Town in part completion of Cape Government contracts. In that month, according to the general manager of the Cape Government railways, there were still 39 engines and about 160,000 pounds sterling worth of trucks and other rolling stock on order in England and America. Four engines built by Messrs. Dickson & Co., Philadelphia, for the Selati railway, have been acquired by the Cape Government, and are now running on the Wynberg branch.

"In September, 1900, the Union Switch & Signal Co., of Pittsburgh, U. S. A., had in hand a large order for special frogs and switches for the Cape Government railways, and several side tank engines from the Baldwin works were daily expected to be delivered at Cape Town for the railways.

"In September, 1900, the Pressed Steel Car Co., of Pittsburgh, U. S. A., had in hand an order for the Cape Government railways for several steel platform cars of 40 tons' capacity.

"Apart from these items it is significant that for the year ending June 30, 1899, the United States of America shipped 40,691 tons of steel rails to South Africa (value 160,000 pounds sterling), as against 3105 tons (value 13,141 pounds sterling), in the previous year. In the estimates of the Cape Government for the current year the sum of 645,802 pounds sterling is put down for rolling stock, locomotives, etc., but nothing is, of course, said as to where these large orders will be placed.

### Pipes and Pipe Makers.

In the lower part of this city on the east side there is a row of shops and stores in front with a narrow sidewalk and another row of factories behind. There are many curious things made in these factories, which front on small areaways and old time courts. Silverware, canes, badges and small machinery of all kinds are made there. Besides there are several pipe factories. One of the most interesting of these pipe factories is in a room on the first floor lighted by two windows which never have a ray of sunlight. The man in charge of the factory was born in Austria and learned the profession which his father had before him. He is a man well along toward sixty years of age, with gray hair and mustache. He wears a pair of gold-rimmed spectacles, and when he works puts on gold-rimmed eyeglasses over them. He is very proud of his business.

"My father lived in Vienna in the old time," said he. "He was a genius. He passed six examinations in his profession, in amber, meerschaum, rubber, ivory, wood and metals. At that time a man had to serve an apprenticeship for a long term before he became a journeyman; then he had to travel around and see the world before he was allowed to open a shop. My father had a natural genius for his profession, and passed the examinations without having to serve an apprenticeship. He proved that he was not an apprentice."

There are many things in the back room which show that both the father and the son were geniuses in their profession. There is the cap of a tool handle in which the man who has charge had made a set of chessmen. The box is one and a quarter inches in diameter by half an inch in height. There is room in it for the whole set. He has things which he made when he was fifteen which show the kind of an apprenticeship he went through.

He does not show these things to all of his customers, but he keeps them put away in a cabinet with a number of carved objects. One of them is an amber skull. It is less than three-quarters of an inch high, but the bones and articulations are distinctly marked. The carving is so fine that a magnifying glass has to be used to see it in detail. Another is a holder, where a monk with a hollow head for cigarettes is

laughing, but it requires a magnifying glass to see the lines of his mirth. One of the best pieces of carving, which also inculcates a moral lesson, is a skull as a base for a wine bowl. A snake crawls around the skull and holds the wine bowl in place. The wine bowl is hollowed out for cigarettes. The most costly of the pipes represents a mermaid holding a conch shell close to her breast. Her scaly tail is twined about a large branch of white coral, which will become brown when the pipe is smoked. Each scale is perfect. The mermaid has much more expression in her face than have some of the big statues in Central Park, though there is hardly half an inch of meerschaum on which to carve the lines.

The man in charge had a pride in his work. He took the reporter in his workroom and showed him the raw amber and meerschaum, the half finished pipes and the finished carvings. The meerschaum comes from Turkey in boxes. A box holds about fifty pounds and is worth from twenty to three hundred dollars, according to the size and quality of the pieces. It looks like plaster of paris smoothed off and rounded. The amber looks like beeswax or large pieces of resin. It comes in pieces, and is worth from two to fifty dollars a pound. Meerschaum to make a five dollar pipe costs about two dollars and a half. The amber tips raw cost about one-quarter or one-half as much.

When an order comes for a pipe the proprietor goes through the stock of meerschaum to get a piece out of which the pipe can be cut with as little loss as possible. Four-fifths of the meerschaum is wasted, though the chips are often saved and made into imitation meerschaum pipes. The meerschaum is first cut on a circular saw into a piece a little larger than the pipe. If the cutting shows holes or cracks the piece is cast aside. Then it is soaked in water for fifteen minutes and cut the rough shape with a knife. Then a hole is drilled through it and it is turned with a half motion. After the turning the stem is inserted. It is smoothed off when dry, boiled in wax, and polished; then it is ready to be sold.

The amber is worked with a chisel and turning wheel. The chisel is sharp and razorlike. A clumsy operator would cut his fingers off with it. An old operator takes the piece of amber in his hand and rounds it with the chisel, the forefinger of the left hand serving as a guide for the chisel to play. When it is rounded it is held against the face of a roughened wheel until it is turned to approximately the required size. Then it is put in the same turning wheel and a hole is bored through it. This is for the more common and cheaper amber stems, the kind that are put in briarwood pipes which sell for fifty and seventy-five cents. It does not take more than a quarter or a half hour to finish one of these stems. A stem for a more costly pipe will take a day. The shortest time in which a good meerschaum pipe can be made is three days. That is for a plain pipe. If the pipe is to be carved that time has to be added. Workmen have spent months in carving one pipe.

The dust and chips from the amber and meerschaum are saved. The amber dust is melted and made into amberine. The meerschaum dust is chopped up and worked into a paste, from which imitation meerschaum pipes are made. It is a common idea that real meerschaum can be told from imitation meerschaum by the fact that real meerschaum floats on water, but imitation meerschaum floats also. Imitation meerschaum can be made which will color better than real meerschaum does, though it does not last so long and the color is likely to come in streaks. It is hard for a man who is not in the business to tell a real from an imitation meerschaum.

It is hard to make an estimate of the cost of a pipe from the cost of the materials, as so small a proportion of the raw material can be used. To get a stem for a big pipe a whole box may be gone through without finding any suitable piece. The best quality of meerschaum frequently has air holes and cracks in it.

A visit to this factory would repay any smoker. There are the original boxes in which the amber and the meerschau come, pipes partly finished and pipes almost finished, and if you get on the right side of the proprietor he will show you carvings of which he has been proud since he was a boy. One of them, which is tenderly wrapped up, he carved when he was fifteen years old. While he was showing it to a man a few weeks ago a piece was broken off. The piece is a chip hardly as large as a big pinhead, but it has been tenderly put away with the original carving in the box where it was placed more than thirty years ago.

### Why Envelopes are Redeemed and Stamps Are Not.

Some people have an idea that the Government redeems postage stamps when from any cause they become unfit for use or are difficult to use. Frequently sheets of stamps are stuck together, or are torn or injured. The loss, if any, falls upon the owner, as the Government refuses to assume any responsibility of stamps when once sold. The agents of the Government, the Postmasters, can redeem stamps which they have for sale, if through any accident they become unfit for use. But when the citizen buys a stamp he either uses it in the legitimate way or else he is out the value of the stamp.

The Government, however, redeems stamped envelopes. If one should happen to be misdirected or should become blotted, or for any reason a person should wish to tear open a stamped envelope after he had sealed it for mailing, he can bring it to the Post Office and get a brand new envelope in its place. The reason for this difference in the treatment of the adhesive stamp and the stamped envelope is that the adhesive stamp can be used and then washed and passed as good, unless a careful scrutiny is made. If the Government should begin the practice of redeeming adhesive stamps, the opportunities for fraud would be increased. Then the adhesive stamps are manufactured at a cost to the Government, which the stamped envelope is not. The stamps are furnished to the public at the face value, and out of this has to come the cost of manufacture, but in the case of stamped envelopes they are sold at their face value, plus the cost of manufacture.

### Annual Production of Grindstones and Oilstones.

The last annual report of the Geological Survey of the United States, compiled by E. W. Parker, includes some extremely interesting information concerning the production of grindstones, oilstones, whetstones, etc., to be found in this country. The following extracts will indicate the importance of this production:

Grindstones of domestic manufacture are obtained from the sandstone deposits which extend along the shores of Lake Erie for some distance east and west of Cleveland, Ohio, and as far inland as Marietta, and on Lake Huron above Detroit, Mich. In "Mineral Resources" for 1896 the methods of manufacture and use are given in detail, together with a tabular statement of the several varieties, foreign or domestic, that occur, with their special uses. Five varieties are produced in the United States—four in Ohio and one in Michigan. The four in Ohio are: 1, Berea, fine sharp grit, used especially for sharpening edge tools; 2, Amherst, soft loose grit, for edge tools and saws; 3, Independence, coarse sharp grit, for grinding springs and files and for dry grinding of castings; 4, Massillon, also coarse sharp grit, for large edge tools, springs, files and dry castings. The Huron (Michigan) stone has a fine sharp grit, and is used for sharpening edge tools when a very fine edge is required.

With the exception of 1882, the value of the grindstones produced in 1899 was the largest in the history of the grindstone industry. The statement of production in 1882 was based on "estimates" furnished by correspondents familiar with the industry. It is probable that such estimates

were exaggerated, and that the record for maximum production belongs to 1899. There is no way of correcting the estimates for the earlier years, however, and last year must stand as second to 1882.

Compared with 1898 the value of the grindstones produced in 1899 exhibits an increase of \$185,817, or 38 per cent.

The rough material from which our oilstones, etc., are made is obtained from various localities in the United States. The finer grades of oilstones are made from two grades of novaculite quarried in the vicinity of Hot Springs, Ark., and known, respectively, as "Arkansas" and "Washita" stone. Fine grained sandstone, called "Hindustan" or "Orange" stone, from Orange County, Ind.; Lake Superior stone, quarried in Cuyahoga County, Ohio, and a similar material, known as Labrador stone, from Cortland County, N. Y., and chocolate stone, from Lisbon, N. H., are used for whetstones. Scythestones and rubstones are made from Indian Pond and Lamoille stone, quarried in Grafton County, N. H., and Orleans County, Vt.; from Berea, Ohio, grit (which also furnishes grindstones), and from some of the Indiana sandstone.

The value of the oilstones and whetstones made in the United States was the maximum in our history. As compared with 1898, there was an accentuated value of \$27,797, or 15 per cent.

### What to Do With Unused Railway Tickets.

Some men with unused railroad tickets on their hands sell them to scalpers, while others go to the railroad company that issued them and obtain their value in money. Most persons, however, do neither and accept the loss when the ticket is worth less than a dollar. Indeed, many persons do not realize that the railroad companies stand ready to redeem unused tickets even of small value, so that the companies must be richer by many thousands of dollars a year through this ignorance.

Every railroad ticket bears the name of the general passenger agent and of the general manager of the road. It is a simple matter to inclose the ticket with a letter directed to the general passenger agent asking him to refund the money paid and explaining the reason why the ticket is left unused in the hands of the purchaser. It is courteous to inclose a stamped envelope in which the money may be returned.

When all these things have been done the company generally acknowledges the receipt of the ticket holder's communication and promises to investigate the matter. The investigation consists in the proper identification of the ticket by the agent who sold it, and a little bookkeeping to set the accounts right. Then the purchaser receives a check for the amount due from the railroad company, along with a letter requesting acknowledgment.—*Exchange*.

HIBBARD, SPENCER, BARTLETT & Co., Chicago, Ill. Pamphlet having reference to Wall and Window Displays of Fall and Winter Woods, containing twelve half-tone illustrations of sample boards of seasonable goods, together with hints and suggestions concerning Hardware display advertising. This is a very valuable and desirable publication for those who have realized the importance of making superior window displays, artistically constructed, of the principal features of the Hardware business. They have evidently been prepared by a master hand who has selected from an incongruous variety of articles very handsome displays that would impress the observer forcibly. In connection with the displays, a full description is given beneath each cut of the articles that compose the assortment shown. This feature is a desirable one, as it makes it comparatively easy for the directions to be followed.

Of the 4,110 varieties of flowers known and cultivated in Europe, scarcely 400 have any odor, and of these nearly fifty have an odor which is, if anything, disagreeable.—*Ex.*

## REVIEW OF THE MARKETS.

**Wire Nails:** The demand continues to be a satisfactory one for this important staple, larger orders coming to the front than has previously been noted. Quotations are as follows, f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in 10 days:

|                              |        |
|------------------------------|--------|
| To jobbers in carload lots   | \$2.20 |
| less than carload lots       | 2.25   |
| To retailers in carload lots | 2.30   |
| less than carload lots       | 2.40   |

New York prices continue without change, being well sustained. Quotations remain as follows:

|                                    |                |
|------------------------------------|----------------|
| To retailers, carload lots on dock | \$2.48         |
| less than carload lots on dock     | 2.55           |
| Small lots from store              | \$2.60 to 2.65 |

**Cut Nails:** The Cut Nail market is well sustained, demand being a fair one. The supply has not been of a kind that would indicate large stocks at the mill. The following quotations represent the market, f. o. b. Pittsburgh, terms 60 days, 2 per cent. off in 10 days:

|                                        |        |
|----------------------------------------|--------|
| Carload lots                           | \$1.95 |
| To jobbers in less than carload lots   | 2.00   |
| To retailers in less than carload lots | 2.10   |

New York quotations are as previously reported with a satisfactory movement:

|                                                |                |
|------------------------------------------------|----------------|
| To jobbers in carload lots on dock             | \$2.13         |
| less than carload lots on dock                 | 2.18           |
| To retailers in less than carload lots on dock | 2.31           |
| Small lots from store                          | \$2.30 to 2.35 |

**Barb Wire:** But little change is noticeable in the conditions of the Barb Wire market. Demand has been a good one from some parts of the country, but somewhat dull in other sections. The orders for export trade, however, satisfactorily hold their own. Prices remain as previously quoted for domestic trade, as follows, f. o. b. Pittsburgh, net cash 60 days, or 2 per cent. discount for cash in 10 days:

|                                                 |        |
|-------------------------------------------------|--------|
| To jobbers in carload lots, Painted             | \$2.50 |
| Galvanized                                      | 2.80   |
| To jobbers in less than carload lots, Painted   | 2.55   |
| Galvanized                                      | 2.85   |
| To retailers in carload lots, Painted           | 2.60   |
| Galvanized                                      | 2.90   |
| To retailers in less than carload lots, Painted | 2.70   |
| Galvanized                                      | 3.00   |

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden 10 cents per 100 pounds higher than the prices above named.

**Plain Wire:** There has been a very fair business done of late in Plain Wire, and with nothing to indicate any lower quotations being possible at present, orders are quite encouraging in volume. Quotations may be quoted as follows, f. o. b. Pittsburgh, terms 60 days, or 1 per cent. discount for cash in 10 days:

|                              | Base sizes. |        |
|------------------------------|-------------|--------|
|                              | Plain.      | Galv.  |
| To jobbers in carload lots   | \$2.15      | \$2.55 |
| less than carload lots       | 2.20        | 2.60   |
| To retailers in carload lots | 2.25        | 2.65   |
| less than carload lots       | 2.35        | 2.75   |

Above prices are for the base numbers, 6 to 9. The other numbers of Plain Wire and Galvanized Wire take the several advances noted in the following table:

### PLAIN FENCE WIRE ADVANCES (CATCH WEIGHTS.)

| Nos.       | Base                     | Galvanized.   |
|------------|--------------------------|---------------|
| 6 to 9     | \$0.06 advance over base | \$0.40 extra. |
| 10         | .10                      | .40           |
| 11         | .15                      | .40           |
| 12 and 12½ | .25                      | .40           |
| 13         | .35                      | .40           |
| 14         | .45                      | .75           |
| 15         | .55                      | .75           |
| 16         | .75                      | 1.00          |
| 17         | .85                      | 1.00          |
| 18         |                          |               |

**Carriage Bolts, Machine Bolts, Etc:** Another advance in the prices of Carriage Bolts, Machine Bolts, etc., was made on the 22d inst., and prices on this line for ordinary quantities are now as follows, terms 60 days, or 2 per cent. discount for cash in 10 days:

|                        |              |
|------------------------|--------------|
| Common Carriage Bolts  | .70 & 5%     |
| Bolt Ends              | .70, 10 & 5% |
| Machine Bolts          | .70, 10 & 5% |
| Lag Screws, Cone Point | .80 & 5%     |
| Coach Screws, G. P.    | .80%         |

**Cordage:** The demand for rope has been increased materially since our previous issue, and is now held at higher quotations, the following representing the market at the present time:

|                               | Pounds. | Cents. |
|-------------------------------|---------|--------|
| Manilla, 7-16 inch and larger | 10      | 10½    |
| ¾ inch                        | 11      | 7      |
| Sisal, 7-16 inch and larger   | 7       | 7½     |
| ¾ inch                        | 8       | 7      |
| ¾ inch and 5-16 inch          | 7       | 6½     |
| Lath Yarn, Medium and Coarse  | 7       | 5½     |
| Jute Rope No. 1               |         |        |
| No. 2                         |         |        |

**Linseed Oil:** The Dean Linseed Oil Co., under date of November 15th, quote as follows:

|                                                                                |                      |
|--------------------------------------------------------------------------------|----------------------|
| In lots of less than 5 barrels                                                 | 68 cents per gallon. |
| In lots of 5 barrels or more                                                   | 67 cents per gallon. |
| The five barrel price only applies to deliveries of that quantity at one time. |                      |
| Boiled Linseed Oil, 2 cents per gallon higher than Raw.                        |                      |
| Calcutta Oil, 85 cents per gallon.                                             |                      |

### THE PHILADELPHIA TRADE.

The Presidential election is now a matter of history, but the results in the business world of this election have been most surprising. The stock markets have reflected the state of business which almost everywhere has shown a decided impetus and increase.

Although the weather is extremely mild and summerlike, seasonable goods are moving in good volume, and there seems to be a general confidence in the situation.

During the past few days there has been a notable spurt in prices. Manufacturers are, in many cases, declining to enter orders except for immediate shipment, while, in some lines near the raw material, there have been some sudden advances. Particularly is this true of Carriage Bolts, Machine Bolts and Coach Screws, which have made three advances in the last two weeks. This same feeling exists in a great many other lines, and as there has been a similar stiffening in the price of raw material, there is reason to believe prices will not only be maintained, but will probably be somewhat higher. The trade generally seem to take this view of the situation, and are showing considerable freedom in buying, while the variety of the mail orders received by us indicates stocks are low on a great many lines.

A cold snap would undoubtedly cause a brisk business, and as the excessive temperature this Fall has been most unusual the sudden change in the weather is likely to come any moment.

BIDDLE HARDWARE CO.

### THE BALTIMORE TRADE.

The suspense is past, and the result of the National election well known. So, with the greatest respect for Mr. Bryan, but as a compliment to Mr. McKinley, we might suggest making it unanimous. Our forward march as a nation must not be impeded. We have a destiny and a history, as well as a geographical position second to none, whilst our mineral and oil resources, fertility of soil and favorable climate, represent hidden wealth of untold billions. Being a thrifty as well as an extravagant race, and full of the spirit for making money, it is but natural that manufacturing should engage our attention to a very large extent; but really surprising is our advancement in this line when we consider that the State of Pennsylvania produces about one-fourth of the entire iron and steel product of the world. National protection for our industries is expected and sought, as a child its parent, in time of danger. Should over-protection in the way of import duties be administered, however, the ill effects are but too soon reflected upon the consumer in this country. What our manufacturers now want are the markets of the

world, and from present indications we will some day have our wishes realized. One large padlock manufacturer this month informed the writer that 40 per cent. of the goods he made were for export trade. This is a big showing, and should encourage others, particularly in the same line, as they make too great a variety of patterns for home consumption. Trade up to the day of Election was brisk; since then practically dead. But now we are receiving orders which suggest a revival of good times, though a continuance of the same, we feel, is dependent upon conservatism of manufacturers in advancing their prices. Collections are normal.

H. W. WEBB & SONS.

#### THE PITTSBURGH TRADE.

Business was good before Election day, but since that date it has had something of the nature of a boom. Starting with a stiffening of prices in pig iron, and near products, which had slumped to very low figures, prices have hardened appreciably within the past few days; mills that were shut down have started, and everybody seems ready to buy. In such goods as gas stoves, which the mild weather of October made light buying, we are now simply swamped with orders. The cold weather lately has also brought good orders for skates, sleds and horse blankets. This month a year ago we were in the midst of the boom, with prices of wire nails \$20 a ton higher than to-day, and many other items at top notch. Notwithstanding this fact, sales are running ahead of last year, which shows that a good many more goods are moving.

LOGAN-GREGG HARDWARE CO.

#### THE CLEVELAND TRADE.

The successful business man must push ahead or pull back constantly, as the bulls and bears are always active. Pulling back by the masters of the iron and steel industry seems now to be called for; contentment with reasonable profits will permit the use of a large amount of raw material, which we have in abundance, keep all wheels turning and all hands busy. We are, as never before, in condition to take things "at the flood" and conquer foreign fields. If we "Make hay while the sun shines," we can have an established foreign trade when things change. Opportunity now invites us, as the goods are wanted and customers are able to pay for them. Our immense supply of raw material and facilities for manufacturing suggest the importance of contentment, with fair profits, that this opportunity may be utilized. Our prosperity at home depends on foreign demands for our surplus. A boom in prices, caused by the greed of combinations, will be a crime against common sense, as it is sure to cause restricted trade and result in disaster. Recovery of confidence is very slow when the impression prevails that combinations have caused the trouble by insisting upon extreme prices, and that the law of supply and demand has been ignored. They can now remove much of the prejudice against them if they use the opportunities they have wisely. Never before has there been such responsibility in so few hands who have the power to control events.

THE LOCKWOOD-TAYLOR HARDWARE CO.

#### THE COLUMBUS TRADE.

The weather now is almost like Summer; 70 degrees weather the 17th of November is too warm. There is one consolation (if it may be considered a consolation), and that is the fact that it doesn't take much more than fifteen or twenty minutes for the weather to change from 70 above to the zero mark. It is necessary to have Winter and Summer clothing handy, so you can make changes two or three times a day, providing you want to be comfortable.

This is poor skate and sled weather. The few cold days a week ago spruced up the Horse Blanket, Robe and Stove trade. The demand for Ammunition has been very urgent and orders large. The shooting season is only twenty days in Ohio, but Bob Whites and Cotton Tails are having troubles of their own during the short season. We have heard of some hunters who have had trouble, also, in the form of

a \$15.00 fine for trespass. That makes quail high. It also makes the hunter "quail."

Prices seem to be on the up grade pretty generally now, and the important thing to know is just how far up the grade to 1899 prices they will get. Buyers seem as anxious to buy as sellers are to sell. It will be injurious to business if prices are boomed up as they were in 1899, and we hardly think manufacturers will be so foolish again, especially so soon after the collapse in high prices. These are trying times on a buyer. If he does not buy he may wish he had, and if he does buy he may wish he had not. Speculation is risky business any time, but most of us are inclined to be risky. If we get in on the right side we are happy, and if we get left we grin and bear it. A steady gait is pretty safe, and on a long journey is a sure winner.

THE SMITH BROS. HARDWARE CO.

#### THE CHICAGO TRADE.

Our business during the past thirty days has been extremely heavy, and orders from all quarters are still pouring in thick and fast. With the results of the recent election, we feel assured that the unsettled conditions, on all lines that have been disturbed, will adjust themselves quickly. This is clearly demonstrated by the recent advance on bolts in particular, and still higher prices in the near future will not surprise us. With confidence restored, orders are now being placed very freely, both for immediate and for future shipment. The market on Shovels and Spades appears stronger than ever, and with no outside competition to harass the Association we anticipate no change for some time to come. Axes are selling very fast, and, while no further advance on them has as yet been made, the probable scarcity later in the season may make it necessary to hold them at higher prices. There will no doubt be a shortage of many goods used in the early Spring, and those merchants who are not anticipating their wants will no doubt be disappointed in the way of shipments when they place their orders later. The indications are that we will have an exceptionally heavy trade the balance of this year, and that we will not run short of orders during 1901.

WELLS & NELLEGAR CO.

#### THE SAN FRANCISCO TRADE.

The seasonable rainfall that has been general throughout California since the next day succeeding the election is conceded to be of great benefit, and farmers, orchardists and miners are notably jubilant.

It is a matter of record that for weeks prior to the election there was no rain, and that these now jubilant people were a bit cast down in spirit on that account, and that California's senior senator, Hon. George C. Perkins, as steamboat transportation proprietor and an early-day Hardware merchant and miner, who was stumping the interior of the State for McKinley and Roosevelt, would never fail to announce, in closing his one or more addresses each day, that rain would surely come with the success of the Republican ticket. And so, pleasingly wondrous to relate, it came to pass on the day following the election of McKinley and Roosevelt.

In the way of Fall trade it is strictly pertinent to report for all dealers in this port most excellent progress. More personally speaking, Senior Brown, of Charles Brown & Sons, retailers, who buy mostly in carload lots from Eastern manufacturers and wholesalers, remarked a few days ago that this is a record-breaking business season with their house; in fact, that the very gratifying trade they enjoyed in 1899 is already excelled by their aggregate for the ten-and-a-half months of 1900, just passed.

And C. H. Philpott, managing proprietor of the builders' Hardware department of Philpott & Armstrong, in speaking of the late voluminous local newspaper talk relating to the millmen's strike for eight hours' substitute for nine hours as a day's work, said: "This strike annoyance, although not officially, is now virtually all off, and contractors and build-

ers are again moving right ahead with building that was temporarily stopped through trouble in getting lumber, and you can report trade in builders' Hardware, in so far as our experience is concerned, in a condition of activity that is entirely satisfactory, and an immediate prospective anything but discouraging."

The Manufacturers and Producers' Association and the San Francisco Labor Council are investigating the matter of the sale in California of stoves manufactured by convict labor in the Oregon penitentiary. Some 200 men have been employed at that work in the Salem prison for about twenty years. Whether or not should prison-made goods go upon the market with factory goods, and because of their cheapness bear the market and operate to throw men out of employment and reduce wages, is the question.

TRADES PRESS ASSOCIATION.

### Rules for Credit Limit.

One of the safeguards of our national banking system is the provision that no bank shall loan to any one individual or concern more than 10 per cent. of its own capital. This is a wise law and, to the credit of our banks, it is observed closely.

If business generally was conducted with a view to allowing proper credit, restricted by a kindred rule applicable to the circumstances, there would be less loss and consequent derangement. It should be an axiom that large lines of credit ought to be extended only by concerns of large capital. We hear sometimes of houses, particularly in certain lines, meeting with losses of dimensions from 50 to 100 per cent. of their capital. It is not always the fact that the cause is ignorance, but usually the temptation to chance a credit with a hope of gain.

Some credit men may doubt that this state of affairs does exist, but if inquiry is made it will be clear that there is more or less unwise crediting of this sort. Let us suggest that if a concern has a capital of twenty-five thousand dollars, not impaired, a credit of twenty-five hundred dollars be allowed, and if their surplus is believed genuine, grant 10 per cent. on that. Do not even consider that if your own capital is one hundred thousand dollars you can risk ten thousand in a particular case. Go the banks one better and make your rule apply on the credit asked and not on your own capacity. There is no desire to convey the impression that the banks have no consideration of the worth of the borrower. The fact is they watch this, and pretty closely, too.

Our sympathies naturally go out to the small concerns. Capital is small, the competition of the new combinations (we have no trusts) is severe, and it takes a long time for the enterprise to find the position that its principals desire for it. It is all the more necessary that the foundation should be well laid. Supposing a concern with ten thousand dollars' capital should find a profitable customer with a capital rating of one hundred thousand dollars, and purchasing five thousand dollars monthly, on ninety days' time. Should the small house undertake to extend the credit? No, not by any means. It is better to attempt to do small things first.

Some credit men cannot appreciate how it would feel to have to follow strictly a 10 per cent. limit, as their own experience has been in lines where the 10 per cent. has scarcely ever been expected, sales being large in number, well distributed and not in large amounts. Their hearts go out, however, to houses who are known to have almost their whole capital tied up in single accounts gone wrong.

There are houses having not over ten customers on their books and still the credit men of such institutions have their troubles. Many deal with trade that buy in small amounts and are here to-day and there to-morrow. Some large concerns are reported in almost all of the failures in their line. To all of these and any others let us suggest the application of a 10 per cent. plan where practical and in the appropriate manner.

THOS. P. ROBBINS.

### Silverware Possessing Quality.

Whatever style may offer in the way of fancy handles, wood, pearl, or composition, the solid, silver-plated knives and forks will always continue to be the standard among those of good taste and moderate means. By the improved process of manufacture the best plated ware may be procured at prices but slightly higher than were a few years ago paid for the most commonplace articles.

To be in harmony with good taste, however, knives and forks, if plated, should be of the very best material, workmanship and finish, with a silver plating of sufficient weight to be durable. The best plating is that which deposits 12 pennyweights per dozen, and when this is guaranteed articles may be purchased in full confidence that they are the very best that can be procured. Dealers should exercise careful discretion in purchasing silver-plated goods to handle only such as have back of them the name of a responsible maker, thus assuring not only that the goods are all that is claimed, but that any discrepancies, should such be possible, will be immediately corrected and the cause remedied.

In the line of silverware now placed upon the market by the Goodell Company, Antrim, N. H., nothing will be found wanting which contributes to quality or finish. Being made of carefully selected stock, finished in the best possible manner and carefully hand finished, the goods are handsome, attractive, and of the very best plate, being guaranteed 12 pwt. to the dozen. Were it possible to improve upon this quality the Goodell company would be first to adopt such improvements. To match the knives, forks may be had of various up-to-date patterns, all of the very best grade and finish, 8 pwt. per dozen, guaranteed.

Dealers handling this line may be assured that they are offering their customers goods equal to the very best that can be had at any price, while the cost is such as to make a profitable and popular line for a leader.

### Making Carbons for Electric Lights.

One of the new industries that have followed in the train of the electric light is that of carbon making. The first electric arc lamps used carbon points sawed out of the dense, almost metallic looking, carbon deposit that slowly formed on the inside of the clay retorts used in making coal gas. This material was scarce and soon became expensive, and being both exceedingly hard and more brittle than glass, was very difficult to work. It was, therefore, found necessary to manufacture the carbon-points, and making these has now become a considerable industry. New York City alone consumes several hundred thousand of them every week. They are made of a mixture of petroleum coke and tar which is baked for a long time at a high temperature. The coke is ground as fine as possible in especially designed mills, and is intimately mixed with the tar in mixing machines. A cake of the resulting carbon dough is placed in a strong steel cylinder having a hole of the proper diameter at the bottom. A massive steel plunger worked by hydraulic power descends upon the mass and forces out the dough in the shape of a rod. This is cut into proper lengths, packed tightly in powdered coke in iron boxes, and baked at a red heat for a week or more. The product when cooled and smoothed on emery wheels is the carbon rod of the arc lamp.—*Exchange*.

Clerk (to employer)—What shall I mark that new lot of black silk?

Employer—Mark the selling price at \$3 a yard.

Clerk—But it only cost \$1 a yard.

Employer—I don't care what it cost. I am selling it regardless of cost.—*Ohio State Journal*.

"What seems to be the matter with him?" asked the doctor, approaching the bedside of the man who lay swathed in bandages.

"He found the gas leak," explained the nurse.—*Ex*.

### The Atkins Exhibit at the Paris Exposition.

The great Paris exposition accorded manufacturers of machinery an excellent opportunity of showing their machinery in operation before the eyes of European manufacturers generally. While illustrated catalogues and descriptive circulars have their field of importance, nothing can take the place of practical demonstration. In fact, the surprise has been that so many American tools have found purchasers on that side of the Atlantic with so little opportunity to demonstrate their special features and superiority as has been permitted at the present exposition. While the magnificent display of machinery of all kinds for both metal and wood-working which one saw in the Champs de Mars is idle so far as demonstration is concerned, yet the opportunity to study the tools is excellent. Much enterprise was exhibited by the great saw manufacturing concern, E. C. Atkins & Co. This well known Indianapolis saw manufacturing concern had two exhibits in the Champs de Mars building, one in group IV, department of machinery, which included all kinds of saws operated by machinery; the other was group XI,

each side being covered with chosen examples displayed in series. On the right hand side the design had been in circular saws with plain and inserted teeth, and a certain number of corn and cane knives were used to vary the design. In the flat case below this exhibit were samples of the various saw tools and mill fittings made by the company. There were various samples of circular saw mandrels, circular saw guides and rounders, saw gummers, as well as the various kinds of hammers and swages used by saw mill men. All these were kept in bright condition, forming a very attractive whole. On the left side the exhibiting board was employed in displaying butchers' tools. There the various butchers' saws were found, with oval or flat backs, with fixed or detachable blades. Beef splitting saws were also shown, with, at the bottom, a few samples of mitre box saws and back saws. A gayly painted wood saw occupied the centre. The flat case below contained articles of the same kind, which could be examined by the visitor. This exhibit was continued inside of the hollow parallelogram and space corresponding to two cases occupied on each side. In the right

THE ATKINS HARDWARE DISPLAY AT THE PARIS EXPOSITION

which contained their Hardware exhibit of hand saws, cross-cut saws, wood saws, etc. For each of these exhibits the Atkins company received a gold medal.

It is doubtless gratifying to the company that the superior qualities of its saws, which has been so well established in the United States for many years, is thus recognized by the highest prizes awarded in the great world's exposition of 1900. This latest success, following the victory of the Atkins saws in the recent international sawing contest in Australia, will do much to extend the reputation of the brand in the markets of the world.

We present herewith an illustration of the Atkins Hardware display, which was placed in a gallery directly above the mines and metallurgy exhibit on the main floor of the Palace de Mines. It was the first exhibit that caught the eye when one entered the gallery in the space devoted to minor metallurgy from the upper end of the space. It had therefore an especially desirable location and it was very tastefully arranged on each side of the entrance. The brightly polished articles manufactured by the company were displayed on dark purple velvet, the exhibiting boards on

hand case all kinds of cross-cut saws were displayed, showing a variety of teeth, such as the American tooth, the lance tooth, the diamond tooth, etc. In the case below another set of saw tools was exhibited, as well as hand saws with special metallic handles; a few grooves were also shown. The left hand case was devoted to hand saws of various kinds, with compass and keyhole saws, the cases below containing specimens of the same articles for examination. This exhibit made a fine impression on the visitor coming into the space. It will be easily understood that this class of goods lends itself well to the exigencies of the case; everything is bright, shining and with the display of modified light coming from the roof in streams the effect could not fail to be pleasing.

The exhibits of E. C. Atkins & Co. have from the beginning been in charge of Edwin S. Taylor. While Mr. Taylor is American born and received both an ordinary and technical education in his native land, he has from long residence in Europe become thoroughly familiar with European methods and with the languages most spoken by those who visit the exposition. He is a thorough gentleman, an accomplished business man and withal a royal good fellow.

### Down a Missouri Zinc Mine.

There are regularly defined steps in lead and zinc mining which every prospector must follow, says the *Indianapolis Press*, although the steps are accompanied by enough variety along the way to give spice to the process. The first thing is to select the ground. The prospector may rely on his own judgment in making the selection, or he may take the advice of a friend, who as likely as not is getting a fee from the owner of the ground for the entirely disinterested advice which he gives. The prospector may consult a clairvoyant, or a gypsy, or even a pack of cards, regarding his choice, for many miners are superstitious; or he may throw a stone and sink his drill-hole where the stone falls, or he may close both eyes and just begin digging. It is difficult to say which is the best procedure, for one is shown instances in which each has been successful—the failures being less frequently mentioned.

A steam drill is used, and the drill hole is about ten inches wide at the top, decreasing on the way down until it is often only three or four inches wide at the bottom of the drill hole. Each bucket of dirt is anxiously watched for signs of ore. Ore is found from the surface itself to several hundred feet below, but the drills are seldom sunk deeper than 200 feet unless there have been some unusually rich finds at great depths in the immediate vicinity. The ores are supposed to follow the courses of ancient subterranean waterways, and there are certain kinds of rock formation which are pretty certain indications of the presence of ore not far beneath. Notwithstanding the immense capital which is interested in lead and zinc industries in various parts of the world, there seems to be little definite knowledge even among the scientists regarding the ore deposits. It has always been claimed that coal and zinc could not exist in close proximity, as the geological conditions which contributed to the formation of the one were opposed to the formation of the other. And yet, not three miles from Joplin, there is being taken out of a drill hole anthracite coal and zinc in layers, or imbedded the one in the other. And in a neighboring county are regularly worked mines where the zinc is found imbedded in the coal, and where there are strong indications of the presence of natural gas, another supposedly impossible combination. The usual surrounding material is a soft limestone, easily crushed, and present sometimes as layers between the pure lead or zinc, sometimes as a covering to the pockets containing the ores, and again with the ores imbedded in it. A specimen of pure ore weighing a hundred pounds was found at a depth of 120 feet the other day, and specimens have been found weighing from 400 to 600 pounds, although it is almost impossible to raise such large specimens to the top of the mine without breaking them.

The lead is usually present in cubes or oblongs, varying in size from one-sixteenth of an inch to several inches, but where found in pockets it is in irregularly-shaped masses, though nearly always possessing the sharp edges. The zinc ore comes in tiny specks scattered through the rock, making its presence known by its ruby-like sparkle. The rock containing the zinc is often so soft that it can be crushed to powder with the hand, and the lead is easily separated from the rock to which it clings, retaining its shape and sharp, clearly-defined edges. Lead is often found on or near the surface; zinc almost never in such a position. Owing to this peculiarity, the producers keep the lead under lock and key, but the zinc bins are left outside the mills, and often full of ore for days at a time. No questions are asked when lead is offered for sale, the purchaser knowing that it may have been dug up almost anywhere with a pick and shovel, and that it would be an impossible task to trace its origin. Lead is bought in lots of one-pound weight and upward, zinc seldom in smaller quantities than a ton. When the small boy of the district wishes to go to the circus, or to buy some candy, he goes out to his father's land, or some other man's land or bin

—it does not much matter which—and hunts around for a nugget of lead.

Usually several prospect holes are drilled before a shaft is sunk and the mill erected. The shaft is put between the best drill holes, very seldom directly on a drill hole. The mining is begun pretty deep—that is, “drifts” are started following the ore or “leads,” as they are called. The drifts are usually followed on an upward incline, and after the ore “pinches out” the miner proceeds to “take up stope”—that is, dig up the floor of the incline.

Dynamite is used in mining lead and zinc, and water is used to separate the ore from the crushed rock with which it is mixed. The pond, which is a necessary feature of every mine, is usually kept supplied with water by the pumps belonging to the mine, which raise the subterranean water that would otherwise flood out the mine. Where the producer is so fortunate as to have a dry mine, he buys the water for his pond from a less lucky neighbor or from the City Water Supply Company. In most mines there is water oozing from every crevice. It is necessary to wear rubber coats when visiting them, and if the pumps should get out of order the miners might be drowned before they could reach the shaft and signal for a bucket. The mills seem as active on Sunday as on other days, but in most cases they are not actually running, the smoking chimneys being all for the benefit of the pumps, which must run night and day in order to keep the water down. If they stopped over Sunday the men could not work on Monday.

Where the ground is unusually rich, or the producer's money is so limited that he cannot afford to erect a mill and have machines run by steam, the horse-hoister is often used to raise the ore during the first few months of a mine's existence.

Many tricks are practiced on the “tenderfoot” who attempts to invest in the district. Sometimes the ground is “salted”—that is, nuggets which have come from some other place are put on the surface or in a mine, the purchaser getting only a hole in the ground, where he thinks he is getting a rich mine. Men who ask apparently aimless questions of a mine-owner regarding his own or his neighbor's property, often turn out to be agents who have gained valuable information which is used to the detriment of the unguarded talker.

The interior of a mine presents an interesting sight. It is not at all like the interior of a coal mine. In the first place, the descent is not made in a cage resembling a freight elevator, as in a coal mine, but in a steel tube resembling in shape the witches' cauldron in “Macbeth,” or in a circular steel half barrel, tipped over on its side. The sensation of being put into the tube as it rests on terra firma, and of then being slowly lifted and swung over the dark, square well into which you had timidly peeped a few minutes before, is novel, to say the least. You are likely to have still more novel experiences, if you are a woman visitor, and your first descent

THREE-BAR LEATHER  
shoe-soles and top-lifts (for heels) are the best.

Write us; we'll give you points.

Baxter Schenkelberger & Co,

350 Congress street, Boston.

is made into a mine which is not running, so that you are 140 feet below the surface, and alone, save for the presence of a mischievous cousin, who leads you up a mountain of loose stones and gravel until your head touches the roof of the mine, and who, when you decline descending the other side, with the prospect of having to ascend again in order to return to the shaft, takes the only lantern and leaves you on the crest of the mountain (liable to slide either way) while he makes some investigations further on. It is so pleasant to have him get to the bottom of the slide and go around a turn and unexpectedly blow out the light, so soothing to have your attention called to the sounds of work in the neighboring mine as the tapping of spirits, and so encouraging to be told that he has not another match, and that you will have to get back to the shaft in the dark. Fortunately one can only die once, so it is just as well to make up one's mind early in life not to be in dread of it all the time, and it is interesting, if somewhat weird, to be all alone so far below the surface of the earth.

Sound carries much further below than above ground, and you distinctly hear the pick of the miners, as well as the dynamite blasting from the mines several hundred feet away. After a match has been found and the lantern is lighted, you slowly return to the shaft, stopping on the way to peep into natural caves of various dimensions, and to examine the walls of the mine. A vast cave stretches above you glistening with zinc, tiff, crystal and occasional shines of mundic. Water oozes from every crevice, here and there a dim light penetrates through a drill hole in the roof. Nobody has as yet told you that the greatest danger in a lead and zinc mine is of the boulders becoming dislodged and falling from the roof on some one's head, or that a very small stone will often kill a man when it falls from a great height.

One of the dangers to which a miner or groundman, as he is called in mining parlance, is exposed, is that of explosions of dynamite before such explosions are expected. A blast can be heard for a great distance, and vibration often dislodges boulders from the roofs of neighboring mines. It is necessary to use the powder almost constantly for blasting and familiarity brings carelessness in handling it. A man who descended alone into a mine had just signaled for the loaded bucket to be hoisted when the presence of impure air was made known by his light going out. He barely managed to signal for the quick descent of an empty bucket and climb into it and cling on until he reached the surface, when he lost consciousness.

Two men went into a mine which was not running. The friend waiting in the carriage above grew uneasy after the lapse of a couple of hours, and went into the mill. Then the engineer recollected that the men had not returned, and descended to find that they had gone along a narrow pathway with holes five or six feet deep, filled with water on either side, and that, encountering bad air, which had put out their lights and nearly overcome them, they lost their way. Not daring to proceed boldly for fear of dropping into one of these holes, and confused as to direction, as people always are in a mine when all is dark, they had crawled on their faces for two hours, growing weaker each moment from the bad air. One of the men had begun to whistle and sing to keep up their courage, and the other man said that he sang the cheeriest when the hope of rescue seemed faintest.

The men in charge of the hoister should have strong hands and steady nerves. A careless, inexperienced hoistman let a bucket drop forty feet in the descent one day. But for the fact that the man in the bucket had once been a sailor, and that he realized the danger in time to hand-over-hand up the rope, he would have been killed. When the bucket crashed and broke in pieces on the bottom of the shaft, the man was clinging to the rope, forty feet above. He signalled to be hoisted, and when he reached the surface he was not overly polite in his prompt dismissal of the hoistman.

### Queer English Names.

The English tongue is certainly among the least phonetic of languages. This observation particularly applies to many prominent British family names, some of which are so interesting that we purpose giving a few examples.

In the first letter of the alphabet, for instance, we have such instances as Abergavenny, which should be pronounced Abergenny; Alcester, which should be Awlster; Allhusen, which should be Aal-hewsen; Anstruther, which should be Anster, and Auchinleck, which should be Affleck.

If you want to be correct you should call the hero of Mafeking Baden-Po'ell, though seventy people out of every hundred certainly do not do so.

If we were to be consistent and spell names as they ought to be pronounced, we should have to make the following drastic changes in some prominent Bs: Beauclerc would become Bo'clare; Bellingham, Bellinjam; Belvoir, Beaver; Berkeley, Barkly; Bethune, Beeton; Breadalbane, Bredawl-bane; Beauchamp, Beecham; Brougham, Broom, and so forth.

There are plenty of no less curious examples in Cs. For instance: Caillard should be pronounced Ky'ar; Cadogan, Cadug'an; Chalmers, Chah-mers; Crespigny, Creppiny; Chandos, Shandus; Charteris, Charters; Cheyne, Chay'ney; Chisholm, Chizzom; Cholmondeley, Chumley; Claverhouse, Clayverse; Clowes, Clooz; Cochrane, Cock'ran; Colquhoun, Cohoon; Compton, Cumpton; Couch, Cooch; Coventry, Cuvv-entry, and Crichton, Cryton.

De Bathe should be De Bahth; de Zoete, de Zoot; Cromwell, Crumwell; Elcho, Elko; Falconer, Faw-kaner; Farquharson, Farkerson; Fenwick, Fennick; Fildes, Fyld; Froude, Frood; Geoghegan, Geegan; Idesleigh, Idds'ly; Iveagh, I'vah; Jeune, June; Knollys, Noes, and Leveson-Gower, Looson-Gore.

Among the Ms we have such instances as MacIver, which should be pronounced Maceever; McKay, McKy'; MacMahon, Macmahn; Mainwaring, Mannering; Marjoribanks, Marchbanks; Marlborough, Mawloro; Menpes, Mempes; Menzies, Ming'ies; Meynell, Mennel; Molyneux, Mullineux, and Monckton, Munkton.

"Poly of the Guards" should be called Lieut. Gen. Pool Car'ey, and the author of "The Second Mrs. Tanqueray," Mr. Pin-air'-o; while the organ grinder would like to be called Earl Poulet by everybody.

Examples are comparatively rare among the latter letters of the alphabet.—*London Express*.

Student—The hairs of our heads even are all numbered.

Baldhead—Well, then, I'd like to secure a few back numbers.—*Ex.*

### The Credit Man's Acumen.

"A credit man has many strange experiences," said a gentleman who formerly occupied that position with a large jobbing house. "Chance will play into his hands in all sorts of curious ways, and often he will feel as if Providence had directly interposed to save him from some swindler. I remember a remarkable incident that occurred the first year I was in business. We had a customer in a good-sized interior town who had been trading with us for a long time and enjoyed the entire confidence of the house. One day in May he paid us a visit and placed a very large order, going, in fact, to the extreme limit of his credit. He explained its unusual size by saying that he was about to enlarge his establishment, that he had allowed his stock to run down preparatory to making a big splurge to wipe out a rival establishment, and, in short, told such a plausible story that I at once approved the account. That afternoon a young man came from a furnishing store, dropped in, and asked whether Capt. —, mentioning the merchant's name, had left the city. 'I am sorry,' he remarked, when he learned that he had gone, 'the captain placed an order with us for a couple of suits of extra heavy underwear and was anxious to have them delivered next week. I wanted to tell him that we'd have to send North for the goods,' he added, 'and they may be delayed.' That incident set me to thinking. There might be a thousand perfectly natural and innocent explanations of the order, yet it certainly carried the inference that our friend was contemplating an early trip to a cooler climate, and—well, I had a strong premonition or whatever you choose to call it, that something wrong lurked in the background. The more I thought about it the more uneasy I became. It seemed absurd to turn down an old friend and lose a handsome sale simply because he had ordered some heavy underwear, and I knew I was risking

severe censure, if not my situation itself, but before night I countermanded his purchases and notified him by wire that we had decided to trim our credit lines for the summer and were sorry that we could not oblige him. He sent back a furious letter and placed his order with an opposition firm, who accepted him gladly. My bosses looked pretty black when they heard the story, but they changed their expression early in June, when our worthy captain suddenly disappeared, after turning everything he had into cash. Just as I had anticipated, he headed for a cooler climate. When last heard from he was rusticating in Manitoba."—*New Orleans Times-Democrat*.

"But I don't know you, madam," the bank cashier said to the woman who had presented a check.

But this woman, instead of saying haughtily, "I do not wish your acquaintance, sir!" merely replied, with an engaging smile:

"Oh, yes, you do, I think. I'm the 'red-headed old virago' next door to you, whose 'scoundrelly little boys' are always reaching through the fence and picking your flowers. When you started downtown this morning your wife said, 'Now, Henry, if you want a dinner fit to eat this evening, you'll have to leave me a little money. I can't run this house on the city water and 10 cents a day—'"

"Here's your money, Madam," said the cashier, pushing it toward her and coughing loudly.—*Chicago Tribune*.

### Side Line Offered.

## The Value of Courtesy in the Credit Office.

There is nothing, perhaps, which so appeals to the good-will of the out-of-town customer, when he comes into the house to look around, as courteous treatment on the part of those who look after the affairs of the credit office. The average credit man is very particular in matters of this kind, and almost invariably has a pleasant word of greeting and a hearty handshake for the rural customer. There are, however, unfortunate exceptions to this rule; "unfortunate" for the reason that politeness and a courteous manner are component parts of a successful credit man, and he who does not possess them is doubly unfortunate when he comes to deal with the country customer, who, perhaps, by reason of his standing in his community, may have an exaggerated opinion of his own importance. Such a man will necessarily have to be handled with some care in order to *not* actually offend him when he comes in for a little visit or to get acquainted. It is not necessary to take him out for a round of drinks or to see the town—his entertainment should be left to the sales department—but he should be made welcome, and to feel at home in the credit office, and to understand that he is with friends who are interested in his welfare, and glad of the opportunity of learning, at first hands, the condition of his business and the outlook for trade in his community. With courteous treatment and a little tact the credit man will be enabled not only to secure the good-will of such a customer, but may, perhaps, obtain from him a thorough understanding of the general condition of his business, and possibly the promise of a late property statement, to be sent upon his return home.

This is a subject for no little thought and consideration. A credit man should either decline to meet the out-of-town customer or else he should be prepared to take the necessary time, no matter how busy he may be, to properly greet and show him *reasonable* attention under every circumstance and at all times. This statement cannot be too strongly emphasized. The effect of many months, yes, perhaps years, of careful nursing and courteous treatment of the customer by the salesman, may be completely obliterated by carelessness or indifference on the part of the credit man when greeting the country buyer.

The credit man's duty, however, does not end with the greeting; he should see that the customer is properly presented to the management in the sales department (if this formality has not already been attended to), and it is far better to accompany the buyer, if possible, rather than intrust the mission to some one else. Little courtesies of this kind are always appreciated, and are remembered for a long while. It is such a spirit, dispersed throughout a business, that popularizes it in the minds of the public, acts as a lodestone for drawing trade, and, if the other principles be as well founded, establishes its success. It is well to remember that

the unpopularly conducted business succeeds only under *un-usual* conditions. Therefore, it is necessary that the credit man should exert his full energy towards maintaining a courteous bearing in the office entrusted to his care, and in this way contribute his best efforts towards securing the popular favor, without which it is well-nigh impossible for a business to succeed, in this day of keen competition and progressive methods.

A. C. FOSTER.

## Character as an Asset in Commanding Credit.

In a very able article written recently for the *Saturday Evening Post* by one of our esteemed fellow credit men, there is no mention of the merchant who has nothing but a good record to act as a guarantee for the payment of his accounts. By this is meant one who can claim exemptions should he so desire and leave nothing for his creditors.

This class is very numerous, and it sometimes happens that one of them will sell out, dispose of his property to defraud his creditors, or simply refuse to pay his indebtedness. Naturally this is done because this short-sighted man may perceive through this course a means of making a few hundred dollars at the expense of his creditors. The question is, who is the loser? Undoubtedly this misguided dealer who has sacrificed all further claim to the trust and confidence of those who have been extending him credit.

The man who can command credit and has only his reputation to back him, did not gain the confidence of his creditors in a day or a year, and, therefore, should guard his standing with infinite care. It is a very valuable advantage, and once lost is almost impossible to recover. The average credit man is not so solicitous about a customer's wealth in property as he is of his wealth in morals. Many men who were once wealthy cannot command a dollar of credit now, because they were not honorable in their dealings.

It is to be regretted that the Bankruptcy Law does not command the same respect from the dealer whose intentions are dishonest as the United States laws do from those whose intentions are dishonest in other directions. Of course, this is attributable to the fact that the Government pays the expense and generally gets satisfaction out of her "debtor." But let us hope by educational means, and closer affiliation with the trade, which the vast improvement in mail service makes more and more possible, we will in time convince the doubtful customer that "honesty is the best policy," after all.

ANTHONY GEVERS.

"Oh, we had the loveliest arrangement at our church society last week! Every woman contributed to the missionary cause \$5, which she earned herself by hard work."

"How did you get yours?"

"From my husband."

"I shouldn't call that earning it yourself by hard work."

"You don't know my husband!"—*Ex.*

## HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

### New Hardware Stores.

Aylmer, Quebec, Canada.—S. P. Wright.

Brookville, Miss.—The Brookville Hardware & Furniture Co. has been incorporated.

Charleston, W. Va.—The Charleston Hardware Co. has been chartered. This concern is to conduct a mercantile business and deal in Hardware and all other articles and things to carry on the business profitably and properly. The capital is \$100,000.

La Porte, Tex.—Louis Beck, Nugent Building.

Mingo, O.—Scott & Armstrong.

Mobile, Ala.—Papers of incorporation have been filed in the Probate Court for the Stykes Hardware Co. The company has a capital of \$5000 and the incorporators are John A. Stikes, A. A. Stikes and Charles Spies.

Sarnia, Ontario, Canada.—Mackenzie, Miln & Co., Limited, has been incorporated with a capital of \$100,000, to deal in Hardware and carry on business as electric, gas and steamfitters.

Toledo, O.—A new Hardware store is to be opened on the East Side in the store room recently vacated by the Starr Avenue Hardware Co., which has moved across the street. The new firm is to be known as Philip Jacob & Co., the second member being Frank Sailer.

Webster Grove, Mo.—Z. T. Condit.

### Changes and Improvements.

Auburn, Neb.—W. W. Scammon, of York, has bought H. E. Seller's Hardware business.

Batavia, N. Y.—V. C. Shadbolt has built a 16-foot addition to the rear of his Hardware store and machine shop at Ellicott Square.

Beverly, Mass.—W. W. Marshall is to close out his Hardware business.

Black River Falls, Wis.—A. J. Vroman has sold his stock of Hardware to A. F. Werner.

Bowling Green, Ky.—A change in the Hardware house of Miller & Spalding has taken place, in which the interest of the late Jesse G. Spalding was transferred to W. Scott Claypool, who becomes an active member of the firm.

Caldwell, O.—P. J. Kane will succeed John Kane in the Hardware business at this place.

Durant, Ind. Ter.—Tom Hale, of the Hardware firm of Hale & Malone, has withdrawn from the firm. S. T. Bentley, who for several years has conducted a large implement house at Durant, has purchased an interest in the above-named Hardware business, and the new firm is known as Malone & Bentley.

Eastport, Me.—E. M. Cherry has pur-

chased the Hardware store of H. D. Cummings, Mr. Cummings retiring from active business.

Fayetteville, Tenn.—James W. Feeney and John M. Wright have purchased the West McKenzie Hardware store, where they will carry a full line of Hardware, machinery and vehicles.

Greenwood, B. C.—A joint stock company, to be called the Russell-Law-Caulfield Co., Limited, is proposed, with the object of acquiring and consolidating the business of the three existing Greenwood firms, viz., the Russell Hardware Co., W. M. Law & Co., general merchants, and Caulfield & Lamont, Hardware merchants. It is proposed to make the capital of the new company \$100,000.

Guilford, Mo.—A. L. Whiteford has sold his interest in the Hardware business to J. W. Core, and will move to Savannah, Mo., to engage in the same line of business.

Hackensack, N. J.—Mrs. Ellanger has given up her Hardware store.

Hartland, Me.—Clyde Smith has bought of Archie Linn the Hardware store on Main Street. It will be remembered that Mr. Smith sold out some two years ago to Mr. Linn.

Hutchinson, Kan.—Waite & Babbitt have purchased the Brown Hardware store.

Jacksonville, Fla.—The firm name of John S. Bond & Co., dealers in Hardware, has been changed to Bond & Bours, as J. B. Bours, who has been a member of the old firm since it began business two years ago, has disposed of his grain and feed business, and will devote his whole time to the Hardware business. The new firm will remain at the old stand, and will conduct two stores, the new one being the store lately occupied by Mr. Bours and adjoining the present store of Bond & Bours.

Maysville, Ky.—J. D. Davidson is adding a new Hardware room to his already large store.

Milwaukee, Wis.—The Pritzlaff Hardware Co. intend to replace one of their large warehouses with a new one next year. The cost will probably be about \$10,000.

Phelps, N. Y.—Myron D. Crosier, of Gorham, and J. Garrett Dixon, of Halls, have purchased the Hardware store of J. M. Price.

Pine Bluff, Ark.—Material is being placed on the ground for Fox Bros.' new warehouse, to be built on State Street, at the rear of their present warehouse on Main Street. When this building, which will be two stories in height, is completed, this popular Hardware firm will occupy three houses and seven floors.

Plainfield, Vt.—Henry Keniston is invoicing goods in the store of Bell & Townsend, and proposes to put in a stock of Hardware.

Reading, Pa.—Goodrich & Keefer, Hardware merchants at 831 Penn Street,

have closed out their retail department and removed to the new building at 226 and 228 North Eighth Street, where the firm will engage in the wholesale trade exclusively.

Rockford, Ill.—The firm of Forbes & Reynolds has dissolved partnership. Mr. Reynolds will continue the Hardware business and Mr. Forbes will remain with the new firm for the present.

Rock Island, Ill.—Hunt & Waterman have purchased the Hardware business of H. L. Wheelock.

Scotland, S. D.—The Hardware and implement firm of Engel & Serr has been dissolved by mutual consent. Mr. Serr will continue the business.

Stanhope, Ia.—J. Jacobson & Son announce that they will close out their Hardware stock and retire from business.

### Business Embarrassments.

Harrisburg, Ark.—A. W. Sparks has made an assignment of his grocery and Hardware business for the benefit of his creditors. T. B. Sparks was named as assignee.

Montreal, Canada.—Joseph R. Leblanc, Hardware merchant, has assigned at the demand of Caverhill, Learmont & Co., with liabilities of about \$2500.

Ypsilanti, Mich.—Charles E. Forsyth, a Hardware merchant, has filed a petition in bankruptcy, giving his liabilities as \$1770, with no assets.

### Fires in Hardware Stores.

Algonac, Mich.—H. B. Guinness. Loss, \$9000; insurance, \$3500.

Clarksburg, W. Va.—Williams & Davisson. Loss, \$15,000.

Coperas Cove, Tex.—W. M. Wallace.

East Palestine, O.—Smith & Crawford.

Kingsville, Mo.—A. T. Goddard.

Manor, N. W. T.—Alex Stinson. Loss, \$1400; insurance, \$900.

Mobile, Ala.—W. Wing & Sons, 219 Dauphin Street. Small loss.

Pottstown, Pa.—J. Fegeley & Son. Loss, \$2500; partially insured.

Shelby, Neb.—E. E. Knerr. Loss, \$2800; insurance, \$1200.

St. Louis, Mo.—Fred Mueller. 1733 South Ninth Street. Loss, \$400.

Truro, Ia.—Litton, Gaston & Co.

### Burglaries in Hardware Stores.

Anna, O.—P. W. Young; ammunition.

Binghamton, N. Y.—Jones & Young; cutlery and revolvers.

Clinton, Mich.—A. B. Vandemark & Co.; knives, etc.

Colorado Springs, Colo.—Rudolph Heyse; knives and razors.

Martin, Tenn.—Phelan Bros.; guns.

McKees Rocks, Pa.—Frank Kossler; \$100.

North Adams, Mass.—Burlingame & Darby; cutlery and revolvers.

Stillwater, Minn.—Stillwater Hardware Co.; cutlery, etc.

### Give You Your Money's Worth.

Coldwell Lawn Mower Co., Newburgh, N. Y. [*Lawn Mowers*]: We think HARDWARE is enterprising, pushing, up-to-date, so to speak, and has a certain amount of get-up-and-get spirit about it, combined with a certain flavor of "I give you your money's worth when you advertise with us," that we like it—not for fun or sentiment, but for real business, and so long as you continue thusly you can count on our continuance.

**FEDERAL BENCH SHEAR.**

## HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

### New Companies, Etc.

Big Rapids, Mich.—The plant of the Michigan Heater Co. is nearly completed. The company starts in with a capital stock of \$50,000, and will manufacture not only stoves, but also fittings for stoves and furnace work.

Clyde, O.—The Clyde Cutlery Co. has been incorporated with a capital stock of \$25,000.

Newark, O.—Machinery is arriving for the new Newark Meat Tendering Co., which will in a few days begin to manufacture Snelling's meat hackers.

New York, N. Y.—The Euwer Sash, Lock & Door Bolt Co. has been incorporated. Capital, \$10,000. Directors: J. N. Euwer, of Newcastle, Pa., and W. C. Brundage and C. C. Dickinson, of New York City.

Ottumwa, Ia.—Roy Johnston and Frank Sharp have leased the old cutlery building and will begin the manufacture of important novelties. The building has been vacant for a long time, but the owners will at once begin to repair it.

Pittsburgh, Pa.—The Iron City Sanitary Mfg. Co. has been formed by a party of Pittsburgh business men and is capitalized at \$100,000. The company will manufacture a special line of bath tubs, plumbers' supplies and enameled ware. A large plant at Zelienople has been purchased, and will be put in operation about December 1. The company has applied for a charter. The directors are Joseph A. Frauenheim, Edward Watson, George Blackham, Martin Harrison and Q. A. Hensel.

Rome, N. Y.—Papers of incorporation of the Forsberg Spring and Gear Co. have been filed. The present capital stock is \$5,000, with the privilege of increasing to \$25,000, with outside capital. The company is the continuation of the Forsberg Spring and Axle Co., organized November 1, 1899. The new company will manufacture finished work in all lines of its business, including the manufacture of pneumatic gears, which will be made at their plant, 109-111 West Street. The president of the new company is H. K. Pell, and the secretary and treasurer, A. L. F. Pell.

Weir Village, Mass.—Hiram Bliss, of Highland Street, has left for Baltimore, where he will establish a factory for the manufacture of nails and tacks under a process patented by himself whereby the nails and tacks are galvanized or coppered.

### Changes and Improvements.

Batavia, N. Y.—The Johnston Harvester Works have recently been enlarged, and now give employment to 300 men.

Braddock, Pa.—A change has been made in the management of the Braddock Tool Co.'s plant, at Braddock Avenue and First

Street. J. J. Brown, formerly of the Standard Chain Works, at Rankin, was made general superintendent, succeeding O. K. Muehlberg, who resigned.

Cleveland, O.—The Co-operative Stove Co., Central Avenue, are to erect a brick factory at a cost of \$15,000.

Cleveland, Ohio.—The Cleveland Stove Works have purchased the remainder of the block on which their plant now stands and will double their capacity at an early date. Work has already commenced and the new additions will be completed by the first of the year.

Dowagiac, Mich.—The three-story brick addition to the Round Oak Stove Works is fast nearing completion.

Hollidaysburg, Pa.—A commodious nail house has been erected by the Hollidaysburg Iron and Nail Co., along the railroad in the rear of the nail factory.

Kokomo, Ind.—The Kokomo Globe Range and Stove Co. have let the contract for a large, three-story brick building, 56x126 feet, to be used as a packing and storage department. When completed it will give to the plant a floor capacity of 28,200 feet.

Marietta, O.—The Leidecker Tool Co. have their new three-story building under roof.

Milwaukee, Wis.—Joseph Bach, who is a principal owner of the Western Hardware and Mfg. Co., on Deer and Dover Streets, intends to erect around the Hardware plant about 200 houses for the employes of the plant and their families.

Niagara Falls, N. Y.—The Niagara Falls Metal Works Co., of Niagara Falls, Ont., and the McKinnon Dash and Hardware Co., of St. Catharines, Ont., have been consolidated under the name of the McKinnon Dash and Metal Works Co. The company is incorporated and during the Winter will operate both factories. Next Spring, however, a new plant will be purchased or built and the concern will abandon the old plants. It has not yet been decided where the new one will be located.

Oakland, Me.—The American Axe & Tool Co. has recently sold their Upper Mills property to Frank Chase, of Waterville. The sale included the large axe and scythe shop on the easterly end of the upper dam.

Ottawa, Ont.—The Ottawa Saw Works are rapidly equipping their new building on Middle Street, which is expected will be in operation in a short time.

Pittsburgh, Pa.—The Standard Chain Co., the combine recently formed by the chain companies of the country, have finally placed in operation their new works at Rankin. The plant is a consolidation of the works of the Baker Chain and Wagon Iron Mfg. Co., of Allegheny, the Garland Chain Works, at Rankin, adjoining, and the Cleveland Chain Works. The building is iron, 300x200 feet. It will employ 300 workmen.

Port Jervis, N. Y.—R. H. Tracy, of New York City, has been appointed superintendent of the Jennings Saw Works in this village, to succeed George Griffin, who has been transferred to New York City.

Toledo, O.—The West Toledo Stove Works are preparing to enlarge their capacity to care for the large number of orders that are coming. The company now employ over 100 men.

Unionville, Conn.—The manufacturing plant of the Upton & Hart Co. has been sold at public auction. The property consists of four buildings with machinery therein suitable for the manufacture of cutlery and other like articles. Also certain water rights in Farmington river and personal property connected with the running of such mills.

### Recent Fires.

Elmira, N. Y.—The Clipper Chilled Plow Co.'s plant has been damaged by fire to the extent of \$40,000. The loss is covered by insurance. The cause of the conflagration is not known. The buildings were almost entirely destroyed. The concern was recently placed in the hands of the attorneys of a heavy creditor, M. H. Arnot, of this city.

Philadelphia, Pa.—A flame from a tinker's furnace, on the third floor of the tinware factory of Robert Porter Sons, at 609 North American Street, started a blaze which for a while menaced the building. The loss is estimated at \$5000.

St. Catharines, Ont.—The Chaplin Saw Works have been completely consumed by fire. Thousands of feet of prime lumber were consumed, and 50 men thrown out of employment. Loss at present unestimated.

### Recent Embarrassments.

Boston, Mass.—Charles H. Austin, brush manufacturer, has gone into bankruptcy. He owes about \$8946.30, and has nominal assets.

Greenfield, Mass.—The A. F. Towle & Son, silverware manufacturers, are unable to meet their obligations, and a meeting of its creditors has been held. The debts of the company are \$118,000, of which \$115,000 is due to the banks, and \$3000 for merchandise. The capital stock is \$150,000.

New York, N. Y.—Judge Brown, of the United States District Court, has granted a discharge in bankruptcy to Samuel Bernstein, formerly a manufacturer of gas stoves at 295 Pearl Street, whose liabilities were \$5778.

### Miscellaneous.

Canandaigua, N. Y.—The Robinson Chilled Plow Co. have just elected the following officers and directors: Directors, James McFeggan, Charles Caple, E. C. Robinson, R. R. Scott, Alexander Grieve, W. G. Dodds and James Park; president, James McFeggan; vice-president, W. G. Dodds; secretary, E. C. Robinson; treasurer, Alexander Grieve.

## BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

### New Companies, Agencies, Etc.

Bridgeport, Conn.—The Bridgeport Machine & Motor Co. has been incorporated with \$25,000 capital stock. Incorporators, A. B. Barkman, E. T. Brantigram, H. H. Brantigram and B. C. Hendrickson.

Charlestown, W. Va.—The Columbian Carbide Co. has been incorporated to manufacture calcium carbide and calcium carbide furnaces, with \$5,000,000 capital. Incorporators, James E. Campbell, of Hamilton, O.; A. O. Campbell, of Columbus, O.; D. Murphy, of Jersey City, N. J.; G. C. Adams and F. J. Patten, of New York City.

Chicago, Ill.—The Manson Cycle & Automobile Co. has been incorporated with \$2500 capital, to manufacture bicycles, automobiles and other vehicles.

Cleveland, O.—The Cleveland Distributing Co. has been organized in that city, and write that they are in the market for both cycle and automobile material. They report that they are incorporating with a capital of \$20,000, of which 25 per cent. will be paid in.

Dunkirk, Ind.—C. Craft.

Hamburg, Germany.—A limited liability company, with a capital of 100,000 marks, has been organized to import and handle bicycles made by the American Bicycle Co. F. Chr. Chandler figures as the manager of the new concern.

Jersey City, N. J.—The Diadem Mfg. Co. has been incorporated with \$100,000 capital, to deal in polishing compounds. Incorporators, P. Whitney, R. Dougherty and G. Willis.

Montreal, Can.—The Wright-Taper Roller Bearing Co. has been incorporated with \$300,000 capital, to acquire the patents of W. H. Wright for improvement in bearings applicable to bicycles and other vehicles. Incorporators, William Hamilton Wright, of Buffalo; A. C. Matthews, William B. Powell, R. C. Smith, Charles Ledoux and W. Laurie, all of Montreal.

### Changes and Improvements.

Akron, O.—John Gross, the Hardware man, has recently put in an extensive line of firearms and ammunition.

Atlantic Highlands, N. J.—William P. Irwin, who has conducted a repair shop for the past five years in connection with his Hardware business, has discontinued the bicycle business and will devote his entire attention to the other branch of his business.

Buffalo, N. Y.—The Lake City Cycle Co. partnership dissolved, A. R. Wheelock retiring and Joshua Conn continuing business under the old name.

Burlington, Vt.—Henry E. Spear will remove to Main street.

Chicago, Ill.—The A. Nelson Mfg.

Co. have purchased the business of J. B. Young, of that city, and will hereafter make and market the Young rim sprocket and crank extension in conjunction with the Nelson adjustable cone.

Chicago, Ill.—John Fanning, of the Fanning Mfg. Co., has purchased from the receiver of the Manson Cycle Co. the real estate formerly occupied by that concern, comprising the ground and three-story factory at the southeast corner of Superior and Morgan Streets, and the ground at the northwest corner of Pratt and Sangamon Streets, for \$13,500. The purchaser assumes encumbrances amounting to \$30,000.

Cortland, N. Y.—F. S. Bilven succeeds Kennedy Brothers.

Danvers, Mass.—F. A. Butler will add phonographs and supplies as side lines.

Detroit, Mich.—The Cooper Handle Bar Co. is reported to be moving to Fenton, Mich.

Elmira, N. Y.—P. A. Renton, 303 East Market Street, has sold his repair department to L. Mosher.

Gloucester, Mass.—The firm of Perkins & Corliss, bicycle dealers, has been dissolved by mutual consent. Fred A. Corliss will continue the business at the old stand on Middle Street, while John F. Perkins will open up a similar store elsewhere.

Hartford, Conn.—The trustees of the Worcester Cycle Co. have turned over to the New York Vehicle Co. the two big brick factories which were formerly used by the first company for the manufacture of bicycles, and it is understood the New York company will begin fitting them up at once for immediate operation.

Haverhill, Mass.—George Durgin's store is being renovated.

Homer, N. Y.—Radway & Quick succeed F. S. Bilven.

Hosper, Ia.—John DeBruin succeeds DeBruin & DeLong.

Ipswich, Mass.—E. E. Currier is having an addition built.

Kingston, Wis.—H. Heft succeeds A. E. Vinz.

Los Angeles, Cal.—Haupt, Svade & Co., 604 South Broadway, have sold out to W. H. Whitesell, who will continue business as the Columbia Cyclery.

Middletown, Conn.—The formal transfer of the Middletown, Conn., property of the Worcester Cycle Mfg. Co. to the American Surety Co. has been made. The property is now in the full possession of the latter company and by them will be passed over to the New York Motor Vehicle Co.

Nashua, N. H.—Lintott & Bushwell have removed from Railroad Square to basement of the First Baptist Church.

Newburgh, N. Y.—The Queen City Supply Co. succeed H. C. Stirling; change of name only.

Orange, Mass.—Grout Bros., manufac-

turers of motor carriages, have begun an addition to their factory. The new part will be like the main building, of brick, 200x40 feet and two stories high. This addition doubles the floor space of the plant. The equipment will also include a new engine.

Orange, N. J.—W. F. Foth succeeds Foth Bros.

Oswego, N. Y.—Edward H. Strong is now sole proprietor of Strong's sporting goods house, having purchased the interest of his brother, William.

Rockland, Mass.—The bicycle factory on Market Street has been closed and the stock moved to Abington.

Ryan, I. T.—Smith & Mulcock; Jas. K. Mulcock has sold his interest.

Sardinia, Ind.—L. A. Arbuckle has sold out.

Swanton, Vt.—The Robin Hood Powder Co.'s new cartridge factory has received its machinery, and work will soon be begun.

St. Louis, Mo.—The business of the Shapleigh Hardware Co. will be further extended, now that the business of the J. H. Neustadt Cycle Supply Co., of the same city, has been absorbed. The entire stock and good will of the latter concern were purchased.

Stockton, Cal.—Arthur Wright succeeds Crump & Seybold.

Trafalgar, Ind.—Richardson & Gray succeed J. T. Paskins.

Trenton, N. J.—John Howard, North Broad Street, will remove to Hanover Street.

Trenton, N. J.—The Howard Supply Co. has closed its bicycle department.

Waterville, O.—Wilkin, Landon & Patrick succeed Weibling & Patrick.

Whiting, Kan.—Bender & Jackman succeed Bender & Woods.

### Recent Embarrassments.

Doylestown, Pa.—The Winslow Motor Carriage Co., adjudged involuntary bankrupt in the United States District Court, Philadelphia.

Indianapolis, Ind.—An involuntary petition in bankruptcy has been filed on behalf of the Outing Mfg. Co., which assigned a short time ago.

Yorkville, S. C.—Petition in bankruptcy has been filed by C. Cousins.

Columbian 1000-Shot Air Rifle.

Patented  
Oct.  
24, 1893.

CHAMPION  
MODEL.

This Air Rifle possesses advantages over all the Air Rifles now  
on the market. The materials used in its construction are  
the best. The appearance and workmanship is far ahead of  
any other Air Rifle made. It has an adjustable sight it shoots stronger  
and more accurate, less liable than any other to get out of order, all  
parts are interchangeable. We think we have the right to claim this as  
the "Champion" of all Air Rifles. List, per doz., Enameled, \$30.00; Full Nickel, \$42.00.

know that the makers of

## GOODYEAR TIRES

are finish fighters.

Be on the winning side and handle our  
tires. There is profit in them.

THE GOODYEAR TIRE & RUBBER CO., Akron, O.

## PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

## If it is a Food Chopper Without a Lid, Don't Buy It.

A distinguishing and exclusive feature of the STAR FOOD CHOPPER is a plate hinged at the top of the hopper which, when pressed on the food to be cut, forces it upon the feed screw, thus preventing the possibility of injuring or soiling the fingers, which is liable to occur in using the other choppers.

The STAR is unquestionably the best machine of its kind ever offered to the public. It will cut without crushing raw or cooked meat, sea food, fruit, vegetables, etc., into coarse or fine pieces, according to the cutter used, of which three accompany each chopper.

It has eliminated all the objectionable features of other choppers, and has added several improvements that are distinctly its own. It is always in order, and the knives require no sharpening.

No other chopper has the many merits of the STAR. None is more simple in construction or easier to understand or clean. From start to finish in the small points as well as in the large, the STAR FOOD CHOPPER is the best.

**CHAS. D. BROWN, Agent,**

**160-162 Duane Street, New York City.**

## "SIMPLICITY." STUDENT LAMP.

A One Hundred Candle-Power Light for Six Hours' Service One Cent. The illuminant is gasoline, stored in compartments in the lighting fixtures, and on passing through a heating chamber reaches the orifice in the form of gas, which burns with a smokeless flame under a mantle heated to incandescence. The light is not affected by temperature, and will burn equally well in summer or winter. The lamp uses 74° stove gasoline, and is started by heating the burner with a small alcohol torch, supplied with each light. There is no odor like the old gasoline stove.

These lamps have been approved by the Board of Underwriters of Chicago.

Covered by eight patents in the United States and Canada. Ask for catalogue of complete line of lamps and our

# CHATILLON SPRING SCALES.

OUR attention having been called to the fact that inferior makes of Spring Scales are being sold to butchers as "Chatillon" Scales, we deem it due to the trade and to ourselves, in order to protect the merits of our Spring Scales, so well and favorably known for more than sixty years, to inform you that every Spring Scale manufactured by us

has our name as makers plainly on the dial, thus:

and any scale without this name on the dial is NOT A GENUINE CHATILLON SCALE.

## FOSTER BROS.' BUTCHER KNIVES, CLEAVERS, STEELS, ETC.

Write for prices and catalogue of thirty-one different punches. We are the largest manufacturers in the world of Ticket and Conductors' Punches.

Manufacturers of  
Conductors' and Ticket Punches,  
Sifters, Fly Traps, Cages and  
Wire Goods of every description.

## WHY IS THE

PAT. 1898.

## O.K. WASHING MACHINE? BECAUSE

- 1.—It is the only Rotary washer that has Revolving Steel Ball Gearing, reducing the friction and thus making machine so light running and almost noiseless.
- 2.—The tub is made of Louisiana Red Cypress Lumber.
- 3.—The wheel turns right or left, pin wheel or dasher reverses automatically, turning the clothes back and forth through the hot soap-suds, and cleaning them without rubbing them to pieces.
- 4.—This washer is made by experienced mechanics, and will out-last any other washer on the market.
- 5.—The lid on tub closes tight, no escape of steam.
- 6.—Has a solid wringer box with iron brackets.

Manufactured by H. F. BRAMMER MFG. CO.,  
DAVENPORT, IOWA.

AGENCY **JOSEPH RODGERS & SONS, LTD.**

**THE BEST IS EVER AND ALWAYS CHEAPEST.**

The merchant can recommend with confidence.
